

MILLENIUM PREFACE

The Cosmic Doctrine is a condensed blueprint outline of God's manifestation in this creation. Complex indeed! But what has tended to bother some about the Cosmic Doctrine teaching has been the almost total emphasis in explaining evolution simply as being the psychic nuts and bolts of God. Leaving one with the impression that God may be reduced from a Great and Infinite Being to a kind of mechanical

Newtonian clockwork. However there is much more to it than that. The higher up the planes you go, although esoteric theory tends to describe it as all more abstract, in actual fact things become so much more complex, vibrant, vivid, bursting, and brimming with life in incredible profusion. It is another form

of experience however. The broadest, though simple, analogy would be to liken the existence on the higher levels as something after the order of a Bach fugue - which could indeed seem to some a rather dry abstraction, but which to the attuned and educated ear is a revelation of divinity, harmony and

celestial order. The reality is not easy to describe in concepts, let alone in words. How best to describe a rainbow to a blind man?

CONTENTS.

Introduction By Dion Fortune

Section I.

THE EVOLUTION OF THE COSMOS.

- Chapter 1. The First Manifestation
- Chapter 2. The First Trinity.
- Chapter 3. The Building of the Atom.
- Chapter 4. The Evolution of the Atom.
- Chapter 5. The Genesis of a Solar System.
- Chapter 6. Cosmic Influences on a Solar System.

Section II.

THE EVOLUTION OF THE LOGOS AND HIS REGENTS.

- Chapter 7. The Evolution of a Great Entity.
- Chapter 8. The Relation of a Great Entity to the Cosmos.
- Chapter 9. The Projection of the Concept of the Universe.
- Chapter 10. The Relation between the Projected Image and the Logoidal Consciousness.
- Chapter 11. Auto-reactions and Cosmic Memory.
- Chapter 12. The Birth of consciousness in the Universe.
- Chapter 13. The Beginnings of Mind and Group Consciousness.
- Chapter 14. The Seed-atom Building a Seventh Plane Body.
- Chapter 15. Evolution of the First Planetary Form.
- Chapter 16. Evolution of the Lords of Flame, Form and Mind.
- Chapter 17. The Influence of the Regents upon the Globes.
- Chapter 18. The Goal of Evolution of a Life Swarm.

Section III.

INFLUENCES UNDER WHICH THE EVOLUTION OF HUMANITY IS CONDUCTED.

- Chapter 19. Tabulated Summary of Influences.
- Chapter 20. Cosmic Influences.
- Chapter 21. The Logoidal Relation to the Manifested Universe.
- Chapter 22. Influences of the Manifested Universe.
- Chapter 23. Teaching Concerning Other Evolutions inhabiting a Planet Simultaneously.
- Chapter 24. Influences which Humanity exerts upon Itself.
- Chapter 25. The Law of Action and Reaction.
- Chapter 26. The Law of Limitation.
- Chapter 27. The Law of Seven Deaths.
- Chapter 28. The Law of Impactation, or the Transmission of Action from one Plane to another.
- Chapter 29. The Law of the Aspects of Force, or Polarity.
- Chapter 30. The Law of the Attraction of Outer Space.
- Chapter 31. The Law of the Attraction of the Center.

Section 1.

Chapter I.

The First Manifestation.

Knowledge falls into two divisions - the record of facts and the explanation thereof. Knowledge can only consist of that which is present in the mind. That which does not enter the mind cannot be known. Therefore you can only know that which you have senses to interpret to you. As new senses open up, more planes of existence can be known. There is, however, a limit to the knowledge of the finite. Perception ceases at the barrier of manifestation. Of that which lies beyond we can only know by analogy.

The Unmanifest is pure existence. We cannot say of It that it is Not. Although it is not manifest it Is. It is the source from which all arises. It is the only 'Reality'. It alone is substance. It alone is stable. All else is an appearance and a becoming. Of this Unmanifest we can only say IT IS. IT is the verb 'to be' turned back upon itself. IT is a state of pure 'being' without qualities and without history. All we can say of IT is that it is not anything that we know, for if we know anything it must be in manifestation for us to know it, and if it is in manifestation it is not unmanifest. Therefore the very fact that we can know it proves that it is not unmanifest. The Unmanifest is the Great Negation; at the same time it is the infinite potentiality which has not occurred. It is best conceived of under the image of inter-stellar space.

In the occult teachings you have been given certain images, under which you are instructed to think of certain things. These images are not descriptive but symbolic, and are designed to train the mind, not inform it. Therefore you may think of the Unmanifest as inter-stellar space; and of the Logos as a Sun surrounded by His Solar System of Planets and of the emanations of the Logos as Rays. The Unmanifest is the only Unity. Manifestation begins when duality occurs. The prime duality is 'Space' and 'Movement'. The first manifestation was a current in space. The metaphor I must use may convey nothing to your mind. All I can say is that space was moving. You will find these clues are a clue to much.

Now when space moves it has this peculiar quality - being frictionless it never loses momentum but continues to flow.

When space moves two forces are at work:- (a) The force which causes it to move, being the desire of space for momentum.(b) The force which had hitherto caused it not to move, being the desire of space for inertia. These two factors are present in all motion, but the desire for movement, being the stronger, overcomes the desire for inertia, and the desire for inertia

continues as a check upon the movement. Therefore the movement is pulled upon slightly. That is why there is no such thing as a straight line in the Cosmos. All movement therefore has a slight curve in its projection, therefore eventually it returns to the spot whence it started, and forms a spinning ring.

Now the prime movement is just a flowing of space that returns after long eons whence it started, and then renews its journey. This sets up a spinning belt of enormous circumference. This belt spins on one plane for immense eons of time; spins with a changeless spinning. But its tendency is to communicate its motion to the space about it, which leads more space to flow into the spinning (all this, remember, is metaphor). The spinning in one plane continues until the stresses which it generates evoke a new movement, and a second current in space is set up at right angles to the first, and the same process is repeated. These spinning planes of force may be conceived of as resembling the Rings of Saturn. We have now two spinning planes which, at two points cut each other, and it is worthy of note that the second plane forms outside the first and is therefore larger in diameter. For countless eons these planes spin at right angles to each other, and the whole of evolution turns upon the difference in size between the planes. When the larger has got up to the same speed as the smaller and older, it commences to attract one aspect of it, the consequence being that the older circle is drawn towards the newer.

Now the first circle must be conceived of as having an upper and a lower surface. The upper surface of the outflowing arc may be conceived of as positive and the lower as negative. The reverse being the case in the inflowing arc. Likewise with the second circle to arise. These circles are mutually attracting and repelling each other; so that you conceive the upper surface of the outflowing arc of the first circle, being positive, rising up towards its corresponding aspect in the second circle, and the lower circle in the returning arc pressing downwards, so that you get a second movement imparted to the spinning disc. When this secondary movement has completed its first circuit and set up its steady revolution, the new Cosmos is in being. That is the prime beginning of a Cosmos expressed in the nearest approximate metaphor.

The secondary spin of the first circuit is the Ring-Pass-Not, and the circuit of the second formation is that sphere which sets a bound to Chaos. On the outer sphere there is a secondary derivation, and though a spinning circle of motion, represents for that Cosmos, the prime stillness, - the immobility in which it is rooted; - it is the thrust-block of the force of the Cosmos, that which resists, which alone enables momentum to be achieved and you may call it the Ring-Chaos the prime evil. It is evolved from the reaction of the prime force in order to take its thrust. It spins at right angles to the prime spin. It counteracts it. It was the attraction of the Ring-Chaos inducing a secondary spin in the Ring-Cosmos which forms the Ring-Pass-Not.

Now that movement in the Ring-Cosmos, spinning in one plane and rotating while it spins as if upon an axis, sets the bounds beyond which the creatures of that universe cannot pass, even in thought. But this universe is a sphere encircled by two lines of force - the Ring-Cosmos and the Ring Chaos - rotating at right angles to each other. The momentum of the Ring-Cosmos is the source of force from which evolution draws its momentum; and the rotation of the Ring-Chaos is the source of force from which dissolution draws its power.

Evolution is a thrust from the surface towards the center. Devolution, or Dissolution is a suction into outer space. The Ring-Chaos does not belong to the universe it encircles, but to outer space. That is an important point in connection with it. The Ring-Cosmos has its desires turned towards the sphere it encircles.

The Ring-Chaos has its desires turned towards the space that encircles it. The Ring-Cosmos seeks to extend the center. The Ring-Chaos seeks to expand the circumference. The Ring-Cosmos tends to solidify by contraction. The Ring-Chaos to return to the Unmanifest, whence it arose, and therefore, if its influence were unchecked, to reduce the universe it encircles to nothingness. The Ring-Cosmos, if its influence were unchecked, would be static in the immediate present. These two influences are the source of all the force in the Cosmos - The Ring-Cosmos because it concretes - builds up. The Ring-Chaos because it diffuses - never grows.

Now these two Rings we will call Good and Evil; Life and Death; Light and Darkness; Spirit and

Matter; Being and Not-Being; God and Devil; because each of these potencies has its root in its respective Ring. But let it be clearly conceived that the Ring "Good" and the Ring "Evil" are not good and evil as you understand them, but merely spinning circles of force at right angles to each other, and therefore in opposition, and it is merely the angle of the first to arise which is called "good" and the angle in opposition to the prime plane is called "evil" and it might well be that in another Cosmos the first plane would begin to spin at another angle - the angle of your "evil", it would still be "good" to its Cosmos, because "good" and "evil" do not depend upon any plane or angle, but are simply relative to each other. The first force to arise is called "good" because, from it arises the line of force called evolution. All subsequent secondary forces are measured by that standard. In so far as they move in the same angle they are reckoned to be "good". In so far as they approach to a right angle they are reckoned to be in opposition and are called "evil". Evil is simply that which is moving in the opposite direction to evolution. Evil is that which approaches the plane of movement of the Ring-Chaos and therefore tends to revert to the Unmanifest. All evil that builds up with a universe is attracted towards the Ring-Chaos and is self-destroyed, because the very name "evil" means a force which tends to non-existence.

So you can conceive of evil under two aspects:- (a) That which enables you to lock up the forces of good by opposition, and so secure stability - a foot-hold. Evil enables you to get a purchase on space. (b) Evil, if allowed to function unopposed, is the 'Scavenger of the Gods' therefore said the Great One, our Master, "resist not evil". When you resist evil you lock up good. You lock up the force of good which holds the evil inert. This serves no useful purpose, unless you have a superabundance of good which shall stand upon the platform thus formed and leap up from it to greater heights. Therefore it is not enough to meet hate with love - evil with good. This is the course of the ignorant and the reason why esoteric religion has made so little impression in the world. You must hate with hate sufficiently to cause a locking up of the force. You must hate the hate and, having rendered evil inert by opposition, the love can take its stand upon the firm platform and use it as a thrust-block.

Therefore you only oppose evil when you wish to do constructive work - when you wish to make something new. You never oppose the evil when you wish to destroy. You make a vacuum round it. You prevent opposition from touching it. Then, being unopposed, it is free to follow the law of its own nature, which is, to join the motion of the Ring-Chaos. It, therefore, passes out to the periphery of the universe until it meets the spin of the Ring-Pass-Not which it cannot get through, but it has gone to a place of such primitive simplicity that it is resolved into its own elements, and these elements are drawn into the attraction of the nearest motion, which is the nature of the Ring-Cosmos, which is the nature of good.

Therefore evil, when unopposed, resolves itself into the undifferentiated raw material of existence - the first form of manifestation. It ceases to be organized. It ceases to have qualities. It starts afresh at the beginning, transmuted through neutrality into good. It is the spin of these two Rings which give the influences that play upon creation. You are now in a position to know why the mystery of evil is the secret of the initiates, because when you understand evil it is exceedingly useful. But the undisciplined man, if he knew the usefulness and goodness of evil, would use it dynamically on the positive side of its manifestation, not statically by availing himself of its negative qualities as does the Initiate.

You see, it is a matter of geometry. That is why numbers are so important, and remember, numbers in occultism refer to the degrees of angles. The degrees of the numbers of White occultism are marked in the Ring-Cosmos. The degrees of the numbers of evil are marked in the Ring-Chaos. Always think of the number in referring to the degree of an angle of two intersecting lines of force, and remember that when you operate on more than one plane you get the angles of the intersecting of the planes. You will have more instruction about that. Every plane has three Rings, like the Cosmos. Also you can get intersections between different types of movement like Time and Space. These things will be studied later.

Chapter II. The First Trinity.

You have found, no doubt, that the teaching is abstruse and unfamiliar. Believe me it is more difficult to give than to receive, for that which is described so greatly transcends the condition upon which language has been built up, that the very images have to be built in your consciousness before they can be evoked by any spoken word.

You have to conceive of the Cosmos, in its primal aspect, as consisting of three spinning movements. All that is nothing but movement - movement in space - pure movement. For the prime movement which gives rise to all that is, commences before there is anything to move. The Cosmos then, is bounded by that movement which is called the Ring-Pass-Not. But besides the Ring-Pass-Not there are movements in two directions. There are the Ring Cosmos and Chaos - good and evil, and they are the sources of the forces which are known to you by these names. But though these forces influence that which is within the Ring-Pass-Not, they cannot pass beyond it.

These three Rings are the three 'primaries' of the Cosmos - the first Trinity, that is why the Supreme Being is always conceived of as a Trinity; and three is the fundamental number.

Everything in the end is reducible to these three influences. Whatever subsequent stresses arise may be analyzed into the balancing of these three forces:-

- (a) The force of the Ring-Cosmos which tends towards the center.
- (b) The force of the Ring-Chaos which tends towards outer space.
- (c) The force of the Ring-Pass-Not which holds the balance between them and prevents either of these forces from going to extremes.

The Ring-Pass-Not, however, is derived from the Ring Cosmos and therefore partakes of its nature rather than of that of the Ring-Chaos.

The Ring-Chaos must always be thought of as having its affinity with the outer space of the Unmanifest, and a tendency to return to unmanifestation. It looks towards the past, and ever seeks the conditions of the past. The Ring-Cosmos endeavors to focus, as the Ring-Chaos endeavors to diffuse. The tendency of the Ring-Cosmos is towards the future.

The Ring-Chaos can never build anything, because whatever forces it may originate diffuse, unconfined, into outer space, but the Ring-Cosmos, in conjunction with the Ring-Pass-Not conserve its forces. For the forces which the Ring-Cosmos radiated into that space within its circumference cannot pass out again because they are confined by the influences of the Ring-Pass-Not. Therefore they act and interact among themselves producing ever greater and greater elaboration of influences.

Let us now return to the point in Time when the Ring-Pass-Not had completed its first revolution and the Cosmos is in being. Any form of force, when it has reached the maximum momentum of its type of movement, gives rise to the secondary movements which serve to carry off the excess of force which it is generating, for force begets force when moving under frictionless conditions.

The prime activity is MOVEMENT.

The secondary activity is LIGHT.

The third activity is SOUND.

The movement of the Ring-Cosmos sets up secondary swirls within the area of its influence, its tendency is to draw more and more space into its spin. It cannot extend itself externally because it is limited by the sphere of the Ring-Pass-Not, it therefore extends itself internally, so that the spinning belt finally becomes a spinning disc with the center immobile.

The spinning disc, being rotated by the secondary movement, which is the Ring-Pass-Not, becomes the spinning sphere. The interaction of the two forms of movement is naturally neutralizing, consequently there is a break-up of the simple movement of the disc into a series of compromises.

The chief point of activity ceases to be the circumference and becomes the center. Although the Ring-Cosmos, the Ring-Chaos and the Ring-Pass-Not each continue on one plane, and spin in their own place, the synthesis of their movements give rise to a series of revolving radii. These radii are

the Rays.

You must conceive of them as a series of spinning rings linking center to circumference and see:-

- (a) The influence of the Ring-Chaos in the force which causes the out-going current to flow towards the periphery.
- (b) The influence of the Ring-Cosmos in the force which causes the current to flow towards the center.
- (c) The center is the synthesis of all the forces and the balancing of them.

It will be perceived then that upon the Cosmic plane the Rays give rise to the Central Sun.

We have now arrived at a point when, in addition to the three great 'primaries', which are strictly external to the Cosmos they have generated, we have a purely Cosmic movement, the movement of the flowing Rays, the Rays that flow out and return. Now these Rays, these circular Rays, which are reflected back from the Ring-Pass-Not, must be thought of in pairs, each one being in special association with its opposite number, so that the true movement is a figure of eight, the out-going flow being above in one half of the circle, and below in the opposite half. Herein is a very deep truth closely related to practical occultism.

These new movements set up stresses among themselves which give rise to a series of concentric rings of movement, so that the Cosmos becomes divided up into segments of influence. The movements of the spinning Rays and the concentric circles are known as the 'Great Secondaries'. There are twelve Rays and seven concentric circles. Within the segments are set up the movements which are known as 'Tangentials'. The nearest analogy to these is the Brownian movement of atoms. The intersecting of the Rings and the Rays giving rise to angles, and the sharp tangential movement thus occasioned introduces a new factor into the Cosmos.

You now perceive that we have studied three types of movement:

- (a) The interaction of the primal Rings.
- (b) The interaction of the secondary Rays and Circles.
- (c) The Tangential movements occasioned by the opposition of the angles and the secondaries.

In these tangential movements the lines of force are continually crossing each other's paths, being confined to small segments of the Cosmos. Where they cross the Vortex is set up by the opposing influences modifying each others actions. There, instead of proceeding in these slight curves, which give rise to enormous circles, they are deflected into a new movement and gyrating about each other become relatively static, thus setting up a composite unit - two forces which no longer are influenced independently by the attractions of greater forces, but are influenced together. Thus are atoms formed. Two intersecting forces setting up a vortex and gyrating about each other, instead of circling the limits of the Cosmos.

I have described the formation of the 'prime atom'. These atoms, acting as units likewise perceive the attraction of the units about them and begin to move in their turn, and the same process occurs again. Atoms in movement meet and gyrate and so the process is continued. The tendency of the Composite atoms is to travel towards the periphery, and of the simple atoms to remain near the center. It is thus that the planes of Cosmic matter are developed.

So that, to recapitulate., we have:-

1. The primary movement of the Rings.
2. The secondary movement of the Rays.
3. The tertiary movement of the Tangentials within the segments.
4. The quaternary movement of the vortices.
5. The quintecular movement of the composite atoms.

You will meet these numbers again.

One refers to The Absolute.

Two " " The Manifest.

Three " " Evolution.

Four " " Form.

Five " " Life.

5.

Chapter III. The Building of the Atom.

You have had described to you the types of movement which make up the Cosmos. The primary Rings, the Rays and the secondary Circles. Now these are the basis of a Cosmos, and their influences are the underlying influences of that Cosmos. Their revolution, it is, which make the great cycles the days and nights of manifestation. A Day being the time when an aspect of the Cosmos is within what you would call, the positive area of the magnetic field generated by the spinning Rings; and the Night when it is in the negative area.

By a knowledge of these Cosmic Tides the 'illuminated' may avail himself of their forces, hence the power of a knowledge of the Numbers of the Secret Calendar. These then are the primary influences; they may be thought of as the framework of the Cosmos. The Tangential forces, within the segments of their interaction, set up vortices, and these vortices are the primal atoms.

You may perceive that in the building of an atom the same laws are at work as enabled the Ring-Cosmos and the Ring-Chaos to build the Cosmos. It is the law of the opposing forces which produce stability.

The opposing forces, having produced atoms, the atoms themselves become forces, because they move in their turn, and so different types of Tangential reactions occur; movements influenced by more than one attraction. So that, from the simple right-angled movement, produced by a single opposing force, vortices are described of a polyhedral type. You can see the material form of such reaction in the different types of crystals to which they give rise upon your plane. So that you will get atoms, the Tangential path of whose component forces can be anything from a three sided figure upwards.

You must realize clearly that the primal atom consists of two opposing movements which gyrate about each other. These are simply vortices, but the vortices can move through space as a water-spout can move over the ocean, and these vortices can be induced to assume a secondary movement. It is these secondary movements which I refer to as being of an angular path.

So you will get the different types of atom, which is merely a spinning to the spinning atom, which moves in a triangle; the type which makes a square; the type which describes a five sided figure; and a six sided figure etc. These atoms attract each other, and can draw together and adhere to each other by means of what, metaphorically speaking, I will call the facets of their orbits. Thereby they can form alliances among themselves.

Thus different types of atoms arise in the Cosmos and begin to gather themselves together into composite bodies. Each composite body, as it increases in size increases also its power of attraction, so that the tendency of the Cosmos is to aggregation, and the aggregates form adjustments amongst themselves so that new forces arise periodically. These we shall consider in their turn.

You will perceive that we have now described, in addition to the great Ring forces of the Cosmos, the formation of an infinite number of minute centers of stability of varying types, and the continued organization of the reactions among these centers.

You will perceive that great phases would be gone through in the course of this evolution, for each new force that arose had to radiate out through the entire Cosmos until turned back in its course by the Ring-Pass-Not, and it would only be after it had returned from whence it arose, and so completed its circle, that it could become a constant influence with the Cosmos.

Within the limits of the Rays and the Circles the newly built atoms would cannon and rebound for eons before any co-ordination would be induced among them. But as chance would govern the occurrence of two or more moving parallel to each other, where this occurred their forces would reinforce each other and draw yet more into the orbit of their activity, so that the mere rebound would give place to the ordered recurrence of influences, and therefore to definite paths. There are already worked out in the Cosmos the great lines of force which we call the Rays, and the currents of the Rays would gradually influence the great oceans of rebounding atoms to flow in their track. So that gradually the uncoordinated forces are co-ordinated into the great tides of the Cosmos, and through meeting their own tangential action, move also with the great

tides.

I am now going to put before you a concept which may seem strange to you, but which is the basis of much in practical occultism. At the beginning of these teachings I said to you "space moved".

Whenever a movement has occurred in space the flowing action thus set up remains. Space, when set in motion, never stops flowing because it is frictionless. A force has been generated which remains. This force may be blended with other forces, so that for all practical purposes it ceases to be a separate unit, yet it still retains its original character, and, could you analyze the unit of which it forms a part, you would find it there intact.

Remember this point, - space, set in motion, flows for ever. Thus supposing, metaphorically speaking, you move your pen across the paper one inch, that movement would give rise to a current in space which would flow in its positive form in one aspect of the movement, and return in its negative form in its other aspect. That would remain, and whosoever could discern that movement in space, could discern the action which gave rise to it. This is the basis of memory, and this is the reason that it is easier to repeat a movement which has been performed before, and the more often it has been performed the easier is the repetition, because the momentum of space is cumulative and will avail to carry the movement in its current. You will find this explains much.

You have had spread before you a Cosmos which arose out of space through movement, and which is movement and nothing else; you have seen how the stresses of forces generated by these movements have given rise to an infinite number of vortices, built upon exactly the same principle as the Great Vortex which is the Cosmos, because the same laws hold good upon every scale of manifestation, being laws of relationship. You will then see that relationship occurs between the new centers of force thus built, and they tend to form new Cosmoi among themselves, built upon the same principles.

Dances of atoms give rise to new Rings-Cosmos and the story begins again. But these new universes, as they are called, while they have the same laws as the Cosmos before described, are also influenced by that framework of the Cosmos which was built before they began, and you will find that this law holds good throughout all manifestation.

Chapter IV. The Evolution of the Atom.

We will recapitulate the teaching in relation the Rays, the Circles and the vortices. The Rays and the Circles are part of the primary movement of the Cosmos. These, together with the Rings, remain constant in the Cosmos and are referred to as the Cosmic currents.

The vortices are of another nature. The primary movements are circular, the vortices start as straight movements which, encountering opposition, assume a secondary circular movement. There is therefore always a pair of forces concerned in the creation of the primal atom, and this fundamental duality extends into all combinations of which the atom is the base. You will observe that whenever a particular sequence or series of units occur in the rhythmical functioning of a movement, that this series acts as the conditioning frame of whatever subsequent elaborations and combinations may be built up upon that foundation.

For instance supposing a prime movement of an atom to be a three-sided tangential, A to B, B to C, and C back to A; whatever secondary movements may arise (and remember this, that movement in a straight line is never maintained after the original impulse dies away) conflicting forces reduce it to a modification of the primal circular, so that the atom, which in its movement originally pursued a triangular course, will finally arrive at a movement consisting of three spirals arranged in a triangle.

Each spiral movement will be executed under the conditions governing the A - B segment, then the B - C segment, then the C - A segment. Therefore, if you knew what the influences were, you would know the nature of the primary movement underlying the spiral which appears only to the superficial observer. This is the principle underlying Astrology, and this is the reason why the Science of Numbers plays an important part in all practical applications of Cosmic principles.

The prime movement of an atom is a Vortex - nothing else, a mere spinning round a core of motionless vacuum. The atom you have seen described is not a prime atom but an elaborate and complex structure. It is only when the prime atoms combine together that such secondary movements are set up.

Now an atom which is of a triangular structure, can form units with as many other atoms as it has facets. When each facet has become attached to an atom the group is complete and has attained a state of equilibrium of stress within itself. It can no longer grow by accretion but must act as an unit, and can only enter into association with other units of like type whose angles of stress are similar.

The prime atom, as I have said, is a simple vortex, and the composite atoms of different types arise according to the number of tangential angles into which the circumstances of counter influences may draw the vortices. The vortices, be it noted, first arise in the angles where the Rays converge upon the central stillness. It is the close juxtaposition of forces which set up the secondary currents. Therefore in the sphere which surrounds the central stillness are to be found the primal atoms. These however soon take on the secondary tangential movement and thus form alliances among themselves, as before described.

As you have already been told, in addition to the movement of the Rays there is the movement of the Circles about the Central Sun. This movement gives rise to centrifugal action, and the atoms tend to swing out towards the periphery. The more complex the atom the more strongly will it feel the centrifugal action, so that you will find that the Circles contain atoms of gradually increasing complexity as they succeed one another. These atoms, arising in the angles of the Rays, when they feel the influence of the centrifugal force, go out along the line of a Ray. Each atom then, has in itself forces of two Rays which set up the primal vortex and then goes out along the path of one of these Rays.

Evolution upon the Cosmic planes may first be observed as the gradual filling of the circle of space with atoms; infinite eons passing in the process. Thus the prime atoms occupy circle One. The first form of composites - circle Two; combinations of these composites - circle Three and so on.

Now these types of matter, which we may call them, are thus spread in concentric spheres throughout the Cosmos, out to the limit of the Ring-Pass-Not, going out along the lines of the Rays, so that while the first circle contains only atoms of its own type, each succeeding circle has in its atom, inter atomic movements representative of each of the inner circles. The construction of the outermost atoms being very elaborate. When the atoms reach the outermost sphere a fresh force sets in; they have encountered the opposition of the Ring-Pass-Not. I may say in parenthesis, that the atoms of each plane form units among themselves by aggregation, thus an atom, shall we say, of the 3rd plane or circle (they are the same thing in other words, 'circle' is usually reserved for the Cosmic) forms union by means of its facets. Anything from a triangular figure upwards of its aggregate atoms, in exactly the same way as previously described in regard to the primal atoms. Therefore the atoms in the outermost circle are an exceedingly complex system of movements within movements.

Having gone out from the central stillness with a centrifugal force, they are now rebuffed by the Ring-Pass-Not, and, owing to the rebuff, return with a spiral movement. This it is which lends its peculiar formation to the Rays. Having reached the center they then speed outwards with a straight centrifugal motion along the line of the opposite Ray to the one by which they entered the center, to return again in the same way, but at a slightly different angle, which will cause them, upon the next outgoing path, to follow the next Ray to the preceding one, and so they work their way round the circle. When repulsed by the Ring-Pass-Not, they make a circular movement upon the plane of the outermost circle, thus feeling its forces from all angles. They repeat this movement upon each plane as they return.

Now as you have already been told, each movement in space continues as a movement, therefore every influence that plays upon these atoms is registered in the reaction of stresses within their structure, so that each atom returns to the central stillness infinitely more complex after each journey; each Ray, intersecting the circles at a different angle, causes the atom traveling upon its

path, to experience different influences on its journey, therefore the final complexity of these atoms, when the complete circuit has been described, though it is capable of mathematical expression cannot be conveyed by the finite intellect. But could you grasp the geometry of these planes, could you know their numerical calculus, you would hold the key to the universe.

These structures are still referred to as atoms, not, as in the case of chemistry, on the hypothesis that they cannot be resolved into any simpler structure, being homogeneous, but on the basis that, though composite, when once formed they cannot be resolved at all, but are permanent units. It will thus be seen that the flowing out of the atoms to the circumference and their return to the circle marks a phase of evolution of the Cosmos. And the completion of the circuit of the Rays by an atom marks a phase of evolution of that atom. When it has completed this circuit it has experienced all the forces that the Cosmos can offer it, and when all the atoms evolved have completed the circuit (and the evolution of atoms upon such tide is limited, because after a certain proportion of force has taken up a tangential form a state of equilibrium is reached within the Cosmos) evolution proceeds from the first movement to a state of uncompensated force until equilibrium is reached - this is the completion of an evolution - a state of equilibrium, and therefore a relative stillness.

You will observe that we have now described three phases of Cosmic evolution. The development of the Rings was the first phase. They gave rise to each other, and acted and reacted on each other till a state of equilibrium was reached. Then, though they were static in relation to each other, that is to say though in constant movement within themselves, they maintained their relationship constant towards each other and must continue ever so to do since there is nothing to disturb them.

The vortices, set up by the movements, however, give rise to secondary movements - the Rays and the Circles - and these, starting upon their respective courses developed them until they also became static in relation to each other, and a second stage of evolution was passed through. These likewise in their turn, gave rise to the tertial movements which built the atoms. It will thus be seen that a phase of development is succeeded by a phase of equilibrium during which that which has been developed is maintained, but nothing becomes, its status is unchanged. These stages may be known to you under the names of the Days and Nights of Brahma - the Day of evolution - the Night of static balance - and then the overcoming of one set of forces by another, which causes the balance slowly to dip into manifestation again. The equilibrium is then over, and new forces are set going. These forces are based upon the relationships of the units previously built up and are influenced by these prime determinants - the Rings, the Rays and the Circles. Within these limits, and subject to the nature of the units upon which they act, they form fresh combinations, permutations, and rhythms of action and reaction, until the new forces have found their equilibrium; and in their utmost completion and development when the final combination has been achieved, they again become static in the Cosmic balance until such period as the balance may again be upset.

The over setting of the balance is due to the same forces as set up the primal Rings - the fact that movement generated movement and sets up a sphere of swirl outside its own path. That is why, though every fresh set of forces set in movement must attain to a final equilibrium determined by the factors of their natures, such an equilibrium being only a maintaining of position of movements relative one to another being therefore a relative stillness, must always overbalance and fly out into a new phase of evolution because it is a Cosmos and built of movement - movement generates movement.

Chapter V. The Genesis of a Solar System.

You have got, I think, a clear concept of what has been called the framework of the Cosmos - the Rings, the Rays and the Circles. These having long since completed their evolution, have settled down to a static condition, the only change which occurs being that of the Ring-Cosmos passing through the positive and negative spheres of influences - four to the cycle.

These make great phases - the phase when the constructive influence is intensified, and the phase when the destructive influence is intensified. The Circles and the Rays flow steadily in their orbits, but when the positive phase is in being the outgoing currents are sped up, and when the negative phase is in being the incoming currents are sped up.

The great Rings - three in number - are the primal Trinity, known to you as the 'Absolute' though the implication of the word Absolute is known to few. That is to say, the term Absolute has been used by Masters in teaching pupils without the pupils realizing its full import. Because there are three Rings the 'Absolute' is a triune force. These three, operating together with an indissoluble interaction, are the Three which are One and the One which is Three. Refer the terms of the Athanasian Creed to this Trinity and you will grasp the meaning of the Initiate who dictated it. The Rays form together a complex system which will be referred to under the name Zodiac. The Circles are the Cosmic planes.

The Central Sun is that point in space which would be reached if the line from the sun of your system were drawn to the star known as 'Alpha Centauri' and thence projected. You have seen how the atoms arise - as vortices in the angles of the Rays. How, in their simple form, they remain upon the first of the Cosmic planes wherein they originated. When, however, they form alliances among themselves and become composite, their weight, metaphorically speaking, that is to say, their susceptibility to influences is increased, and susceptibility to influences is all that weight is esoterically.

That fact forms the basis of levitation and flight through space. Cut off your influences and you can move freely. When the atoms become composite centrifugal forces drive them outwards, and, finding the path of the flowing Rays, they proceed by these as being the lines of least resistance. When they reach the next Circle they remain there, having found their level of gravity. Then presently their composite atoms form associations and are again swung out by the path of a Ray. Therefore, you will see that it is only when the extremely elaborate atoms of the 7th Circle form alliances that they start back up the spiral to the Central Sun. You have heard how these atoms, in their journeyings, progress up and down the Rays, for they are too highly evolved, too composite to be allowed to remain upon any plane. When an atom, however, has completed the circuit of the Rays and seeks to start out again it finds its place taken by the atoms of later development. It cannot enter that stress for it is full, it must therefore remain in the Central Stillness. No atom goes twice around the Circuit, therefore the Central Stillness grows as evolution proceeds, and those atoms which have come home rest from their pilgrimage. And when the last atom has come home the whole creation sinks to sleep, and the Cosmic tides set inwards as the Ring-Cosmos swings to its negative phase. Meanwhile the Rays flow and return, and the Circles swing on their path, but the atoms stir not, though each within itself contains an infinitude of balanced movement.

When, however, the Ring-Cosmos passes into its new phase fresh attractions flow towards the periphery. Now the influence of the Ring-Cosmos and the Ring-Chaos must be clearly understood. When the influence of the Ring-Chaos predominates there is an unbalancing force; that is to say, the Ring-Chaos is in its positive plane; and when the influence of the Ring-Cosmos predominates there is a compensating of force, it atones for the excessive force of Chaos.

Now Chaos calls outwards into space. Cosmos balances and compensates until a static condition is produced. We have seen that the first phase of atomic evolution has concluded with all the atoms evolved to their utmost complexity, withdrawn from the outer circles, and clustered round the Central Sun. The Ring Cosmos has done its work. All is balanced, static and sleeps. But as the cycle revolves the Ring-Chaos has its turn and it over sets the balance which has been achieved, and the most composite of the atoms feel first the centrifugal forces urging them and yet again seek to come forth. So the great units come out once more, down the lines of the Rays, but they proceed, not now through empty space, but each circle is populated by these atoms of different degrees of complexity whose relative specific gravity holds them at that distance from the Central Stillness.

These composite organisms, finding themselves thus surrounded by inferior organisms, draw them about themselves by the force of their whirling revolution, and thus, as they progress outward, each becomes surrounded by a sphere of the matter of each plane which it carries with it.

Now the great organisms, which come forth are built up around the prime atoms of different tangential angles, and these, according to their numerical compositions, differ in size and also weight, and therefore find their appropriate borne on different planes or Circles where they are held by their relative specific gravity. The Rays can carry them no further. The first phase of atomic evolution was essentially concerned with the Rays, but in the second going forth with the great organisms, the Circles have their phases, and these great organisms do not go out and back, but revolve with the Circles, each in its appointed track. Therefore evolution has now built up, in addition to the primal statics - the Rings, the Rays and the Circles - two more sets of statics - the atoms, each in its plane according to type, that, owing to their nature, have settled down, having found their specific position; and the great organisms, which have also settled down, each to its radius of movement. The atoms move tangentially among themselves, and the great organisms revolve around the Central Sun, passing through the influence of the Rays as they revolve.

These, therefore, are relatively static, subject only to the cyclic changes produced by the phases of the Rings, and the influences of the Rays as they pass through them. Each of these great organisms can attract to itself as much of the matter of each plane that it passes through on its way out at the beginning of the second phase of its evolution as it can hold by the attraction of its mass, and it can pass out as far as the momentum of its mass can take it from the Central Sun. Therefore its position is determined by the angles of the facets of the primal atom upon which it was built. That is to say, if the Vortex set up in the angle of the Rays moved in a three-sided path it could go no further than the first plane beyond the Central Stillness, it would have to be a ten-sided figure to reach the seventh plane. You will thus see that each of these great organisms has for its key the number of the angles in the path of the original vortex which gives rise to it. This forms its limit and determines the circumference of its influence. This, it is, which determines its Ring-Pass-Not.

We have therefore developed a number of great organisms, which being exposed to the influence of the Rings, the Rays and the Circles, themselves develop upon similar lines. That is to say, each of these aggregates of atoms sort themselves out according to the nature of the atoms composing them; and these atoms having developed under their prime influences, and having those influences established in their natures by the action and interaction they set up, form miniatures of the Great Cosmos, and these great organisms, these, that is to say, which are of the seventh plane, are known unto you as Solar Systems.

That, in brief outline, is the history of the genesis of a solar system, and of solar systems in general - of your own in particular. There are many other solar systems upon the seventh plane besides your own. Some of them are known to you as the stars, but the few you know are but an infinitesimal fraction of those, even of your own plane, which you do not know; and there are others upon other planes which are not perceptible to you in your present phase of evolution.

You will perceive that each phase of evolution gives rise to a grand unity, which is a unit, though complex. First, the system of the Rings - which is the 'Absolute'. Then the system of the Rays and Circles, which is the Cosmos. Then the Cosmic atoms, according to their planes. Then the great organisms, which we will call the universes, also according to their planes. You have then, you see, the numerical series. If you will number them you will see how the numbers run. The universes, or solar systems are of the fourth Cosmic phase of evolution.

Now these universes undergo internal evolution upon the same lines as the Cosmos, and these phases of internal evolution continue until they also become static within themselves, and their composite atoms flow into the Central Sun, each of its own system, and rest there.

Then, when once again the influences of the Ring-Chaos break up the Cosmic balances, the great organisms, developed in each solar system, go forth and burst through the Ring-Pass-Not of that solar system and, as satellites, circle round it. Whereupon, the solar system which underwent disintegration, starts once again a new phase of its evolution, whose units are the composite atoms evolved in its previous evolution; passes again through all the phases of evolution, and again flings off the 'star seed'.

Meanwhile these great organisms, which are first scattered, are repeating the process, each in its turn, so that the solar systems become, in their turn, Cosmoi to those great organizations to which

they gave birth; and so this process, which I will call the stellar evolution, goes on until a static condition is reached among the great organisms and their progeny; and then, the influences of the Ring-Pass-Not, coming into action, a great system is sent back to the Central Stillness to come again forth when the influences of the Ring-Chaos call them out; and such process continues until such time as the organization of the Cosmos becomes so mighty in the force it has generated, that it bursts the Ring-Pass-Not, and the great organisms rush forth into the Unmanifest, and by their swirling movement gather space about them, and, in their turn build new Cosmoi. Such is the history of a Cosmic evolution.

You will perceive that each plane of evolution begets an organized system of systems of forces. These forces react to all influences that play upon them, and register the reaction in the movements of the space that is under their influence. They are therefore sentient because they react and register the reaction; and because they register the reaction they develop through experience so that even the three primal Rings are sentient influences, capable of development. But they are so vast, these Rings, and so simple, because the influences which act upon them are so few, that their individuality, though it exceeds the span of all imagination, is exceedingly primitive. Yet it is upon this vast and simple type that your individuality is built up. Therefore it is that you, small as you are, have your affinities with these Cosmic Beings and are influenced by their phases from the Absolute down to the atom of your own Earth, which is the Secret Wisdom. For the uninitiated man is acted upon by these forces, but the initiate, by his knowledge, escapes from their influence and uses them for his own ends. Should his ends be those of the Cosmic evolution he grows and develops through all its phases till he attains that static condition which is completeness, and, following the laws of the great organisms of which he is now one, he gives rise himself to a system.

Chapter VI. Cosmic Influences on a Solar System.

You have duly received the first part of the work. Your minds need to be thoroughly imbued with these principles in order that you may understand what is to follow. I will briefly recapitulate. Motion in space is the prime. When its circuit is concluded it forms the Ring-Cosmos; Which gives rise to the Ring-Chaos; which, by its secondary influence, causes the Ring-Cosmos to form the Ring-Pass-Not.

This is the Three or Trinity.

The inflowing influences, converging upon the center, and radiating to the periphery are the Rays - the twelve. The motion of the Cosmos gives rise to the seven - the bands or planes. The converging angles of the Rays give rise to the Tangential motions. These, when in opposition, give rise to the Atoms. The Atoms, moving in their turn along the paths of differing angularity, form the complex atoms, which centrifugal force sorts out upon their planes. These finally, in the outermost plane, when they combine again, not being able to go any further, return to the center. These are called the journeying atoms. The others are the static atoms, because they have settled down. So that you have in the Central Stillness, no atoms but only the Primal Forces.

Upon the 1st plane you have atoms whose path is a triangular one; therefore the Number upon this plane is based upon 3; the simplest atom presents three aspects, and the most complex is a multiple of three. The atoms of the 2nd plane have 4 for their Number, and the 3rd plane have 5, the 4th plane 6, and so on, down to the 7th which has 9. These are referred to as the Secondary Numbers, whereas the number of the Cosmic Forces are the Primary Numbers.

You have then, as Primaries 1, 3, 7 and 12; and as Secondaries 3 to 9 inclusive. The Prime Tertiary is 10. Ten is the number of evolution, because it is the atoms of ten angles that evolve.

You will perceive from the foregoing that the Primaries give rise to each other and have settled down to stability, cycle following cycle in orderly progression. They have completed their course,

and have achieved the maximum complexity of which they are capable. Under the influence of their changing phases the secondary movements pursue their courses. The secondary movements obey the laws of their own natures, subject to the laws and conditions of the primaries. Likewise with the Tertiaries, each plane of existence pursues its course, subject to the influences of that phase which gave rise to it.

For example the Ring-Cosmos passes through its positive and negative phases. The Rays therefore, are sometimes flowing faster upon the negative, and outgoing arc, when the negative phase of the Ring-Cosmos is prevailing upon their segment; and sometimes the inflowing, or positive aspect, is sped up as their segment of the universe is covered by the positive phase of the movement of the Ring-Pass-Not.

Each segment of a Ray is influenced by the Circle in whose area it lies. Therefore it will be seen that a Journeying Atom will be subject at a given moment, to the influence of the Ray upon which it is traveling - to the position upon that Ray, whether upon the outflowing or inflowing aspect to the plane which it is passing through, and to the phases of the Ring-Pass-Not. Therefore, if you wish to understand the conditions of a given traveling atom it is not enough to know the facets of its path, you must also know the phases of the influences to which its nature is reacting. This is called Sidereal Astrology, but the phases of this Astrology are so vast that they concern only the lives of the solar systems, just as the planetary Astrology concerns the phases of the Planets. The nearest point of contact which you have to Sidereal Astrology is known to you as the Zodiac.

It is obvious then, if you consider the life of a man, you must consider it in relation to the solar system of which he forms a part; and you must also consider that solar system in relation to the Cosmos. Sidereal Astrology will give you the phases of evolution.

You see then, that there atoms of specific types that have settled down permanently upon each plane, and move at constant distances from the Central Stillness, in the same way that a liquid, containing different substances in solution will, if placed in a glass tube and whirled rapidly round at the end of a string, show clearly the sorting out of the component parts of the mixture according to their specific gravity, the heaviest or most composite towards the periphery, so that at the conclusion of the process you can perceive the graduated bands of different types of substance.

These atoms have proceeded as far as their nature permits them to proceed in evolution.

You will perceive that each new phase of evolution achieves that utmost complexity that its factors permit, and then settles down to a rhythmic repetition of the sequence it has arrived at. The fresh phase of evolution, which begins when the next phase of the Ring-Chaos over topples the stability achieved, starts where the last phase finished, because it already has in its nature all that the last phase has achieved. You see now the significance of the maxim 'As above, so below'. The Cosmos is the framework upon which all is built up. You start where God leaves off; therefore what was in God is in you, and something of your own which is called free-will, though it is a bad name.

Now with regard to the evolution of the traveling atoms, these give rise to solar systems. You will remember in the previous lectures that these solar systems arose on different planes of the universe according to their Cosmic specific gravity. That is to say, they start their evolution at different phases of Cosmic development. But you will remember that the outgoing atoms gather up matter from each plane they pass through to build into their universe.

Those systems which are developed upon other planes than yours I will not deal with in the present course of study, for they are too remote for practical purposes. I will consider, however, the phases of development through which the systems pass that originate upon the seventh Cosmic plane, of which your solar system is an example. Let us therefore, trace the life of a particular traveling atom which is to become your sun and attendant system of planets. You will remember that it has been round the circle of the Cosmic Rays and experienced their twelve influences, both positive and negative; and that it has, in its composition, matter of the seven Cosmic planes. Its Numbers, therefore, are; 3 Because it is under the influence of the Rings, 7 Because it has matter of seven types, 12 Because it has been acted upon by the twelve Rays and each of the seven planes of matter will have its particular Number, from 3 to 9 inclusive. This, having passed out through the placid planes of Cosmic matter, and taking with it as much as it can draw from each plane, arrives finally

at its own plane where an equilibrium is established between the centrifugal and centripetal forces of the Cosmos and its own bulk. It then settles down upon its orbit. The Cosmic influences to which it is exposed can be calculated in an orderly sequence, because they are definitely established. It will pass round the twelve Rays, and experience the change of the phases of the Rings, and in addition to this, the influences of the Great Organisms of the other planes will, whenever their orbits happen to bring them near to each other, for they move at different paces upon different planes, influence the matter drawn from that plane in the make up of that system.

This Great organism that we are considering has settled down to its orbit, and you can conceive of it as a nucleus of that original traveling atom surrounded by great cloudy, unformed, unorganized belts of matter of the different planes. These are held about by attraction of its mass. The limit and extent of its attraction marks the extent of the system. Like all else in the Cosmos, this mass has a rotating movement which is derived from the original central atom.

The movement of that atom within its orbit gradually, in the course of untold ages, flattens out into a spinning disc. Then the motions, which you saw in the formation of the Cosmos, are gone through, because the laws of motion are the same on every plane, and the solar system sorts out its matter into seven planes owing to specific gravity.

Section 2. Chapter VII. The Evolution of a Great Entity.

Conceive now the experience of existence as it is apprehended by the dawning consciousness of a Great Entity.

Hitherto we have looked at the evolution of points of manifestation from without; we will now consider the matter from within, as it appears subjectively to that Cosmic unit of manifestation referred to as a Great Entity.

First, conceive the sensation of a whirling, and no other sensation at all. Conceive yourself becoming so habituated to that whirling that its cessation would occasion a sensation but not its continuance.

Conceive a secondary motion developing, perceived at first because of its newness, and losing its stimulative power owing to habituation, as did the primary, and so on, in sequence.

You will now perceive that movements that are habitual must be maintained if an absence of distracting sensation, which is the basis of attention, is to be arrived at. Therefore the accustomed movements are implicit in the 'Being' of that which is based upon them, and when awakening into manifestation it will always seek to establish these motions as the basis of its

existence. Now cast your mind back over the teaching given you by your previous teacher, and recall the phases of movement to which the Great Entities became habituated in the course of Cosmic evolution which led to their development, and you will see that all these movements have become implicit in their nature and will be reproduced when they, in turn, set out upon that inner elaboration which constitutes the next phase of Cosmic evolution, the phase of the evolution of the Great Entities, bearing in mind that upon whatever plane or Ring of the Cosmos the Entities settle down for a cycle of evolution, the numerical values of the evolution will be determined thereby.

We will now consider the evolution of that Great Entity with which we are especially concerned. Implicit in its nature are all phases of the Cosmos, hence the significance of the Hermetic maxim 'As above, so below'.

Whatever is developed under a certain set of conditions reproduces those in the recapitulation through which it goes, prior to the undertaking of original development. The Great Entity then, having this basis of Cosmically evolved factors to work upon, combines and recombines them into the infinite diversity of a manifested universe. Therefore the infinite diversity of a manifested

universe can be dissolved into the prime simplicity of the Cosmic beginnings. Each phase or aspect of the universe has its origin in a similar phase or aspect of the Cosmos. A Great Entity, having settled down upon its Cosmic orbit, proceeds upon the work of evolution. Having had the Cosmic factors implanted in its nature by the experiences, it proceeds to bring them into function independently of the Cosmic impulse of its own momentum, which momentum may be called a Cosmic Will.

You will perceive that we are still speaking in terms of dynamics. It is not until a high degree of evolution has been achieved that we can speak in terms of psychology, but there is an unbroken line of development from movement to thought.

Tangential movement is a simple form of reaction. Thought is an infinitely complex form of reaction. It is a question of difference of degree, not difference of kind. Fundamentally there is no difference of kind in anything, because all can be reduced to the prime central stillness, but upon the planes of manifestation there are differences of kind, because the Rays issuing from the Central Stillness diverge as they proceed; and as consciousness is limited in its objective functioning to one plane at a time, a unity of the innermost cannot be conceived save by the consciousness that stands therein, and, as the transition from one plane to another of any Ray or line of force is marked by a subdivision of that Ray, you will perceive that there are differences of kind in manifestation, although there is a fundamental unity. Differences of degree are reckoned along the length of the same Ray. Differences of kind are reckoned in the sequence of Rays round the circle. This digression which, strictly speaking, belongs to another section of the subject, is made here to ensure clearness of comprehension in the argument pursued.

A Great Entity commences its evolution by developing, not the Cosmic Rings, but the concept of those Rings. That is to say, it puts in motion the memories of the experiences it underwent when that which afterwards condensed into its substance, was part of the primordial swirling. It knows good and evil, and therefore is a God. It is the knowledge of good and evil which enables it to manifest, because the good is a dynamism, and the evil is a thrust-block. The Ring-Pass-Not of a universe is the limitation of the attention of the Great Entity forming that universe. It is its determination to concentrate its attention upon the task it has set itself. You get the equivalent in the psychological mechanism of the censor, and in the processes of the concentration of attention.

Chapter VIII. The Relation of a Great Entity to the Cosmos.

A traveling atom, having passed through all the phases of Cosmic evolution up to that of which its production is the crown and completion, makes a final journey to the Central Stillness. Then, by the overbalancing of the equipoise, it issues forth, but with this difference, it has itself become, owing to its development, a center of attraction. Thereby it draws to itself a certain number of atoms of each plane through which it passes until it arrives at the Cosmic belt which is decreed as its habitation by its own specific gravity in relation to the centrifugal forces of the Cosmic whirling. There will be then, in this new organization thus formed, a central nucleus of the traveling atom. This central nucleus will have implicit in it, the modes of reaction to which it became habituated during its experience of the phases of Cosmic evolution.

In order to achieve the absence of sensation to which the presence and the continuance of habituated reactions in their accustomed ordered sequence alone can give rise, this nuclear atom continues to make its accustomed reactions owing to the momentum of its particles. These actions upon its part induce the corresponding reactions of the loose aggregations of matter from each Cosmic plane that are gathered about it. Thus is built up a miniature Cosmos.

As may be perceived by a little thought, this Cosmos, with the nuclear atom corresponding to the Central Stillness, which, in the larger Cosmos transmuted all reactions, in this, the reflected

Cosmos, performs the same function. At the same time the entire organism is subject to the phases of the Cosmic Forces. Its synthetic aspect receiving an impulse during the phases of the Cosmic Day, so called, or those segments of the circle in which the positive or stimulative forces are predominant; and its analytical forces receiving a stimulus when passing through those segments of the circle in which the negative forces predominate. Likewise, as it passes, through the sphere of influence of each Ray, will the corresponding forces of its own nature receive an additional stimulus.

You may conceive, then, this great organism traveling round a circle which is divided into four quarters - positive and negative alternately - and in addition to this each quarter is subdivided into the spheres of influence of three Rays. You have now the key to the so-called Days and Nights of Brahma, and to the periods of evolution; but, as this great organism we are now considering is itself a miniature Cosmos, you will perceive that a more speedy cycle will be performed within its own nature.

In addition to these influences there is another set of influences to be considered. These influences being the gravitational attractions of other great organisms upon other planes of the Cosmos.

The relations between one great organism and others upon its own plane are fixed and determined before evolution commences, and, being constant, need not be considered. But the revolutions of Great Entities upon other planes of the Cosmos are conducted at different paces and without relation to those Entities of other planes than their own. Therefore they will pass in line with each other periodically, momentarily blocking the pull of the central attraction upon those organisms further out than themselves, and also exerting a gravitational attraction upon all particles of their own plane and planes above their own, in the mass of a great organism on an outer path.

This cutting off temporarily of the central attraction upsets the equilibrium of the outer organism, removing the centripetal check upon the centrifugal force, but the tendency of certain types of molecules to fly inwards towards the attracting body tends to counterbalance this. Also the whole will of the nuclear atom of that organism is to maintain constant the habitual conditions which have become the law of its nature. The habituated conditions it may be said, in parenthesis, are those sequences which man discovers and christens 'Natural Laws'.

Likewise the forces of the Cosmos tend to maintain equilibrium compensating each other, but there occurs, nevertheless, at irregular intervals, conditions which require compensation, and these give rise to varying degrees of irregularity in the movement of Great Entities, and hence to the presence of positive evil, sin and disease within their spheres.

The Cosmos itself has to strive to attain adjustment at the commencement of each phase of its evolution, and the irregularities which occur before adjustment is effected, and which have to be pulled straight in the course of evolution, are the origin of this evil, in the sense in which the word is used popularly. Cosmic evil is a limitation, an opposition, and is the prime condition of manifestation.

This Cosmic evil, the Divine evil, the Divine death, is implicit in each Great Entity, and is the basis of its manifestation and evolution. For without limitation, finiteness, there can be no manifestation, and without death or discarding of the outworn, there can be no progress.

These elements then of Cosmic opposition are always present in a manifested universe; but universal evil, under its two aspects of sin or perverted force, and disease or perverted form, are due to the irregularities of orbit caused by passings of great organisms upon different planes of the Cosmos. These are always found in their extreme form at the beginnings of an evolution, and are generally adjusted in the course of an evolution as compensations are made, until, at the end of an evolution, a perfect and rhythmical balance of the whole Cosmos has been achieved - a synthesis of action and reaction which maintains stability. You may conceive of the Cosmos as extended in space and in time. But when you come to consider a Great Entity, its parts or aspects are not extended in space or time, but are implicit in its nature as habitual reactions which are made whenever and wherever the appropriate stimulus is forthcoming.

Therefore, all the phases of Cosmic evolution - The Rings, the Rays and the Planes - occupy neither time nor space in the organism of a Great Entity, but are implicit in its nature. This is the fourth

dimension - the dimension of the implicit nature of the nuclear atom, which determines the nature of the manifested universe which it projects.

We have seen then, that the traveling atom builds itself a form of Cosmic substance out of the matter of the seven Cosmic planes; and this form, of which the nuclear atom with its habituated reactions is the ensouling life, is subject to the influences enumerated.

We have now, you will perceive, traced two phases of evolution, the Cosmos phases, and the more rapid recapitulation of the phases of the development of a Great Entity; and we have studied that Great Entity in its relation to the Cosmos which is its environment, and to the Central Stillness which is the compensation of all forces of the Cosmos, which is its God. We will now consider the life of a Great Entity in relation to the universe of which it is itself the God - the Creator - the Conditioner - and the Sustainer.

You will perceive that a Great Entity comes out from the Central Stillness and takes its place upon its appointed circuit, and conducts its organization under the influence of the negative or destructive phase of the Cosmos, and this may seem strange to you, that creation should take place under the influence of a destructive phase of the Cosmos, or any other organization which, by overbalancing the synthesis of forces achieved in a phase of evolution, causes them to embark upon a fresh phase of development in order to re-establish their harmony; and as they commence this phase with the experience of the preceding phase implicit in their nature, they commence where the last phase ended. They climb upon its shoulders; and thereby evolution arises to a greater complexity, for it has now become an organization of organisms. You will see this principle prevailing throughout all things, great and little, above and below, it is one of the Cosmic principles, and one little known, if known at all.

Likewise the phases of development during which a Great Entity organizes itself are internal and therefore subjective. They are not carried out under the stimulus of sensations derived from external conditions, but under the stimulus of feelings arising from internal conditions, and the phase corresponding to the phase of existence which a human soul passes through between death and birth.

This phase, having been completed, a Great Entity, having arrived at the greatest degree of organization which it is capable of with the conditions at its disposal, can go no further. Being organized throughout, each part is affected by, and responds to, changes in any other part. It is therefore fully conscious, for consciousness is but awareness, and awareness is but reaction to a stimulus. The conditions of its nature, being habitual in their sequence, no longer give rise to conscious stimuli. The Great Entity has therefore a consciousness, but nothing of which it can be conscious except itself. The Cosmos, be it noted, being entirely habitual to this Entity, forms the conditioning background of its consciousness, which is comparable to the human sub-consciousness of the automatic level.

It has then created, by the sensations of its own nature, a concept of itself, of which it is aware. Here then, is a novel sensation, and it dwells upon it. This is the self-consciousness of a Great Entity.

This is a creation. `And God made man in His own image and likeness'. A universe is a concept in the mind of a Great Entity. It is created by the self-contemplation of a Great Entity.

The consciousness of a Great Entity then, being aware of this image of itself as a whole, next becomes aware of the changes in the proportions of the forces of its own nature caused by the influences through which it passes, thus giving rise to fresh concepts concerning itself, and these concepts are added to the existing complex, conditioning it historically.

These are the different outflows of creative force concerning which you have heard.

This teaching concerning the subjective and the objective aspects of a Great Entity is the key to the doctrine of pantheism, which is a half-truth, as generally understood.

For a Great Organism holds in its memory the Cosmic conditions although It itself does not contain the Cosmos of which it is a part. Likewise the mental picture of itself projected by a Great Entity reflects that Great Entity in its entirety, being the product of perfected consciousness, but it is not that Entity of which it is the emanation, though it is entirely conditioned by the nature and experiences of that Entity, having no other origin and being exposed to no other influences

whatsoever, for it has no other existence save in the consciousness of the Entity conceiving it, therefore it is not affected by Cosmic conditions, being of another order of creation to the Great Entities which are the fellows of its Creator, and all of which, in course of time, project their concepts of themselves. It is, however, affected by the Cosmic phases because the Great Entity, which is the basis of its existence is affected by them. It is this fact that secures a universe from disturbance and permits of no intervening influence intruding in the relations between it and its Creator and Sustainer - its God.

Its God, therefore, is omnipotent as far as it is concerned, though Himself conditioned by the conditions of the Cosmos.

Its God is infinite as far as it is concerned, because He is 'all that is' to it. What He is not, is not, as far as it is concerned. But He Himself is finite in relation to the Cosmos, which is infinite as far as He is concerned, being all that is for Him, though itself finite in relation to the Unmanifest.

Omnipotence means free from the influences of any conditioning power.

Infinite means the sum total of the influences towards which an organism is capable of reacting.

A universe, then is a thought-form projected by the mind of God.

The relation of the God of a universe To the Cosmos. To the universe. He is evolved He is its Creator and conditioned and Sustainer by it.

Finite. Infinite and Omnipotent.

Chapter IX. The Projection of the Concept of the Universe.

“And the Earth was without form and void, and darkness was upon the face of the deep” (Gen. I. 2). As we have already seen, a Great entity projects its concept of itself. This, however, is not the beginning of objectivisation in a universe, though dealt with first in the order of instruction in order to make that which follows more comprehensible; for the Great Entity, when it projects the image of itself found substance of the same nature as the projection, awaiting the organisation which that projection should bring about.

It will be recalled that the Great Entity gathered about itself atoms of each Cosmic plane, out of which it formed its body. These atoms themselves are Entities, though of a lesser degree of development than the Great Entity of which they form a part. Being of lesser development the full recapitulatory growth is achieved earlier. Each atom, having realised itself, has created a concept of itself. These concepts, projected by the atoms, are not atoms, but so many units of knowledge of ways in which reaction is possible. They are not, therefore, sorted out into concentric belts, because there is nothing in them upon which gravitation can act. They are merely forms of reaction.

Now the consciousness of a Great Entity is not aware of the individual reactions of its atoms, any more than the consciousness of the cells composing its body. Therefore, when it seeks to conceive an image of itself it has to take the reactions of the different types of atoms in their respective aggregates, and is dependent upon the atomic concepts for the creation of the necessary atomic images. Therefore, the Great Entity has to create its concept of itself in objective substance, and is therefore limited and bound by conditions of the nature of the already created images which it utilises.

Thus the atoms, by conceiving their own images, perform the primal act of creation.

The first act of creation proceeds from the body of God, and is but a mass of unorganised units.

“Darkness was upon the face of the deep”. These units having no organisation, and consequently no relations among themselves, could not attain to objective consciousness, but as soon as the concept of the Great Entity, based upon its Cosmic experiences, became projected, it organised them into relationships, and they then became conscious of each other - became affected by each other.

It will thus be seen that the cosmic atoms created the atoms of each prime sub-plane of

manifestation, and that the atoms thus created by being brought into relationship each with its own kind by action of the Great Entity, developed into sub-planes.

The prime atom of each plane then, has a direct relationship with its corresponding plane of Cosmic substance, and consequently is influenced by the Great Entities upon that plane. Hence there is always a certain opposition to the Great Entity of a universe on the part of the atoms which form its matter. This is very important point.

We have seen then - first the projection of the atomic concepts; then later, the projection of the Great Entity's concept of itself which organises those atoms into a miniature Cosmos which is called a universe in these papers to distinguish it from that stage of existence which gave rise to its parent and Creator.

Chapter X. The Relation between the Projected Image and the Logoidal Consciousness.

“And the Spirit of God moved upon the face of the waters. And God said; Let there be light, and there was light”.

You have heard in previous lectures how the atoms, or units of manifestation of a universe, are formed; and also how the currents and tides of Divine Power are set flowing through them, so that an exact replica of the Cosmos is formed in miniature, the correspondences being exact, save that the cycles of a universe, moving in a smaller radius, have a more rapid rhythm. (Note, that a rhythm is but a series of repetitions). Two phases of logoidal evolution have been outlined:-

(a) The phase of the development of the matters of an universe.

(b) The phase of the development of the Tides and Rays.

The one is the raw material out of which an universe is made. The other is the skeleton - the framework upon which it is built.

We have then, enormous quantities of atoms differentiated only into planes, and sub-planes of planes.

Seven distinct types and seven sub-types of each type. We will now consider the third phase of logoidal evolution.

At the beginning of an evolution the Logos is alone in that sphere which is afterwards to become its universe. It is conscious only of itself, for there is no object in existence within that sphere of which it can be conscious.

It will thus be seen that the Logos reverses the order of the psychologist's concept of the evolution of consciousness, having first Cosmic consciousness, then self-consciousness, and then objective consciousness.

The Logos then, is now aware that a thought-form has been projected from its consciousness into its aura. For, under one aspect, the universe may be conceived of as the aura of God.

This consciousness of an object produces a reaction in the Logoidal consciousness. There is a subject-object adaptation, and this adaptation produces a corresponding modification in the reflected universe which becomes capable of an object-subject reaction. Thus a relationship, or reciprocity, is established between the Logos, or Great Entity, and that projected image of the Logoidal consciousness which is the incipient universe. It must not be thought, however, that the Logoidal consciousness is limited to awareness of its objectified universe. The Logoidal focused consciousness, or conscious consciousness, is thus limited. For a focused, or conscious consciousness, can only be built up out of awareness of, and reactions to, objects. But the logoidal sub-consciousness is aware of the Cosmos and the consciousness is influenced by the subconsciousness which is its basis and background; and as the Cosmic Tides ebb, flow, and move round the Circle, the corresponding aspects of the Logoidal sub-consciousness are stimulated by

their influences, and the sensations thus engendered in the Logoidal consciousness are forthwith incorporated in the self-projection, which is the universe, and the conscious consciousness of the Logos perceives them there, so that an infinite series of reactions, and modifications of reactions, proceeds. At first in broad and simple movements, but gradually multiplying into an inconceivable complexity.

All these modifications influence the atomic matters of the incipient universe, and determine their nature and characterise them. It is these characterisations that are subsequently discovered by man as Natural Laws, or observed sequences.

Thus are the natures of things determined. They are built into them by the Logoidal reactions to the conditions of its Cosmic environment, and these modifications are constantly proceeding. They do not endure for a phase and cease, but continue as long as the atomic sub-planes to which they correspond, are in existence. Thus an elemental evolution proceeds apart from the evolution of Life and Form as we know it.

Chapter XI. Auto-reactions and Cosmic Memory.

You have perceived in the course of these lectures that each phase of evolution, whether Cosmic or Logoidal, starts with a new type of action or reaction; and every possible variation is worked out by adding the possibility of reaction to the reactions already established.

It resembles the possible number of changes that can be rung upon a chime of bells, and the addition of a bell to a chime makes possible a great increase in the number of variations which can be performed. Thus each new factor evolved increases the complexity of manifestation, and when the utmost diversity, of which the factor renders the universe capable, has been arrived at, that phase of evolution has reached its maximum development, and there is a pause in the process while the Logoidal consciousness perceives what has taken place, and sees that it is good and by absorbing it into Its consciousness affects a new reaction, which reaction is, in its turn, projected into the manifested universe; so that evolution resembles a series of duplicating mirrors wherein the consciousness of the Logos projects its own image; becomes aware of, and reacts to, the image thus projected; and the reaction affects the projection, and so the circle is everlastingly revolving.

You will perceive that the Logos, or subject, has become aware of an object; that object being a reflected projection, or replica, of the subject.

Awareness of an external object on the part of the subject must be reproduced as a corresponding reflection of consciousness in the object, so that the object is equally capable of awareness of an external object. But the object, being of a different order of manifestation to the subject, cannot be aware of the subject but can only be aware of itself, and of the influences which proceed to it from the subject.

Hence the saying that "No man hath at any time seen God". God cannot be seen by any unit of the manifested universe during a manifestation. He can only be deduced.

The objective awareness is not confined to any one point of the manifested universe, but is a diffused awareness, around what may be conceived of as the Central Ring – metaphorically speaking - or to use more precise but more abstract terms; those types of atoms that most nearly resemble the atoms of the Cosmic Centre, that are of the simplest type and least bound by complexities, form the basis of the awareness. But let it be clearly understood that the awareness is not atomic reaction, but it is entirely of the 'force' or 'life' side of things. It is a modification of the Logoidal consciousness, not the projected atomic consciousness. It is the first reaction in a universe which is related to that universe alone, and does not originate in and return to, the Logos. A subject has appeared in the object.

Consciousness may be defined as reaction plus memory. That is to say, an action takes place in a particular type of substance and that reaction produces a secondary reaction in another type of

existence, which is related to the first in the same way as the atoms of universes are related to the atoms of a Cosmos, or the form of a universe is related to the consciousness of the Logos.

That is to say, the subject conceives ideas concerning itself, and these react among themselves, and the reaction - to use a metaphor - leaves a track in space round which the movement of its reaction continues to flow as pure movement apart from actual transition in space of the objects which perform the movement.

That flowing of pure movement in space is Memory - the reproduction of an image of an action in another plane of manifestation; and consciousness is built out of memory, as distinguished from awareness, which is a form of reaction between two planes.

It will thus be seen that the form, or framework upon which the universe is built, has been made the basis of a third type of manifestation - the manifestation of auto-reactions.

Chapter XII. The Birth of Consciousness in the Universe.

It is very necessary that a clear concept should be formed of the meaning of 'consciousness' and this point will therefore be elaborated.

You will recall that, in the teaching concerning the nature of a Great Entity, it was explained that consciousness was due to the complete reciprocal reactions of all aspects of the factors and capacities for reaction that had been developed in the course of a Cosmic evolution.

Consciousness is an integration of reactions, so that any change in any part is responded to by the corresponding adjustments of the whole. It is a principle of compensation that is involved, and this all-inclusive compensatory adjustment may be termed the basis of Cosmic Personality.

In its earliest phases it constitutes the synthesis of the latent reaction-capacity of an Entity. It is essentially a set of relationships, not of mechanics, and is therefore abstract, but with the development of external objects that affect the Entity new influences are brought to bear upon the compensatory adjustments, and the new compensatory reactions are thus called into play.

We then distinguish two levels of consciousness:-

- (a) The basic consciousness of the inherent constitution.
- (b) The compensations evoked by environmental influences.

A Great Entity, then, starts by evolving a basic nature, projects its own image; and its awareness of that image, in its multifarious aspects, builds up the second aspect of its consciousness. These two phases correspond to those aspects of a soul known as the Individuality and the Personality.

An Individuality, whether of a Great Entity or of the microcosmos which is man, is that series of organised reactions which reached an equilibrium in the preceding phases of evolution. Those phases, having passed away, nothing of them remains but the capacities for reaction that have been acquired by that Entity.

An Individuality then, is a set of stereotyped reaction-capacities. A Personality is that set of reaction-capacities which the addition of a new factor in evolution has made possible.

Individuality and Personality, then, refer to the stages of development and have a historical significance. They refer to Time, not to Form. That which is the Personality today will be part of the Individuality tomorrow.

A Great Entity, then, builds up its first Personality out of its reactions to the Cosmic Phases. It becomes conscious of the Self thus developed when reciprocal action of all its aspects is established.

That consciousness, which it thus develops, is itself an existence, objective to the mind conceiving it. As soon as consciousness has focused it as a thought-form, it is created and exists on its own account, and has become an object of consciousness; and in this thought-form thus created, the

same interplay of forces is set up which, in the Cosmos, gave rise to the Great Entities, and the process continues.

As the Cosmos is reproduced in miniature in the great Company of Entities, by means of which its evolution is now proceeding, so the thought-form projected by a great Entity in its turn gave rise to Entities. But these Entities begin their evolution at the point which the Great Entity which projects them has reached at the time of their projection. For, just as the Great Entity has, latent in itself, all the phases of the Cosmos, so have they latent in themselves, all the capacities of the Great Entity.

We see then in this projected thought-form of a Great Entity which we call a universe:-

1. The atoms, projected by the Cosmic atoms, drawn into the orbit of that travelling atom which became a Great Entity.
2. The lines of force and flowing currents, which are the projected consciousness of that Great Entity.
3. Out of the co-ordinations established by these second-type forces of the atoms, we get the setting up of currents of pure movements in space, which are the analogues of the first movement in space which gave rise to the Ring-Cosmos. Thus evolution runs its cycle and returns upon a higher arc to the door by which it issued forth.

It is these currents of pure movement (to be clearly distinguished from the transition in space of any object) which form the basis of consciousness in the projected universe.

As before stated, action and reaction do not constitute consciousness. It is reaction plus memory which is the basis of consciousness. And the currents in space in pure movement are the basis of memory because, being frictionless because substanceless, they persist.

We have then, action and reaction of manifest actions, and the persistence of the reflection of that reaction in a state which, relative to the plane upon which the reaction took place, is unmanifest. Hence the saying that "Out of Chaos issues Creation".

The Unmanifest has been organised. Something exists which did not exist before. Creation has taken place. These reactions speedily affect each other and so become organised among themselves, and this reciprocal reaction is the basis of personality. Thus the first development of consciousness in a universe is one great and comprehensive Oversoul.

The tracks of reaction which were developed in the Oversoul by action on the plane of the atoms, form invisible ruts which, when any atom crosses their track, cause it to follow that course until such time as the attraction, or pressure of other influences overcome that influence. Try and conceive of the first movement of an atom scoring a rut in 'force'; other atoms getting caught in this rut, and following its curve for a time, then breaking away to follow the impulses of their own nature and other atoms taking their place.

And again conceive the process as viewed from the plane of the atoms, you would perceive the myriads of atoms engaged in their tangential dance, and from time to time you would perceive an atom suddenly change the mode of its action, pursue the new mode for a time, as if captive under the influence of some invisible compulsion, and then break away and return to its original mode of motion. If then, you examine the rut again, you would find it has been worn deeper and the next atom would be held longer before it broke away, and in addition to the path determined by the rut, each atom dances with a movement of its own, the movement of the atom would produce modifications in the rut, and with each atom that it caught and forced to follow its path for a time, the rut would be modified. This is the first and simplest phase of the soul and the body. The tracks formed in space by gyrating atoms, catch other atoms and produce secondary movements, and the track grows in consequence.

The atoms which form these tracks are analogous to the Travelling atoms of the Cosmos.

Chapter XIII. The Beginnings of Mind and Group Consciousness.

We are now dealing with the beginnings of mind, and it is necessary that these fundamentals be clearly grasped.

You have already been told that movement of any object leaves a track in space. The object comes to rest, but the movement, as apart from the object, continues as pure movement.

It is pure movement - movement in the abstract - which gave rise to the Cosmos. This movement gave rise eventually to the locked-up nodes of opposing forces, which are the prime atoms. It is the movement of these atoms which forms the basis of manifestation. Manifestation, as you know it, is associated with the movement of objects, but Life - Mind - God - are abstract, and they are based upon pure movement unconnected with any object.

In our studies we have reached the point where the reflections of the Cosmic atoms, gathered about a Great Entity, have made the prime matter of a universe. And this prime matter has been ordered and organised into a miniature Cosmos by the reflection of the microcosmic reproduction of the Cosmic Macrocosm in a Great Entity.

You will recall that, in the evolution of the Cosmos, the similar types of atoms settled down upon their planes, but a more complex type of atom could not settle down, because their greater bulk caused them to re-act with a corresponding force to the centrifugal forces of the Cosmos, and instead of being held upon the 7th plane by the synthesis of forces, continued their outward path till they struck against the Ring-Pass-Not and were sent back to the Central Stillness.

Likewise in a universe, the atoms appropriate to each plane drew their tracks in space, and because there is no persistence of action, they are mutually cancelling. These tracks form the elemental essence of each plane. But these atoms which are too complex in structure to settle down upon a plane, having gone out to the uttermost plane, return thence, not to a Central Stillness, but to a central point of unmanifestation, where the Unmanifest wells up and becomes Manifest. That is to say, that at that phase of developing manifestation wherein new aspects of the Logoidal consciousness are being realised, these travelling atoms find their nearest affinity.

You will recall that it was previously said that the movement of an object leaves a track of pure movement in the Unmanifest, and remember that the Cosmic state is unmanifest when viewed from the standpoint of an universe. The Logoidal images therefore, have to pass from a Cosmic to a manifest condition, and in that transition they pass through a phase which is identical with that state of existence of the tracks in space drawn by the movement of an object. Therefore, being of the same nature, they can influence the tracks in space thus drawn.

These tracks in space are always of the nature of a closed figure - like the tangential atom tracks - and as the different Logoidal concepts are externalised, these atom tracks are influenced by them, and so reproduce in miniature the Logoidal Phases.

So that you can conceive great numbers of travelling atoms returning to the creative centre, and being, as it were, bathed in the influences of the Logoidal ideas.

These Logoidal ideas, of course, are building the framework of the universe, and so creating a huge replica of the Great Entity which is itself a replica of the Cosmos. But within that universe, being tracks in space of the travelling atoms not the atoms themselves, are also replicas of the Logos, for the reasons given.

So that you have, upon the 7th plane of an universe, gathered about the creative centre, great numbers of two-natured entities:-

- (a) A travelling atom which, because it has passed out through all the planes, has experienced the reactions of all the planes and therefore can react in each of these respective ways when subjected to the stimuli which produce that reaction.
- (b) You have also, in addition to this atomic body, the track in space it describes in its atomic dance. This track it has in common with all other atoms, but in the case of a travelling atom which has returned to the central creative point, this track in space is impressed with the Logoidal image, and

this distinguishes it from, what may now be called, the inanimate atoms.

These atoms have come under the influence of the Logoidal self-consciousness, and their tracks in space have been caused to re-act to that image by the sympathetic induction of vibration, so that they have become miniature reflections of the Logos. Whereas they themselves have merely generated a tangential track of movement which had a simple rhythm of the repetition of that circular movement. They have imparted to them, by the Logoidal vibrations, the same rhythm as the Logos is vibrating to.

Now remember that a repetition of circular movements gives rise to a rhythm, and that such a vibration is simply the impacting of a rhythm of one plane upon the substance of another. The Logoidal rhythms therefore, set the travelling atoms of an universe that experience their influence, vibrating to the same rhythm.

Thus it is that the travelling atoms of an universe contain the potentialities of reaction of which the nature of the Logos is capable. That is to say, that the Logos, or Great Entity, in the course of its Cosmic evolution, has acquired certain types of reaction. These are built into composite rhythms, and the composite rhythms are built into great chords.

These chords are series of rhythms within rhythms - loops upon loops, to use another metaphor. It is these composite rhythms that are impressed upon the travelling atoms of the universe when they approach that phase of existence where the Unmanifest is coming into Manifestation and, by the development of their own nature, are able to contact that which is relatively unmanifest to their phase of existence.

The concrete movement of an atom sets up an abstract movement-pure motion. Pure motion is the characteristic of the Cosmos, and therefore is of the same type of existence as a Great Entity, or Logos.

So that, each moving atom in the universe, by its movement, creates a counterpart of itself, of the same type of existence as that which forms the Cosmos. Therefore of the same nature as the Logos of its universe, and therefore capable of reciprocal reaction with that Logos. But the atoms of the planes, having settled down upon their planes, do not come into direct contact with the Logoidal Mind in its realisation of concepts. But the travelling atoms, because they have not settled down upon the planes, have not become bound to their own forms - are not stabilised - and therefore return to a primitive condition after they have reached a highly evolved state, and the forces of that primitive condition cannot influence them, as they can the atoms of their own plane.

These travelling atoms, then, have escaped from the laws of the manifested universe, which bind into forms (for the universe itself is a thought-form) and are therefore exposed to the same laws which condition the Logoidal nature, and therefore receive an identical impress to that which the Cosmos has imprinted on the Logos. "And God made man in His image and likeness".

Having received this imprint, these atoms proceed to gather about themselves other atoms, because the track in space, having had a definite rhythmical circular motion impressed upon it, and no longer performing a cannoning tangential Brownian movement, sets up a vortex, and the vortex draws other atoms into the sphere of its movement and holds them gyrating about it.

Then you have this condition, an atom, the reflection of a Cosmic atom, which is too complex to settle down upon a plane of manifestation, returns to the centre, having developed, by its movement, a circuit of pure motion which is of a Cosmic type of manifestation. Its Cosmic aspect is stamped with a Logoidal image, tuned to the Logoidal rhythm by the process described, and this abstract aspect of the atom, being thus conditioned with qualities, causes its concrete aspect to move with a circular rhythm of a corresponding type. And this circular rhythm, being thus held constant, as distinguished from the tangential movements of the atoms of the planes, sets up a vortex, and the atoms about it are drawn into that vortex.

Thus we have a Cosmic vibration of pure motion holding a travelling atom to a particular type of movement, and the travelling atom by its movement, drawing other atoms of the plane upon which this occurs, into its orbit, and holding them there.

These three aspects are:-

- (a) The Sparks of Cosmos, or Divine ensouling Spirit, which was first described as a track in space described by the atom.
- (b) The atom, which is the beginnings of a vehicle and is known to you as the seed-atom.
- (c) The atoms of the 7th plane drawn into the orbit of the seed-atom and constituting its 7th plane body.

Chapter XIV. The Seed-atom Building a Seventh Plane Body.

We have traced the development of a three-part unit of evolution, and you will see that three is again the number of manifestation - three Rings to the Cosmos - three aspects of an universe - and also three factors to a unit of consciousness.

These units of consciousness are each separate in so far as the seed-atoms, and those atoms of the 7th plane matter which surround them, are concerned.

The seed-atom and its surrounding envelope forms a definite system of stresses and reactions which are intercompensating. In their reactions to each others' stresses they have achieved an equilibrium, and therefore become an unit.

A unit is that set of interacting forces which have achieved an equilibrium and thus become stabilised.

Such a stabilised set of interacting forces, which have achieved a definite rhythm of compensation, will react in unison to any outside influence, and, as no part of such a compensating system can be affected without affecting all the rest, and causing them to react, it will be seen that such an association functions as a unit.

With regard to the tracks in space, however, which have received the Logoidal impress (and may now be referred to as Divine Images - reflections - Sparks from the Cosmic Fire - and will be referred to as Divine Sparks) the case is different.

Let us take a single Divine Spark and study its nature. It is exposed to three sets of influences:-

1. The experiences transmitted to it by the seed-atom.
2. The influences of its fellow Divine Sparks.
3. It is 'en rapport' with the Logos. It is aware of the

Logos, and the Logos is aware of it. These influences are constantly changing in rhythms of different wave lengths, and the Divine Spark endeavours, by means of compensatory stresses, to blend all these into a regular tune.

The Logoidal influences change with the Cosmic Tides, which are very vast. The influences of the seed-atom are incomparably speedier, and the Divine Sparks, its fellows, are all reacting without correlation to each other.

The Cosmos phases reflected by the Logoidal Mind form the first great stabilising influences, and the warring Sparks settle down to the tides of positive and negative phases, and gradually relationships are established, stresses are adjusted and compensated, and all Divine Sparks become correlated among themselves in a 'give and take' of reactions. When this takes place, then evolution has reached its zenith.

Upon the 'abstract' aspect they present a perfect replica of the Logos at that stage of its evolution. And upon the 'form' side of things, a geometric form is presented built out of the atoms grouped about the nuclear seed-atoms, and this form is that to which the lines of force give rise, just as the crystal is a geometric form constructed by particles of matter arranged about lines of force. And as the Cosmos was built up out of three inter-revolving Rings, the Logoidal symbol is spherical. And as the number of prime manifestation is three, the symbol of the first globe is a three-sided figure - a three sided pyramid within a sphere.

You will thus perceive that the first planetary form has been evolved.

Upon the Cosmic aspect of things the position has been arrived at in which a Great Entity has developed a satellite.

The Great Entity is aware of its satellite. Its consciousness conditions its satellite; and its satellite is aware of the Great Entity. But, though the collective consciousness of the satellite is influenced by the Great Entity and therefore there is reaction between Entity and satellite, it is not conscious of the Great Entity with its collective consciousness but with innumerable individualised consciousnesses whose collective consciousness is merely aware that they are aware, which is quite a different matter.

There exists, then, in the satellite, a collective consciousness which is self-conscious; aware of the conditions of its own existence as a satellite; and innumerable individual consciousnesses which are aware of the conditions in the group of atoms gathered around the seed-atom with which they are associated but which are unaware of the conditions of groups of atoms gathered around other seed-atoms, and which are also each and separately aware of the Great Entity.

The consciousness of the Great Entity towards its satellite resembles the sight of a human eye, but the consciousness of the satellite towards the Great Entity resembles the sight of a spider's eye - innumerable facets reflecting innumerable images which have to be focused in the brain. The brain correlating to group consciousness. When all the Divine Sparks are perfectly adjusted to each other so that there is perfect reciprocity of reaction throughout their mass, then there is a collective consciousness which focuses the images of the facets. When this is achieved there is reciprocal consciousness between the satellite and the Great Entity, because they meet on equal terms.

The form of the satellite has been determined by the Great Entity's concept of itself, apart from the constructive consciousness of the units composing it; and now the Divine Sparks, having attained reciprocal reaction, have achieved a collective focused consciousness and this consciousness functions as a unit and is therefore capable of objective consciousness, and the only object of its own plane within its sphere is the Great Entity.

Now the Great Entity, being aware of the consciousness of the satellite, is aware of the content of consciousness, which is the sum total of the satellite's experiences, developing, which have already been recounted.

The Great Entity, then, has become aware of the evolution of a satellite, and this introduces a new factor into the consciousness of the Logoidal Mind, and this factor has to be assimilated to the rest of the content of consciousness, and as stability has been reached by the satellite and it has attained to a regular rhythm, the monotony of the stimulus causing the attention of the Great Entity to be withdrawn from it and consequently free to attend exclusively to the assimilation of the new factor which it has received into its consciousness, and the satellite, being thus without external stimulus, sinks into sub-consciousness and thereby stereotypes its reactions.

The Great Entity then, has sunk into subjective consciousness and is actively engaged in assimilating the new factor, and again achieving a synthesis of consciousness.

During this process all its forces are indrawn. It radiates nothing. It no longer holds its universe in consciousness.

Therefore the universe is only held together by the self-consciousness which that universe itself has achieved during the inturning of the attention of a Great Entity in the process of assimilating the new idea presented to it by its universe.

The universe is left to its own devices and therefore does not progress or change but constantly repeats the rhythm at which it has arrived, and thereby stereotypes it, so that the equilibrium of forces, at which it had arrived at the time of the indrawing of the Great Entity's attention, becomes set into form.

The Great Entity, having thoroughly grasped and assimilated the new idea thus presented, in this case the idea of a three-fold unit - of a travelling atom with a consciousness upon one side and an enveloping body upon the other - rouses itself from its introspection to the contemplation of a universe fashioned upon this model.

The units of consciousness developed in the satellites are at once aware of the new stimulus. They are aware of the idea of action and reaction between a directing mind and an attached body, and

upon this archetypal concept they proceed to evolve.

Thus a new set of stresses is set up which oversets the equilibrium established in the group mind of that satellite, and therefore all the units composing that satellite are dispersed and set out to follow the path again of the wandering atoms but plus a Divine Spark of consciousness and a 6th plane body.

The form of the archetypal satellite, however, which became stereotyped during the inturning of the Logos, remains as an archetypal form. This you may conceive as circling about the Logos upon the 7th plane.

The Divine Sparks, having progressed outwards as far the 6th plane, by their rotary movements gather around themselves new bodies of the 6th plane matter, and the process is repeated precisely as before, viz:-

- (a) The re-synthesis of the Sparks.
- (b) The establishment of the compensating reactions, which constitutes group consciousness.
- (c) The reciprocal reactions of the group consciousness and the Logoidal consciousness.
- (d) The in-turning of the Logos to assimilate the new idea.
- (e) The stereotyping of the reactions of the satellite by repetition.

But there is this difference in the present case.

During the time that the evolution of the first satellite was proceeding there was nothing in existence in the universe, save the Logos, the satellite, and the planes of atoms. But during the evolution of the second satellite the first was undergoing a new phase of development.

The Logos, having realised the possibility of an endowment of atoms with the Logoidal likeness, thinks of the atoms in this way, and the atoms become thus endowed.

Now the atoms of the 7th plane, as of all other planes, are continually undergoing a backwards and forwards tide-like movement, as the positive Logoidal phases draw them towards the centre, and the negative Logoidal phases thrust them outwards.

And as the attention of the dim consciousness of the atoms is raised, in the positive phase of the Logos towards itself (for remember, that place in a projected thought-form universe, really means state) they receive the imprint of the Logos' concept of them, and they are thus caused to vibrate in the same rhythmical tunes as the first evolving atoms had, at the time when the Logos became aware of their content of consciousness.

That is to say, at the conclusion of their evolution. The new evolving atoms thus start where the old ended. By the archetypal forces of the first satellite they are speedily sorted into the same formation as their predecessors, rapidly recapitulating their development.

They have, then, but to arrive at a synthesis of reaction, which is collective consciousness, to become conscious of the Logos, and the same process is repeated as in the previous case.

The first swarm of atoms, having completed their evolution in the second satellite, as already described, issue forth and undergo a third evolution upon the 5th plane.

The second swarm in the first satellite proceed likewise by the same path to the 6th plane and are there caught up and organised by the already existing set of archetypal forces left behind by the first swarm. Meanwhile, as the swarm of atoms has been sent by the Logos to people the first satellite, the Logos now thinks of atoms as having two enveloping shells, and so the new atoms are endowed with a capacity to gather about themselves matter of two planes.

Thus the process goes on until the first swarm of travelling atoms each surrounded by an envelope of the matter of each plane upon which it has evolved, has built up a satellite upon the 1st plane, and each preceding satellite is peopled by hosts of Divine Sparks, each of which has built itself an envelope or series of envelopes according to the state of evolution at which it has arrived.

But the first swarm of Divine Sparks, by the inherent forces of their natures, have devised themselves forms, the Logos has become aware of the fact and has sent out each succeeding swarm with the achievements of the first swarm implanted as archetypal ideas in their consciousness. That is to say, that whatever rhythms have been achieved are impacted as vibrations in each successive swarm.

This is what is meant by Involution. Evolution is the expression of these in the matter of whatever

plane it is upon which evolution is proceeding.

It will thus be seen from the foregoing, that in time, all the 6th plane atoms will undergo this process.

You will note that, just as the symbol of the satellite upon the 7th plane was a sphere with a three-sided solid figure - a pyramid with triangular sides.

The 6th plane is a four-sided figure, a cube - and so on down the planes.

The 5th plane has a five-faceted figure.

The 4th plane has a six-faceted figure.

The 3rd plane a seven-faceted figure.

The 2nd plane an eight-faceted figure.

The 1st plane a nine-faceted figure.

You will see that the numbers add up to ten, and that nine is the number of the sides of the facets forming the figure which symbolises the forces of the first plane. Therefore 3 times 3 is the perfect number in the first plane.

Ten is the number of forces in manifestation for our universe but nine is the number of the Cosmic force which called that universe into being when that force is manifested on the 1st plane.

Chapter XV. Evolution of the First Planetary Form.

In the previous lecture the evolution of the Divine Sparks was traced, from the time wherein all those of the same type gathered themselves together and formed a group consciousness. We then traced the phases of the developments of these groups from one plane to another on each plane, adding a shell of the atoms of that plane to the concentric layers of atoms revolving about the nucleus of the original travelling atom, until finally upon the 7th plane we find seven shells about the central nucleus of the Divine Spark.

The relationships of the seed-atom, the travelling atom, and the seven shells are complex, and must receive further elucidation before we proceed.

The travelling atom is a projection, not of the Logos, but of the Cosmos. It is thus at the same time more primitive and more closely related to the ultimate source of existence than a projection of the Logos could be.

The Logos projects the general framework of forces and phases which condition the universe as a whole.

The Cosmic atoms, which have come under the influence of the Logos, project the innumerable units, which the Logoidal concept binds into an aggregate.

The Cosmic atoms are really younger brethren of the Logos - Cosmic units themselves that have not reached the development which the Logos has reached, but are of the same type. Therefore each atom of a Logoidal universe is, for this reason, a potential Divinity.

Remember now, that movement is the basis of all things. Abstract movements, which are opposed, lock up force and render it static - fixed. It is these locked up forces which become 'form'. A form is simply a force which is not free to move.

Any series of changes which are completely compensatory settle down into a cycle of action and reaction. As soon as such a cycle is established it cannot change its mode of motion, and therefore a force is locked up, not in a motionless point, but in a spinning Ring. The points are units. The Rings are organisms.

Either a unit or a Ring, when once established, can move as a whole, and when this movement of an object takes place there are two factors present, the object which moves, and the movement it makes.

The movement, apart from the object, is of the same nature as the movement which gave rise to the

object. Whenever you get an unco-ordinated movement, such as the tangential movement of atoms before they are co-ordinated, there is permanency of rhythms, and therefore no form is created. But as soon as compensatory co-ordination is established, forms of abstract movement are built.

This principle applies to many considerations, and is therefore elaborated here in order that it may be available for future reference, and when the abstract archetypes of anything are referred to, you will know that it is this replica of a rhythm that is impacted on another plane as a vibration which is referred to. This is the key to the nature of memory.

Before proceeding further with the study of the evolution of the Divine Sparks, we will refer to the evolution of the archetypes of the globes or satellites, whose origin has been described.

The unifying of the Divine Sparks into a group consciousness gave rise, as aforesaid, to the organisation of their attendant atoms into corresponding geometrical form.

After the dispersal of the atoms the archetypal form remains, according to the law above described. This form is a miniature reflection of the Logos, under that aspect in which it is presented to its universe, that is to say, a system of stresses.

This system of stresses organises the atoms of the plane of which it is, into its framework, and this equips itself with a definite form. There will then exist, in addition to the evolutionary swarm of Divine Sparks, a Planetary Spirit with a spherical body, built up on a framework of stresses, and this Planetary Spirit will be profoundly imbued with the type of activity and organisation that was the characteristic of the swarm of the Divine Sparks during that phase of this evolution when they occupied its sphere.

When the next swarm comes to this phase they find that their evolution has to take place in relation to the Planetary Spirit which is the Lord of that sphere, because it is the dominating influence thereon. They will, therefore, find ready made the conditions which their predecessors had to evolve, and they will start therefrom upon their own evolution.

Each one, being equipped with a shell of the matter of that plane, will, from this basis, proceed to gather about it a shell of the matter of the next plane. For remember, that although, in the Cosmos, the planes are extended in space, being based upon movement, in a universe the atoms of the planes are not extended in space, being the products of an image held in consciousness, but are differentiated in type.

It will thus be seen that the Divine Sparks do not have to change their place in space in order to gather atoms of another type about them, because atoms of all types are everywhere, but they merely have to change their mode of motion in order to produce a type of movement in which the atoms of another plane can take part.

Whenever the co-ordination of movements takes place which changes a static unit into a spinning Ring of cyclic rhythm, such a change takes place, and a cyclic rhythm always gathers about itself atoms of the plane below its own, because its movement approximates to theirs.

For instance, as soon as a prime atom moves along a tangential path it becomes a tangential atom. But supposing an organisation of prime atoms moved along a tangential path, they would form a tangential molecule, and being larger than tangential atoms, would form a centre of attraction for those atoms, and would collect a shell of attracted atoms about them.

That is how all shells are built. To return, however, to the evolution of a Planetary Spirit, it will possess, to begin with, merely an organised sphere of the atoms of the plane on which it originated, and when the new evolutionary swarm of Divine Sparks reach it, they would find themselves with 7th plane bodies on the 7th plane planet. But in the course of their evolution in that planet they will build themselves 6th plane shells, and they will co-ordinate their consciousness of these shells into a group consciousness, and when they depart on their evolutionary journey, they will leave this group consciousness as an archetypal form in the consciousness of the Planetary Spirit, and this archetypal form will gather 6th plane atoms along its line of force, and the Planetary Spirit will now have two bodies, because they are organised.

This process is repeated with each fresh phase of evolution, until each Planetary Spirit has achieved its full complement of bodies and is, therefore, able to take a swarm through the full circuit of evolution. But as each Planetary Spirit is profoundly imbued with a type of activity which the

swarm was engaged upon when its form was a building, each Planetary Spirit represents a different phase in evolution.

They are therefore all different in character, and the evolutions conducted exclusively upon them have each a corresponding dominant note.

For instance, on a 7th plane planet, the characteristics of the 7th plane will dominate all forms developed thereon. The prime rhythm of that plane will be the key note, and all subsequent rhythms will be multiples of it. In a planet upon the 1st plane, the prime rhythm will be likewise the rhythm of that plane, but that rhythm, being a maximum rhythm, all subsequent variations will be fractions of it, and on the intervening planes the prime rhythms will be as a decimal point.

You will note that a swarm in evolution on a planet starts with the same number of bodies as that planet has, and builds an additional one in the course of its evolution, thereby endowing the planet with another body, until the maximum of seven is reached, and then devolution sets in wherein planets and Sparks divest themselves of bodies. That subject will be dealt with later. You will also perceive that the order of evolution in a universe is the opposite of the order of evolution in the Cosmos, because a universe is reflected from the mirror consciousness of a Great Entity.

Abstract movement gives rise to forces in the Cosmos. Forms give rise to abstract movement in a universe, and thereby link themselves on to the Cosmos, of which more later.

It is therefore essential in a universe, to have a form in order to evolve to Cosmic level, thereby enabling them to link themselves on to the Cosmic atoms that gave rise to them, thereby making these Cosmic atoms into Great Entities. Thus do the atomic planes of the Cosmos evolve.

This is the secret of the God in man. He is related primarily, not to the God of his universe, who is his conditioner, but his Creator who is a corresponding atom in the Cosmos, who creates but has no power to condition, because it is itself conditioned by the Great Entity of which it forms a part.

But when the reflected atom of a universe develops a corresponding aspect to the nature of its Creator and can thereby unite with it, that Cosmic atom receives into itself all the conditions of the universe which was projected by the Great Entity of whose body it forms a part. And, as that universe is conditioned by the Great Entity, the Cosmic atom thus becomes a replica of the Great Entity, and being thus completely conditioned by it, is no longer being conditioned but has been conditioned, and therefore its conditioning is of the past, and therefore in the present is unconditioned by the Great Entity, because it has achieved a state in which it conditions itself, and so is independent. It is made free of the Cosmic planes - is no longer held in bondage to the service of a Great Entity, but by means of this attachment of an evolved atom of a projected universe, it is raised above the status of the atoms of its plane, and becomes, in its turn, a travelling atom, and together with its attached Divine Spark of the reflected universe, it makes the rounds of the Rays of the Cosmos, and thus, in its turn, becomes a Great Entity and develops a universe.

This is the goal of the evolution of every reflected atom in a universe - to develop a Divine Spark - to complete the evolution from the human to the Divine in a reflected universe, and to unite with its Cosmic Creator, thus enabling the Cosmic atom to evolve through the phase of a travelling atom into a Great Entity.

It is this scheme of evolution which we are now considering. These last details have never been revealed before. Human thought has never before passed beyond the conditioning Logos, but it is now revealed that, though the Logos is the Creator of an universe, each atom in that universe is separately created by a separate Cosmic atom, which aspires, by means of that reflected Life, to achieve a state whereby it can continue its own evolution.

Therefore, it can be said of man that, by eating of the Tree of Knowledge, they should be as Gods. It is this knowledge which has been withheld on the outgoing path of evolution lest souls should be tempted to turn back and forestall their goal, but to those who passed the nadir, it can now be revealed.

Chapter XVI. Evolution of the Lords of Flame, Form and Mind.

We are now in a position to reconsider in greater detail the evolution of a Divine Spark. Let it be noted, to begin with, that the first swarm of Divine Sparks, differs from its successor in many respects.

To begin with, the first swarm is composed of the travelling atoms of the universe.

Secondly, these Divine Sparks are subjected to no other influences than those of the Logos itself. Because, satellites not having been developed, they are not exposed to the influences of the Planetary Spirits.

Therefore the Sparks of the first swarm have the Divine Image impressed on them in all its purity, unblurred by other influences.

There is an absence of cross currents in the influences which play upon the first swarm which causes them to attain to the Divine Ideal with much less stress and effort than their successors. In their composition the influences of the Cosmos predominate. Each subsequent swarm, however, performs its evolution in a more highly evolved universe, and therefore the influences of the Cosmos find a potent rival in the influences of the universe.

Another point in which the evolution of the first swarm differs from the evolution of any subsequent swarm is this - the first swarm gathers the material out of which their bodies are made from the undifferentiated atoms of the plane on which they evolve, they thus carry on these atoms with them to the next globe of their evolution, and so on throughout the planes. So that upon each globe upon which they evolve the potentialities of reaction corresponding to all the planes above it in the universe are established, by the methods previously explained.

These Divine Sparks, thus passing down the planes leave behind them a series of Archetypes, and when they pass back up the planes by a method to be described hereafter, they become the Powers and Potencies who conduct the evolution of their successors. These are the Lords, the Principalities, the Regents of whom you have heard.

The method of evolution of the subsequent swarms differs from those of the Archetypal Sparks.

The Logos, having received from the Archetypal Sparks the concept of their evolutionary achievement, impacts this upon the Divine Sparks of the second swarm, by the method of vibration previously described, so that they start out on their evolution with the innate capacities for reaction laboriously built up by their predecessors, and find themselves under the influence of a sphere of forces which the activities of the atomic portion of their predecessors formed into the sphere of a satellite.

They, in their turn, collect shells of the matter of the plane about their vortices in the course of their evolution.

But there is this point of difference, that they have not got to build a group mind out of their consciousnesses. They have merely got to attune themselves to one which already exists. They have got to become at-one with their sphere, which includes the influences of the previous swarm, as well as their own swarm, and not merely at-one with themselves.

When this at-onement is achieved and the Logos has contemplated the result and turned inwards to his subjective meditation, these Sparks do not continue in the sphere of the satellite, as did their predecessors of the first swarm, but, the Logoidal attraction being withdrawn, the mass of the globes upon the next plane attracts them, and they are disengaged from the centripetal forces of the globe on which they are, and pass onwards.

Upon the next globe they take up the next phase of their evolution in precisely the same way as their predecessors. Again recapitulate their predecessors behaviour, up to the point of departure, to the 5th plane globe.

Here a change occurs. The second swarm, having arrived at the second globe of their evolution, do not pass on to the third immediately, but are now exposed (the Logoidal attraction being withdrawn into the subjective state) to two sets of planetary influences - those of the 1st and 3rd globes (the

first swarm always keeping a globe ahead of them). They are therefore pulled two ways, and this conflicting influence is sufficient to overcome the attraction of the individual atoms for their atomic shells. The atomic shells then fall to pieces, and return to their original condition as atoms of the plane to which they belong, but, though they are freed from the influence of the Divine Sparks, they are immediately caught up by the influence of the forces of the sphere in which that evolution has taken place, and are retained therein.

Thus upon the 6th plane a Planetary Spirit will have, not only the 6th plane atoms held along its line of forces, but also the 7th plane atoms shed by the Divine Sparks. A Planetary Spirit, be it noted, is really the Group Spirit of the life that evolves in its sphere.

The Divine Sparks that are thus robbed of their atoms, are reduced to their original state of a 7th plane atom attached to a Divine Spark, and in this state consequently re-enter the sphere of the manifesting of the Unmanifest, which, in an universe, corresponds to the Central Stillness of the Cosmos, and therein they receive anew the impress of the Logoidal Image, plus the fruits of the evolutionary achievements of the Archetypal Sparks. The Archetypal Sparks being always a plane ahead of their evolution.

The second swarm Sparks always start out on their new round with the potentialities of reaction of an additional plane. As they pass out through the phases they therefore gather about them the matter of each plane they pass through, forming it into concentric shells, as has been previously described, until they arrive at the 5th plane. There they build up a shell of 5th plane matter with the influence of the 5th plane planet, and repeat the process of assimilation to the Group Mind, the shedding of the shells, and the return to the Centre.

It will now be perceived that there is a fundamental difference between each swarm. The first swarm is engaged solely with magnetic action and reaction and vibrations, and they are called in the technical terms of Occultism, "The Lords of Flame". The second swarm are concerned with the building of matter into the form of the Planetary Spirits, and they are called "The Lords of Form". We will now deal with the third swarm. They issue forth, as before -7th plane atoms, stamped with a Logoidal Image of a more evolved type than either of their predecessors, because the Logos has evolved by means of the evolution of their predecessors. They proceed to the planetary sphere of the 7th plane, and herein the difference of their evolution from their predecessors becomes apparent, for they do not collect the matter of the sphere to form a body, but use only that matter which is under the influence of the Planetary Spirit in whose sphere they are evolving, and as this matter is accustomed to react to an Ensouling Divine Spark, it is much easier to manipulate than the matter of space. Therefore evolution is more rapid. But as these Divine Sparks cannot advance to the globe beyond that upon which they are evolving until the preceding swarm has moved on, they are compelled to remain upon the globe of their evolution after they have exhausted its possibilities of reaction, and the superabundant energies, to whom the evolving channel is closed, make play among themselves.

This is the first instance of free-will within the Cosmos, and its resultant activities building individualised reactions into atoms, is called epigenesis.

This is the first occasion on which the atoms are differentiated one from another, and this leads to the applying to this swarm of the name "Lords of Mind", because individualised experience is the basis of personality.

It will here be seen that a new evolving principal is introduced, which is that the checking of progress in one direction by preventing it from becoming more elaborate upon the original type, lifts, or sublimates it to a new aspect. If, however, the checking be too long continued it would cause it to revert to a more primitive type. This, however, cannot occur at the present phase because the synthesis of forces upon these planes is perfect, but is merely referred to in passing in order that the correspondences may be seen. The process of evolving a new aspect of a checked force is called sublimation.

The process of returning to a simpler type of evolution is called degradation, and is always harmful, because the capacities of reaction acquired at a more advanced level cannot be controlled or checked by the governing forces of a more primitive state, and develop an extreme individualism,

thus breaking up the synthesis of force on the plane on which they find themselves.

You will, of course, perceive that it is the same type of process which sets free a travelling atom for its evolution to a higher state of existence. But a travelling atom has completed the circuit before it undergoes this experience, and may be termed "The Child of the Cosmos" - or "The Universe" - as the case may be; born at full term. And the regressive, or degraded atom is born out of due time - an abortion. If it lives at all, it lives as monster. This is the origin of certain types of devil.

These matters will be dealt with fully in their proper place, and are merely referred to here in order that the correspondences may be seen.

Fortunately the balance at this phase of evolution we are discussing is perfectly adjusted, because the influence of the Logos is the only influence in the universe. Therefore, no such retrogression can take place among the primal swarms. It is to epigenesis in a transition state that we owe the origin of evil in a universe.

Thus the swarms pass on. The Lords of Flame leaving behind them galvanic stresses of all types. The Lords of Form leaving behind them a sediment of atoms which are built into great spherical shells by the galvanic stresses, so that each plane is dominated by a set of galvanic stresses which develop into a Planetary Spirit. And a set of the shells of the matter of other planes held into a form or body by that Planetary spirit, which develop into a planet, as known to Astrology. But be it noted, that each planet, although it ultimately possesses matter of all seven planes, has a Planetary Spirit formed of the stresses of the plane on which it is.

Thus the Planetary Spirit of the 5th plane would be an abstract mind, and the Planetary Spirit of the Earth is an etheric double.

We have now traced the three primary swarms of the outgoing arc, and you will see how each carries a new factor from plane to plane.

The first swarm - the Lords of Flame - do not return to the central point of manifestation until they have completed the Round. Have been down the planes, and back up the planes, and have thus completed their evolution. The second swarm, or Lords of Form, only return to the central point of manifestation after they have recapitulated their evolution and mastered an additional plane. That is to say, in their first outgoing, they progress through two globes and return. In their second outgoing - through three globes and return, and so on. Always following on the wake of the first swarm, with whose evolution they synchronise. Because, as soon as the first swarm has achieved a new factor, the Logos assimilates it, and enters a subjective phase to do so.

During that phase, as previously said, the universe is left to its own devices. The first swarm, upon its globe, settles down to stereotype its reactions, and it is the influence of that organised globe in an otherwise unorganised universe, which breaks up the shells of the second swarm in the preceding globe and so sends them back to the central point of manifestation.

Likewise the progress of the third swarm is synchronised, because they have to wait for the second swarm to withdraw from a planet before they can advance to it. The evolution of the first swarm is slowest because it is all original work for them. The second swarm occupy much time in their evolution because they are constantly recapitulating, and gathering up and breaking in, new matter of the different planes, and therefore synchronise well enough with the progress of the first swarm. But the third swarm has much of its evolutionary work already done for it, and therefore has to wait. Hence it elaborates itself.

Elaboration means differentiation, and differentiation means Personality.

Chapter XVII. The Influence of the Regents upon the Globes.

Having traced the evolution of the Lords of Flame as far as the 7th globe, which they form upon the

1st plane, we will now trace the course of their return to the centre.

It will be perceived that, by their nature they have built those systems of magnetic stresses which constitute the framework of the globes, and are afterwards elaborated into Planetary Spirits. On their return journey they travel back along the line of globes by which they came out. There is this difference, however. Instead of building themselves a form in the matter of that plane they find the form already built, but they also find it inhabited by the succeeding swarm of Divine Sparks who are undergoing evolution thereon.

So that, on the 6th globe, two sets of lives are being lived. The second swarm on the outward arc, and the first swarm on the arc of returning.

The first swarm, entering into the already prepared Group Mind have subjective consciousness.

The second swarm, engaged in building a Group Mind, have subjective consciousness only.

Therefore, they are not aware of their companions of the first swarm who also inhabit this globe, though they live in their influence; which has the effect of imparting to the shells of the matter of that plane, which have formed about the Divine Sparks, the same type of vibration as the seed-atoms of the first swarm are themselves vibrating to.

This is the familiar phenomenon of the impactation of a cyclic rhythm inducing a vibration.

When this condition has been arrived at, the second swarm, being able to vibrate to the same rhythm as the first, become aware of the members of the first - not by direct perception, but by perception of the changes of the outermost shell induced by the presence of the first. This, however, does not occur until the end of the period of evolution whereupon both swarms quit that planet; the second to advance to the 7th globe, and the first to return to the 5th.

In addition to the influence they exert upon their fellow sojourners in a globe, the first swarm have certain evolution to undergo on their own account. On their outward journey they have collected to themselves shells of each plane, which they have not shed but have carried out with them. And on the return journey each shell forms a means of reaction to the matter of each plane on which they find themselves. Being capable of both action and reaction these form vehicles of manifestation and means of perception.

Thus the indwelling Spark is able to act on, and react to, the matter of each plane on which it finds itself, and, though it carried out its evolution in the sphere of attraction of the globe on that plane, it can yet extend its activities a certain way beyond the sphere of the influence of that globe.

This is a point whose significance will be seen later. Upon each globe, upon the return journey, the Sparks of the first swarm exercise their influence upon the shells that are be-gathered about the Sparks of whatever swarm they encounter there. Upon the 6th globe they meet the second swarm. When they themselves depart to the 5th globe, the third swarm advance to the 6th globe, and so on. They just miss each other.

So that the third swarm is distinguished by this peculiarity it never meets the Lords of Flame. It never encounters an evolution higher than its own, and therefore its predominating influence is that of the Logoidal Image, and of the production of its own epigenesis. That is why Mind has so much freedom as compared with Form or Force.

It will be seen that, as each swarm meets the Lords of Flame on a different planet, it is a different shell that is influenced by them. This accounts for the differences in organisation of the vehicles upon the different waves.

It is a point closely connected with practical magic, because whatever body has received the impress of the Lords of Flame, that body will be used in working upon Nature Forces.

The Lords of Form likewise, when developing upon a globe, exert a similar influence upon their fellow sojourners there, but being peculiarly and intimately related to the matter of that globe, their inter-reaction with the shells of the Sparks of the junior swarm is peculiarly intimate.

When, however, the Lords of Mind have passed the nadir and begin to return up the globes, conditions of evolution are much complicated, because the freedom of individual action of the Divine Sparks has been enormously developed by successive periods of epigenesis, and in their diversity of reactions they produce the diversity of development in the swarms they contact.

Chapter XVIII. The Goal of Evolution of a Life Swarm.

We have traced the progress of the first three Life Swarms as far as the 1st plane. We will now trace the mode of their return up the planes.

It will be recalled that the Lords of Mind complete the full cycle before returning to the sphere of Divine influence wherefrom they issued.

The Lords of Form evolved by means of a gradually lengthening series of journeys. In the first journey they progress as far as the 6th plane and return again to the sphere of Divine influence. On the second journey they progress through two globes to the 5th plane, and so on down the planes until, on the 6th journey they reach the 1st plane. It will thus be perceived that upon the seventh journey of their outgoing they have already within themselves the capacities of reaction of all the planes and have nothing further to acquire in that respect. They have, however, to learn the lessons of the return journey, which will be dealt with in their place.

The evolution of the Lords of Mind resembles that of the Lords of Flame in that it is a continuous journey, but at each pause, while they wait their turn for progress, they make original additions to the sum of factors of their reactionary complex.

It will have been noted that, from the time the first swarm set out on its homeward journey, two evolutions will always be progressing in a globe at the same time, and the senior evolution profoundly influences that aspect of the junior evolution which corresponds to its own nature. This is the prototype of the process known as Initiation.

These matters cannot be dealt with in detail until other aspects of the subject have been considered. They will then be reverted to.

It will be remembered that upon each plane the Divine Sparks acquired a fresh mode of reaction. They learnt of a plane, but were limited by the conditions of that plane. Upon the return arc they are not seeking to penetrate into, and master the conditions of a fresh plane as a means of evolution, but to withdraw from a plane and thus to free themselves from its limitations, while at the same time retaining the capacities for reaction they learnt thereon. This freedom can only be obtained after the complete synthesis of reactions of that plane has been achieved by the Group Spirit of the swarm. The synthesis is so complete that the reactions, being mutually compensating, become automatic, and demand no individual compensating.

Habitude renders them sub-conscious, and the consciousness of the Sparks, being directed to the reactions of a higher plane, they function according to the type of that plane, and their reactions are such that the atoms of the lower plane can no longer accommodate themselves thereto and therefore are dispersed. In this way the Lords of Flame withdraw up the planes.

The Lords of Form progress by a different type of evolution. For each lesson they learn they teach to the Logoidal consciousness before progressing further, and they await the impact of the Logoidal Image which is the evolutionary impulse which sends them forth on their journey. When they have been out to the uttermost plane and returned for the sixth time they have given their final message to the Logoidal consciousness; and the seventh journey, which, as far as they are concerned is a repetition, can add nothing anew to the Logoidal consciousness. It is their function, however, upon each globe to make a contribution to the forces of formation in the manifested universe. Their essential type of reaction is the stereotyping of forms and they influence profoundly the atoms that are built into the plane body of the Planetary Spirits of each globe.

The Lords of Flame influence the evolving Life Sparks of each globe they are on.

The Lords of Form leave them untouched, but influence the globe itself.

Were it not so this stereotyping of form would prevent evolution in the Divine Sparks. As it is, the stereotyping of form in the vehicles of the Planetary Spirits has determined in them the most primitive type of vehicle of manifestation - the sphere - an inorganic accretion of matter around a nucleus of attraction.

It is the Lords of Mind, however, who exert the predominating influence on the swarms they

contact on each plane, because, owing to the fact that they have achieved individualisation, they are able to act upon individual Sparks and are not merely obliged to influence a Group Mind through a general atmosphere.

It is a peculiarity of all vibratory objects that they tend to tune with their own vibrations all objects of a slower rhythm than themselves, being only limited in this activity by the vibratory capacity thus influenced. And whereas the Lords of Flame were limited in their power to raise vibratory activities by the sum total Group reaction, the Lords of Mind, (should individual junior sparks show special reactionary capacities) are able to raise them individually. The sparks thus developed exercise a profound influence on the Life swarm of which they form a part, for they are Initiates.

On the outgoing arc of evolution Initiation is performed by contact with the Life of a swarm on the returning arc.

Thus Initiation enables the Initiate to cut across the arc of evolution, and to obtain the reactionary capacities by sympathetic induction, instead of the lengthy process of experience.

Initiation on the returning arc is, however, a different process, which will be considered in due course.

The function of Initiates on the outgoing arc is to enable their swarms to adapt themselves more speedily to the condition of a newly achieved plane, because they have acquired some concept of the nature of these conditions. Thus Initiation on the outgoing arc enables an Initiate to immerse himself more readily in matter.

Let us now consider the condition of the first swarm when it returns once more to the sphere of Divine influence.

It issued forth as a cloud of Sparks. It returns as an organised set of magnetic, capillary, mass-momentum, centrifugal, centripetal, and vertical stresses.

The Logos is then confronted by an organisation that approximates in influence to its own.

Whatever reactions the Logos may impose upon its universe will encounter the organised opposition of the first swarm. The Logos, however, works not in opposition to that which it has itself created, but acts as a synthesiser between the Cosmos by which it is influenced, and the organisation which now forms a conditioning influence in its universe. By its perception of this organisation a corresponding image rises in its consciousness, and the Great Entity is thus conditioned by the conditions of its universe, and therefore all Cosmic influences are transmuted under the influence of that conditioning before they are communicated to the universe.

The Logos has now acquired the same reactionary capacities, by contemplation of the evolved swarm, that the swarm acquired by experience of the planes. Therefore the Divine Entity and the Divine Manifestation vibrate synchronously and are at-one; and, after a period of compensating action and reaction, they evolve a rhythm. The Logoidal vibrations are extended to the Group Spirit of the swarm, and the Group Spirit of the swarm is absorbed in the consciousness of the Great Entity.

The individual Sparks, however, maintain their individuality but their Group Spirit is no longer a separate Entity but has become at-one with it, and therefore it is at-one with the Logoidal consciousness, so that the oversoul of the swarm is the Logos itself.

This is the goal of evolution of a Life swarm, the at-one-ment of the Group Soul with the Logoidal consciousness, whereby the Logos received the fruits of the evolution.

It may now be asked 'Whither go the Sparks?' In the case of the Lords of Flame they are so completely withdrawn from the manifested universe that they cease to be upon the planes of manifestation but remain at the central point of impactation, maintaining a balancing action and reaction between the Manifest and the Unmanifest. Some, however, succeed in making contact with their corresponding Cosmic atoms and these pass out of the sphere of Logoidal evolution to experience the life of a Travelling atom in the Cosmos. Those that do not so proceed remain as conditioning influencers in the universe and, being at-one with the Logoidal Mind, are able to execute the Logoidal Will. The forms which they built in the course of their evolution form part of the framework of the universe, and as such, are stereotyped. But, whenever the Logos desires to

effect compensatory actions in response to the unco-ordinated responses of an evolving universe, it is by means of the Lords of Flame thus freed from the bonds of manifestation that this is achieved. "And He made His Ministering Spirits a flame of fire" and "Flames of Fire were His Ministering Spirits". The Lords of Flame are concerned in basic Natural Forces.

The Lords of Form likewise, on completing their evolution, undergo similar adjustments, and when the Logos, having received a new concept from an evolving swarm, desires to impress an archetypal concept upon a swarm in process of evolution, it is the Lords of Form that are employed for the process. Their method we will study later. The Lords of Mind likewise, upon their return, are assimilated to the Divine Consciousness, and employed as Mediators between the Logos and His universe.

Now be it recalled that the Lords of Mind established individuation, and they deal essentially as individuals with individuals. Whereas the Lords of Form deal with Group Souls.

The Lords of Mind are the Initiators of our present evolution and as such, will receive much reference in the course of these teachings. They it is, who, able to react upon all planes of manifestation, range up and down the planes, performing adjustments by exercising compensatory stresses when the faculty of epigenesis has disordered an evolution.

Upon a plane where they function they are simply a centre of force, therefore they are unperceived by the denizens of that plane. They can, however, by the assistance of a vehicle of that plane, detach certain elements to form nuclei for the building of vehicles in the matter of that plane. Hence the concept of the Virgin birth. And therefore it is that those who are known as the 'Saviours' are always represented as born of agamogenesis. They bring their own life impulse. Nothing but the accretion of matter is required for their manifestation.

In this outline we have traced the development of a manifested universe up to the point where the Divine Sparks of the prime swarms have returned to the Logos - achieved at-one-ment and function as intermediaries between the Logos and His universe.

It will be recalled that the Logos has three prime aspects. Each of the three prime swarms was projected into manifestation under an impulse of one of the prime aspects of the Logos and may therefore be regarded as the representative of that aspect to the universe. These three prime manifestations are of a different degree to all the others.

Subsequent Life swarms develop under the Logos plus the Regents and as, in addition to the three prime aspects derived from the Rings of the Cosmos, the Logos also reacts to the influence of the twelve Cosmic Rays, subsequent evolutions are characterised by the influence of the Rays which predominated at the time when they received the Logoidal impulse. As these Cosmic impulses are received by the Logos by means of the Zodiacal Initiations, the Group Spirits of the swarms thus developed are known as 'Star Logoi'. These are closely concerned with types in the evolving Sparks.

It will thus be seen that each swarm, after it has achieved at-one-ment with the Logos, performs the part of Compensator or Counterpoise in the work of evolution, for, with the coming in of epigenesis, comes also the risk of developments out of harmony with the Logoidal Nature.

Likewise these evolved swarms are employed to convey to the outgoing Sparks the fruits of evolution that have been achieved, and thus save a needless recapitulation of reactions already stereotyped in the universe.

We have now concluded a description in outline of the evolution of the Logos and His Regents who condition all future evolutions.

This concludes the second section of the teaching.

Section 3. Chapter XIX. Tabulated Summary of Influences.

Logoidal Influences.

(a) Cosmic influences acting on the Logos, the Rings, and the Rays as exemplified by the Zodiac, and other Great Entities.

(b) Modifications of Logoidal consciousness produced by reactions to the evolution of the manifested universe.

2. The Influences of the Manifested Universe.

(a) Plane conditions.

(b) Influences of Star Logoi.

(c) Influences of Planetary Spirits.

(d) Influences of other evolutions sharing the same planet.

3. Factors of the Manifested Universe.

These factors are stereotypes of reactions which always function on appropriate occasions. Being built up by preceding evolutions, they form the inheritance of each subsequent evolution, and are innate capacities. There are very many. We will enumerate certain of the major ones:-

(a) Law of action and reaction - equal and opposite.

(b) Law of Limitations.

(c) Law of the Seven Deaths.

(d) Law of Impaction or the transmission of action from one plane to another.

(e) Law of the aspects of force, or Polarity.

(f) Law of Attraction of outer space.

(g) Law of the Attraction of the Centre.

Under the influence of these factors evolution proceeds, and to terms of these factors it can be reduced. The Logoidal influence predominating at the time that a new phase is being developed determines the type of life or vehicle evolved.

Chapter XX. Cosmic Influences.

We are now considering the influences under which human evolution takes place.

You are accustomed to the concepts of Astrology which delineate the planetary influences affecting the personality.

The subject of our discussion is, the Cosmic influences affecting the individuality, which may be termed 'sidereal astrology' in distinction from planetary astrology.

You have no doubt realised from previous teaching that the universe evolves subject to the determining influence of the Logoidal consciousness, and that the Logoidal consciousness experiences in its turn the influence of the Cosmic tides.

Therefore the universe is modified indirectly by the action of the Cosmic tides. The Cosmic tides consist of influences of the positive and negative phases of the Rings. These phases affect the Cosmos as a whole, so that the twelve Cosmic Rays and the seven Cosmic planes function alternately with their positive and negative aspects predominating. Which means that when the positive phase predominates, the forces of action - the apex shall we say - may be conceived of as in the centre. When the negative predominates the apex is at the circumference.

Thus in a positive phase a circuit would consist of an inflowing and outgoing. In a negative phase, an outgoing and inflowing.

The action of a Ray therefore, differs greatly according to whether it be experienced under a positive or a negative phase of the Rings.

So that a Great Entity may be conceived of as circling round the Cosmos in its orbit, and receiving the influence of the Rays as it passes through their areas, but receiving them alternately under their positive and negative aspects. The evolution proceeding in the universe will be correspondingly modified according to whether that evolution takes place when the Logos is experiencing a positive or negative Cosmic influence.

The calculating of these influences constitutes sidereal astrology. This is the astrology which relates to the lives and fates of Group Souls and Planetary Spirits. It concerns the nativities of the Heavenly Bodies themselves. The basis of this calculation is the precession of the equinoxes.

The equinoxes and the Cosmic Ray phases correlate, and there are four phases to a Ring phase. On that basis you can calculate out the sidereal influences affecting evolution.

Remembering this, however, that these influences do not affect human lives directly, but affect the planetary Spirits which, in their turn, influence the mental and karmic atmosphere in which a soul reacts. And the Planetary Spirits themselves are modified by the tracks in space described about them by the evolution of a Group Soul of any Life Swarm that is progressing through their sphere. So that, although the Logoidal influences are remutable, modifications of these influences are introduced in the course of transmission. So that the astrology of the ancients, though fundamentally true, is not strictly accurate at the present day. The developments caused by evolution must be allowed for. Therefore, those aspects which, in primitive times might be interpreted as war and bloodshed, at the present time might be interpreted as a conflict of ideas. The Planetary aspects at the time of the Darwinian controversy would have meant war at an earlier stage.

Sidereal astrology should always be calculated in relation to the Race before any horoscope of an individual of that Race is cast. Group Mind and Group Souls are subject to sidereal astrology.

Individuals to planetary plus sidereal astrology.

Work out the equinoctial positions. From that you can calculate the Ring influence. This will enable you to know whether the Heavenly House is in its positive or negative aspect, and this will tell you what aspect of the Logos is in function. Whatever aspect be thus energised will stimulate the corresponding aspects in all manifestations.

Breaking down and building up aspects depend on the Cosmic Rings, and the particular form of destruction or construction depends on the Cosmic Ray. These prime conditions underlie all others and frequently falsify the best made calculations.

In addition to these, the regular and calculable influences of the Cosmos, there are the irregular influences caused by the passing of other Great Entities upon other spheres or planes of the Cosmos, as previously referred to. You will find the particulars on this subject in a previous chapter.

There is no method which you are capable of grasping whereby such influences can be reduced to a calculable system, but they will be found to correlate with the approach of the comets. Some, therefore, are known to you, for some of the comets have their orbits calculated. Some are still unknown to human thought, but give adequate notice of their approach by the disturbances induced in other heavenly bodies.

The astrology of the comets have been but little worked out and would repay attention. The best method of calculation is through the spectroscopic record of a comet. This will enable its chemical composition to be deduced, and the proportions of the elements will give the necessary clue to the nature, especially the proportion of the metals, which, being referred to their appropriate correspondences, will furnish the key to the problem of good and evil, the fruit of the Tree of Knowledge.

Thus it can be seen of what the force is the support or pillar, for that which it supports will have its activity intensified, so that, that which should be a negative phase may

unexpectedly become positive.

The basis of calculation of sidereal astrology, then, is the equinoxes, subject to irregular modifications of other Great Entities, many of which can be calculated by means of the comets.

The comets, it may be said, are aggregates of atoms drawn together by means of the electrical disturbance occasioned by the influences of Entities upon subtler planes. That is to say, Great Cosmic Beings that have no matter of the 7th Cosmic plane in their composition and therefore cannot form a universe which is perceptible to the senses of a 1st plane Solar evolution.

These comets do not generate a Group Soul which can evolve. They are sidereal idiots. Artificial elementals are their souls, and they are concerned - certain of them - with Cosmic scavenging. To them are sent those rare units of an evolution which, by the persistent misuse of epigenesis, have dedicated themselves to destruction. The comet, in its orbit, takes such souls to the outermost bounds of the Cosmos wherein there are no influences to which they can react, and the Cosmic atom-images, which go to the building of their component parts, cease to be reflected.

That is the unknown death. Such units cease to be - completely, and there is no reincarnation, or fresh start. Even their karma is disintegrated and touches not the Group Spirit. It is said of such that they exchange their planet for a comet. They elect to go far and fast, but they go too far and too fast for their forces of cohesion, and the comet to which they have yoked themselves, when it returns again to the sphere of our solar system, is found to be without them.

Solar evolutions proceeding from the Solar Logos - which is your God - synchronise roughly with the Ring influences of the Cosmos. That is to say that under the positive Cosmic influences the Logos will give the stimulus which sends a new swarm upon its journey, but the length and speed of that journey synchronise thenceforth with nothing else, because there are so many counter-acting influences, save that it will have to make its passage through the nadir at a time when the Cosmic tides are turning. But it may have one or more Cosmic phases upon its outgoing arc.

The change of a phase will always precipitate an evolutionary crisis, but until a Cosmic tide-turn occurs, when an evolution is approaching the limit of its developmental capacities, it will not venture over the dead centre, but will perform epigenesis and bide its time.

Those Beings which essayed the task of passing the nadir under unfavourable influences failed to make the transition, reverted along the original path when the Cosmic tide came later, and become demons and devils. Hence the distinction of the Left Hand Path.

The left hand path can be gained in two ways, by deliberate crossing of the arc from right to left after the nadir has been passed, or by retroversion before the nadir has been passed. This has reference to the squaring of the Lodge.

You will see by this that it is necessary to watch the Cosmic tides when undertaking any regenerative work in relation to the spiritual guidance of humanity.

The great constructive period of the 19th century afforded a valuable starting ground for any spiritual impulses.

The first quarter of the 20th century was a phase of destruction. You will observe that movements upon all different phases that took their rise during that period, especially during its middle years, have come to naught. The concepts may have been sound, but the season was unpropitious.

Chapter XXI.

The Logoidal Relation to the Manifested Universe.

It will be realised from the study of the foregoing papers that the Logos is related sub-consciously to the Cosmos and consciously to the universe. Remembering also that the Logos is affected by the positive and negative Cosmic phases, you will perceive that under the negative influence its consciousness will tend to subjectivity and therefore the Cosmic influences will predominate in the

Logoidal consciousness. At the same time that the Logoidal influences will be withdrawn to a great extent from the manifested universe which will be left to the control of forces which it had itself generated in the course of its evolution.

These periods are referred to as the days and nights of Brahma. Be it noted, however, that there are the greater and lesser nights.

The relation of the Logos to his universe will be best realised by remembering that a phase of evolution is to the Logos what an incarnation is to a man.

The forthsending and returning of an evolutionary Life Swarm conveys the same harvest of experience to the Logoidal consciousness as the individuality of a man receives from the incarnating personality. The Logos itself corresponds to the Divine Spark. The universe, in its group soul aspect, to the individuality.

The evolutionary swarm to the personality. Bearing these correspondences in mind, you will be able to interpret the Logos in the light of the man, and the man in the light of the Logos.

The formation, development, and devolution of a universe corresponds to the evolutionary cycle of the Logos, so that the Logos develops by means of a series of incarnating impulses which are evolutionary life waves or swarms.

Each succeeding evolution penetrates deeper into the 'form' aspect of the universe; renders it more complex in its organisation; brings it to a stage further in the development of that perfect balance of forces which it is enabled to reach as a whole. When the entire manifested universe acts as a whole it is fully self-conscious. And soon as self-consciousness is established, objective consciousness becomes possible. The universe then becomes aware of the Cosmos. Reciprocal consciousness between Logos and universe is established.

We have then, first, the self-conscious Logos.

Secondly, in order that the Logos may establish objective consciousness, the need of an object of which it can be conscious.

The Logos, therefore, projects its concept of itself and becomes conscious of that. The concept, in its turn, develops self-consciousness through successive phases of evolution. The Logos is aware of these changes as they take place, and is modified by the knowledge.

Finally the universe, having attained full self-consciousness, becomes objectively conscious and is aware of the Logos. But as the Logoidal consciousness has developed, step by step, with a universal consciousness, they are identical, the only distinction being that the Logos has a background of Cosmic conditions, and the universal consciousness has a background of mundane conditions.

The Logos, then, absorbs into itself the universal consciousness, because the Cosmic forces, by their attraction, overcome the cohesion of the mundane forces.

All these systems of organised reactions, which held together the atoms of the manifested universe, are therefore withdrawn from the plane of the manifested universe into the Cosmic state of existence, and the atoms, of which the manifested universe was composed, return to their primary condition of tangential movement, unco-ordinated by any superior force. This is the lesser chaos and is referred to expressively as "old night" or the "night of the ages".

It will be seen then, that the goal of evolution is the development of a consciousness which can unite with the Logoidal consciousness, and pass from the phase of a reflected, or projected existence - a phenomenal existence - to that of a real, actual or noumenal existence in the Cosmic state. This can only be achieved when the entire manifested universe is perfectly synthesised. This represents the pralaya or night of Brahma.

A lesser pralaya, occurs at the completion of each phase of evolution during the time in which the Logos meditates upon the concepts presented to it as the fruits of that evolution, thereby modifying its own consciousness.

The succeeding swarm of Divine Sparks receives the impression of the modified Logoidal consciousness, as previously explained, and therefore starts upon its evolution with an elaborate reactionary capacity already developed.

The matter of each plane, having been used to build forms of a certain type, retains the reaction capacity of that type after the forms have been disintegrated, and therefore assembles into smaller

forms with a greater readiness each time it is called upon to repeat the process until finally it holds these forms of its own organised forces.

Thus subsequent life-waves are compelled to use these forms and are conditioned thereby. This is retrogressive, because each life-wave, having performed epigenesis, is more highly elaborated than its predecessor, and therefore cannot enter the same mould without deformity. This matter will be referred to again when considering the problem of evil.

It must then be realised that each unit of a life swarm has, inherent in its nature, the reaction-capacities of a Cosmos in its simplicity, and of all preceding life swarms in their complexity. Therefore, though fundamentally it has a perfect simplicity of principle, it has an infinite complexity of reaction-capacity.

The Cosmic principles are known and are constant. To these each human soul is obedient as to the fundamental laws of its nature. But the reactions of epigenesis cannot be calculated in relation to individuals because of their complexity, and the number of possible modifying factors. They can only be calculated in relation to evolutions because the number gives the average. Hence it is that epigenesis introduces the element known as free-will; and free-will, in the interval between its development and its synthesis to the Logos, gives rise to the positive evil of the manifested universe.

The teaching of the last two lectures was devoted to a consideration of the extra-universal influences. We are now in a position to consider the intra-universal influences. Let it be borne in mind that the extra-universal influences firstly are of two types:-

(a) The Cosmic influences which act upon the Logos, and to which the Logos reacts, thus undergoing the changes.

(b) These changes, being reflected upon the manifested universe as variations and phases of the Logoidal influences.

The Logoidal influences are not constant, though true to type. This is an important point in which esoteric theology differs from exoteric theology which conceives of a God as changeless, whereas esoteric theology conceives of God as Himself evolving, and as subject to mutation, according to law.

Secondly, the Logoidal influences change owing to modifications in the Logoidal nature produced by his reactions to the evolution of the universe. Thus, we may say, that the Logoidal influences playing upon the manifested universe vary in these two ways, and these have to be reckoned with in all calculations of the influences to which evolving humanity is subject, and they can be calculated - in the Cosmic type - by means of the equinoxes and the comets: and the evolutionary reaction type by calculating the curve and studying the phases of the biological history. We will now proceed to deal with the conditions in the manifested universe subject to which man carries on his evolution.

It will have been perceived, from a study of the foregoing chapters, that all action and reaction which is regular, becomes cyclic, according to the law of universal curvature; and that cyclic reaction makes a 'track in space' and thus becomes stereotyped. So that the manifested universe is at any given time a set of molecules and atoms held together by a framework of tracks in space. In other words, the organised manifestation of the 'One Existence' are simply a set of stereotyped reactions of which the tracks in space form the abstract mould. (The idea of the abstract mould is an important one and should be borne in mind).

These sets of stereotyped reactions are of many different types, and they can be distinguished according to the mode of their origin. Some were left behind by the Lords of Flame in the course of their evolution; others by the Lords of Form and others by the Lords of Mind; and each of these sets of stereotyped reactions form the natural laws which govern the manifestations of those particular kinds of forms and activities which were built up in the course of that evolution, and these form the distinctions between one kind and another. But as each evolution makes use of the creations of its predecessor, the reaction types of that predecessor will be found inherent in the successors, though the analytical mind can dissect them not.

They also, however, exist as independent sub-strata, and it is the knowledge of the method of

manipulating these - the elemental essences of each kingdom - which is the basis of practical magic; and remember that each type of manifestation has its elemental essence.

You will recall that each phase of the manifested universe was built up in turn, and that these phases form the fields of development of subsequent life-waves. It therefore follows that each life-wave, at each phase of its evolution will be conditioned by the conditions of the plane upon which that is undergone. Therefore an understanding of the planes is essential to an understanding of the problems of evolution, and of Initiation, which is simply condensed evolution.

The laws of the first, or physical, plane are being worked out by means of the five physical senses which relate to that plane, and are well known to you under the generic name of Natural Science, though why man should consider one of the planes of his existence natural and the rest unnatural is a strange fruit of epigenesis.

These conditions, so far as the inanimate world is concerned, have been well and truly observed, and subject to these laws, life will proceed with its evolution upon the physical plane. But scientific thought has made a mistake in believing that these laws are all there are and this mistake has vitiated the last hundred years of science. The ancients were wiser but not so well informed.

Certain schools of religious philosophy, however, make the opposite mistake and believe that life can work out its evolution regardless of the laws of the physical plane. This also is a mistake.

The forces of a plane are supreme upon their own plane.

Controllers of the plane below and, when in contact with the plane above, are in their turn controlled.

For example, the laws of logic are supreme in the realm of mind. The images of mind control the forms of the emotions but the images of mind are themselves controlled by the spiritual forces.

Each plane is capable of independent function, or of function in circuit, but as soon as the planes are put in circuit it is necessary that the current should be completed by uniting the arc upon the 7th plane, otherwise the open arc will short to the Left-hand path.

For example, should the trained mind learn to control the body of emotions, and the body of emotions learn to control the physical vehicle, you have an arc in function of which one half is conscious or negative, and the other half sub-conscious or positive, and the sub-conscious always gives the stimulus.

If that arc be not completed into a circuit by junction through the Logoidal image on the 7th plane it will short from conscious to sub-conscious upon the 4th or 5th according to type; and the sub-conscious being the positive or stimulator will assume the control.

Now the sub-conscious was built up in the past, therefore the past will assume control. The past lies to the left. That man will then return to an earlier phase of evolution and will be actuated by its motives while retaining the faculties of a later form of evolution.

Though these motives are adequate to the control of the simple faculties of that phase they are inadequate to the control of the complex faculties of a later phase, and that man becomes a danger to evolution by destroying the poise of the group soul of which he is a member and, as it will be remembered, it is the function of the Entities evolved in earlier life-waves to adjust the balance of compensating forces of the universe, he will be dealt with by the Destroyers and will be reduced to his lowest common denominator. That is to say, his later faculties will be taken from him and he will be left only with those faculties suited to his impulses. Certain types of mischievous malicious idiots are produced in this way

Chapter XXII. Influences of the Manifested Universe.

Plane conditions, and Planetary Spirits.

The doctrine of the planes cannot be understood without the doctrine of the Planetary Spirits.

Let it be remembered that a Planetary Spirit was evolved with the development of each plane, but that as the Planetary Spirit itself was developed at the time that the plane was being evolved, its highest aspect will be of the subtlest aspect of the matter of that plane. Thus the subtlest aspect of the Earth is etheric. It is a plane of forms without intelligence.

Each Planetary Spirit then is the Archetype of the life of its plane, and it is the great dominating influence of that plane. In the course of the evolutionary tides, however, matter of the planes below is gathered about that Planetary Spirit thus forming shells or bodies for it. But the matter of the planes above is not accreted. For these elements in its nature it depends upon the influences from superior planes which act upon its atmosphere, and that element in its atmosphere is more directly supplied by the corresponding aspects in the lives inhabiting its sphere.

Thus the Planetary Spirit is as a group soul of that plane on which it functions through the planes below it to the dense physical with which it has been supplied, but the elements of the plane above it, which serve it as an individuality, are supplied by the lives evolving in its sphere, and partakes of the nature of a Group Mind of the life of that planet. This is a subtle but important distinction, for it means that the Higher Self of the Planetary Spirit depends upon the lives dwelling on it for its development.

A Planetary Spirit is a vast artificial elemental for which humanity builds a greater self, and while the Planetary Spirit determines the condition of all evolution and all function within its sphere, the higher aspects do not belong to it but are related to those Planetary Spirits who are its seniors. Therefore it is that, in relation to the Earth, the man who would attain the maximum evolution within her sphere - who would achieve the supreme humanity of the animal aspect - must make himself at-one with the forces of the Earth and of her subtle self - the Moon. But it only by the influences of the planets that he can raise consciousness to the higher planes, and upon the tides of the planets he must make the transition.

He who takes the Earth as his planet becomes Earthbound and the time is soon now, as Cosmic time is reckoned, that the present human evolution will be withdrawn from the Earth plane, and therefore the advanced souls of that evolution do not find their development in communion with the Earth Soul. It is to the children of the elements that Earth is an Initiator, not to the children of men.

The Earth and the Moon Initiations are physical Initiations and concern the fall into matter and generation.

The planets may be assigned as follows:-

The Earth to the plane of the dense physical.

The Moon her satellite, to that division of it known as the etheric.

Mars dominates the plane of the instincts and passions.

Venus is the plane of the abstract emotions.

Saturn is the plane of the concrete mind. Saturn, be it noted, is the formative influence.

Mercury is the planet of the abstract mind.

Jupiter the planet of the concrete spiritual.

The Sun himself is the symbol of the Logos on the 7th plane.

Conceive then each planet as the archetype of its plane.

As radiating out its influence upon that plane and tuning that plane with its vibrations. And conceive each evolution as developing the corresponding factors within its nature when sojourning on a plane of the outgoing arc, and upon the returning arc aspiring to dominate those factors within itself and thereby to dominate the condition of the plane by means of the rapport thus developed with its ruling influence. The domination can only be completely achieved by securing the sympathetic co-operation of the Planetary Spirit.

Now as has been aforesaid, the Planetary Spirits are great but mindless Entities, therefore each has assigned to it a Guide, and these Guides are of the first evolution - being Lords of Flame - and they are called the Archangels of the spheres.

It is through the knowledge of these the dominion of the planes is secured. For that reason their Names are guarded, and known in their entirety to the Logos alone. For by the Name in its entirety it is possible to command, but in the Name in its consonants only it is possible to invoke.

These Archangels of the spheres have their own Initiates who know the consonants of the Names, and these are concerned with the evolution and regeneration of the planets to which they are assigned, as the Masters, whom you know, are concerned with the Earth plane.

Influence of the Star Logoi.

The Star Logoi have nothing to do with the Planetary Spirits, with whom they are sometimes confused, but with the signs of the Zodiac, for they represent the influences of the Cosmos upon the solar system.

They, likewise are built up as artificial elementals to whom are assigned Archangelic Guides. But the Rays, being older than the planes are more highly evolved, and instead of being overshadowed as in the case of Planetary Spirits, identification is complete. The Star Logoi are Lords of Mind. The elemental aspect of each Star Logos is built up by the evolution which takes place under its influence and a Star Logos might be termed the Group Mind of the evolution.

Each evolution builds a Star Logos and thereby, as it were, focuses, stereotypes and tames that particular aspect of the Cosmic influences through which it evolves.

These Logoi remain in function after the Cosmic Tide, which called them into being, has passed away, and thereby the Cosmic influences of that type are maintained in function in the universe, which evolution is developing into the form of a miniature Cosmos.

Influences of other forms of Life.

Finally there remains to be considered the influences of other forms of life - evolutions of a later and earlier day in process of development.

In the normal way these do not influence each other at all, but being of different states of consciousness, though perchance occupying the same globe, have no point of contact.

But under certain conditions contacts may be established, and these contacts are popularly known as psychism.

Psychism is of two types (a) the perception of that which is below in point of evolution, and (b) the perception of that which is above; and the Earth, being at the nadir, these two ways of seeing may be conceived of as looking back along the left-hand path, or forward along the right-hand path.

It is permissible to look forward as far as the eye can range because that will lead the soul forward, but to look backward leads the soul backward, for where the eye looks the feet will turn.

We may never look backward up the planes - we can only look across the planes from the involutory to the evolutionary arc. Thus it is that those Entities which dwell upon, or can raise their consciousness to, shall we say, the 3rd plane, may minister unto those in their sphere who are upon that plane on the outgoing arc, but those upon the physical plane may not look at the involutory aspect of a subtler plane until they have mastered its evolutionary aspect.

The Initiators of the physical plane are those who have attained perfection on the 7th plane.

Initiators always function across the diameter (upon a diagram you will see the significance of this) and the 7th initiates the 1st. Therefore man upon Earth is bidden to worship - not the Nature forces of the 2nd plane, nor the saints of the 3rd, nor the Masters of the

4th, nor the Angels of the 5th, nor the Archangels of the 6th, nor the Christs of the 7th, but the Logos Himself, whose Divine Spark it is by which they live.

But all through the intermediation of these Hierarchies they rise to the consciousness of the Cosmos, but they never pause or achieve finality upon any plane of the manifested universe, for there is no finality in manifestation.

The 1st plane is the only plane upon which the Initiation of the Logos is given, but it is this Initiation of the Logos which marks the transmission from the involutory to the evolutionary arc, for it wakens the Divine Spark which has well and truly been called the 'God within' and which evolves into union with the 'God without'.

On the evolutionary arc, as he goes up the planes, man no longer looks straight to the Logos but to his immediate Hierarchical superiors; but on the involutory arc he neither looks back to the Logos, nor on towards matter, but across the diameter of the plane to his gods, who are the evolved Entities who are withdrawing from materialisation, and in their withdrawal have reached the plane to which he has advanced.

Therefore it is that the primitive religions are along polytheistic lines. Monotheism marks the nadir of materiality and the transition from the involutory to the evolutionary arc. The Jews, who first achieved this, are the most materialistic of all peoples.

On the evolutionary arc the religions are not polytheistic for, having passed through the nadir, entities of this evolution have known the One God. They are, instead, obedient to the Hierarchies; for that Light which, when dimmed by the veil of matter, is bearable, would be unbearable, when matter no longer shelters.

Therefore upon the subtler planes when consciousness is freed from the brain we never approach the Creator direct but always through those Intermediaries who transmit and translate the force from plane to plane, of whom the Group Mind, or Star Logos of our evolution is the ultimate.

This teaching, you will perceive embraces the symbolism of the Caduceus. You see the direct path from the base to the Crown; and you see that the paths wind from side to side of each plane as the downflowing tide of life is made conscious of the higher aspect dwelling upon its plane, and the upgoing tide has to made aware of, and minister to the downflowing. The Cosmic Christ, or Star Logos, presiding over each evolution is a Lord of Mind, but as he is of the 3rd evolution he will have the aspects of the earlier evolution in his nature.

Therefore while 3 is the prime symbol of this evolution, because its Christ is three-aspected, 4 is the ultimate symbol. The Trinitarian aspect is the basis, but the Tetragrammatic is the completion.

This is the clue to much.

Remember never seek to explain anything in manifestation or out of it in terms of the static, for all is kinetic.

Chapter XXIII.

Teaching concerning other evolutions inhabiting a Planet simultaneously.

In considering the subject of simultaneous inhabitation of a planet by different evolutions it is necessary to realise that these fall into different classes:-

(a) Those of the outgoing or involutory arc.

(b) Those of the more highly evolved evolutionary arc.

There may also be a third type of classification in which the types of life differ in kind instead of in degrees of development.

We will proceed to enumerate and describe the different types of life which may be distinguished upon a given planet.

First there will be the completed Entities of earlier evolutions. These are of the three types already known to you - the Lords of Flame, of Form, and of Mind. These function in their spheres as Regents.

Planes Lords of Behind the Laws of Their work 7, 6 Flame Physics Regents of the Elements and Givers of Life

- Elementals are their servants.

5, 4 Mind Biology Regents of the Science of Life.

3, 2 Form Chemistry Enable Force to function by confining it.

The Givers of Death.

1 Humanity Sociology Developing human evolution.

Interaction.

The Lords of Flame are the lives behind all natural forces and the controllers thereof. The elements of inanimate nature are their children; created by the conceptual action of their intellects in the same way that the Logoidal Mind projects the manifested universe.

A Lord of Flame conceives a function, and having himself evolved beyond the point at which he can develop further by this functioning, withdraws to a higher plane, and projects the concepts of

that functioning to maintain the function.

These thought-forms, by experience, develop a personality, but have not yet arrived at an Individuality, therefore they are spoken of as soulless.

You will observe that the Divine Sparks develop, first a nascent Individuality and then a personality, but the creations of the created develop, first a personality and then aspire to Individuality. Therefore they are spoken of as evil spirits -

familiars, demons and genii. They are not deliberately malevolent, but are incapable of response to aught but the lower aspects, when approached upon their own plane. Their sole link with the Divine is through the consciousness of their creator.

Therefore it is that those who would deal with them need to come with the authority of their respective originators of the different types of Elemental Beings, then they become the Messengers of God, for they are approached from their Divine aspect, and the reflected Divinity within them responds; otherwise they are approached from the demoniacal aspect and in their lower aspect they respond.

These, the servants of the Gods, maintain the co-ordinated rhythms of inanimate nature. They are the controlling forces of heat and light, of gravity and all dynamic reaction.

The Lords of this evolution rule upon the 7th and 6th planes as Regents of the Elements, or Lords of the Elements, as they are sometimes called, and, according to the operations of their nature, are the kinetic conditions of the manifested universe; and subject to this, man must perform the actions of his evolution.

To these Lords man must give unquestioning obedience, reverence to their greatness, and the gratitude which is due to those who, by taking thought, sustain the conditions of his being.

To their servants or thought-forms, the Elementals, he owes the gratitude due to those who, by their nature, serve, but who serve unintelligently. Should he seek to approach them he does so through the corresponding aspects of his own etheric double, but does so at his peril, for though they will first vivify those aspects, they will subsequently absorb them.

Now be it known that these Elementals are evolving upwards grade by grade through the personality towards Individuality, and in the event of his making contact with them, some among them might fall to the temptation of Black Magic whereby evolution is illegitimately hastened, and seek to appropriate an already developed Individuality and thereby establish their contact with the Divine.

In such an occurrence the opposite to the ordinary form of obsession occurs - the personality is thrust out and an Elemental consciousness takes its place; and of such an one it may be said they have the stone of the Earth, or a wave of the sea, or the wind of heaven, or a flame of fire for a heart, for human heart they have not; and because of the strength of the Elements they call into the elemental in mankind with a profound calling, and such have always troubled the sons and daughters of men. For they come as beings of a strange and elemental power that know not the bonds that bind humanity, and they may be known by these things - they ever seek their own kingdom and sorrow for it; for humanity for them is a crucifixion; and they ever call to the same aspects of men and women, and those who answer they destroy, for they are too strong for them. It may also happen that one who has made contact with the Elementals, instead of being obsessed, may be mated. Then will the elemental aspect of their nature be linked to an Elemental and yearn towards that unseen lover who is not of human kind. Then there is sorrow for that one, for they thirst with a thirst which cannot be slaked within the flesh. To meet their lover they must issue forth in the etheric form. Much might be said of this, but not now.

Should a human being, however, seek contact with the Lords of the Elementals he purifies those aspects of his nature which correspond to their kingdom until they become the refined essence of their qualities. In the stability of the Earth he is stable. In the mobility of the water he is mobile. In the speed of the wind he is swift and aspiring. In the brightness of the flame he is zealous. Then, being Lord of these things within himself, he is a Lord of the Elements in the microcosm, and may thereby claim kinship with the Lords of the Elements of the macrocosm, and the Messengers of the Elements are his servants. There is no other way than this. Those who use the Names without the

power invoke to their own destruction.

The Lords of Form are they who govern all physical and chemical affinities, and to them applies all that has been said of the previous evolution. By their aid we may penetrate into the knowledge of the relationship of things - for 'form' is but a co-ordinated relationship.

The interaction between the Lords of Flame and the Lords of Form is very important, for the Lords of Flame are the Givers of Life and the Lords of Form are the merciful Givers of Death.

It is from the Lords of Form that we learn the Laws of Death - the laws of escape and freedom.

To master the forces of the Lords of Flame we invoke the powers of the Lords of Form.

To master the powers of the Lords of Form we invoke the powers of the Lords of Mind.

The Lords of Form are the Laws of Friction. They enable force to function by confining it, but by friction they disperse it. Therefore are the Lords of Form the Lords of Death, for they bring all things living to an end, and all things kinetic to a standstill; but they make actual that which is potential.

They are the Educators.

Discipline is theirs, though punishment rests with the Lords of Mind.

The Elementals of the Lords of Form determine the nature of all chemical elements, combinations and reactions.

The Lords of Flame are the laws of physics.

The Lords of Form are the laws of chemistry.

The Lords of Mind are the laws of biology.

The Lords of Humanity will be the laws of Sociology.

In considering the question of other evolutions

occupying the same planet it must not be forgotten that if consciousness be raised above the physical plane to function in another state it is thereby lifted from the sphere of the Earth and comes under the Regency of the Planetary Spirit corresponding to the plane on which it functions. (This is a matter to be remembered in casting the horoscope of psychics.) In this teaching, however, we will only deal with those influences operating on the Earth sphere. These include those influences operating on the etheric sub-planes while approaching the Earth on the involutory arc, and those which also influence the Earth on the evolutionary arc.

In the ordinary way, for the creatures of an evolution to look back to the conditions of a phase which they have outgrown is retrogression, and to be deprecated. Those who have immediately passed beyond the Earth's sphere are not permitted to look back lest they become earthbound. Hence the evil of interference with the spirits of the recently departed, save for the purpose of giving quittance.

There exists, however, a peculiar modification of evolution whose effects are known to you under the general term of the work of the Great White Lodge.

In the ordinary course of evolution the wood grows with the growth of the trees. That is to say, that the perfecting of the individual souls perfects the group life. But with the coming in of selfconsciousness comes a modification of group life, and certain souls choose the path of the Redeemer rather than the path of redemption. They elect to forego the fruits of their efforts and their good karma is added to the racial karma for its modification.

Chapter XXIV. Influences which Humanity exerts upon Itself.

It is not proposed in this teaching to recapitulate known facts in evolution, but rather to supplement that knowledge by the revelation of unknown factors, and the explanation of the implications of little known or misunderstood factors.

In previous lectures we have dealt with pre-human evolutions and their influence upon humanity. In

the present lecture we will deal with certain little known influences which humanity exerts upon itself.

Do not let it be forgotten that all evolution has a sequence in time - or technically, a sequence in cause and effect; and though the path of evolution be so broad that many are contemporaries, yet the evolutionary types have a well marked sequence. The average of the present humanity may be looked upon as being two-thirds of the way round the cycle; and it should also be remembered, with regard to the individual, that just as all the latencies of the past are innate in him, so are all the potentialities of the future, and that some of these potentialities are on the threshold of actuality. The full range of the possibilities of human evolution thus falls into three sections: the latencies, the actualities, the potentialities.

The doctrine of the Group Soul is closely interwoven with that of the Planetary Spirit for, as has been shown, the Planetary Spirit is the Personality of the planet built up out of its experiences derived from the consciousnesses functioning within its sphere.

No consideration of group or individual psychology can be adequate unless allowance be made for the influence of the Planetary Spirit. This is sometimes referred to as the Earth pull, and as it was built up in the past and contains nothing of the future, it is necessarily purely atavistic and therefore, relatively speaking evil.

In contra-distinction to the Planetary Spirit it must not be forgotten that there is the Planetary Entity. This is the Logoidal realisation of the existence of a planetary sphere, and the Logoidal concept of its mission and evolution. This corresponds to the individuality, and development of both aspects takes place till they meet.

With regard to a Planetary Spirit, however, it is built up out of the realisations of the conscious life of its sphere, and as it is not possible to realise a thing until after its occurrence, the Planetary Spirit is always a stage behind humanity in its evolution. It will be seen that each phase of experience of a developing humanity lays down a corresponding level of Planetary consciousness. This is a reflection, or projection, of evolutionary consciousness, and like all reflections, is reversed, so the lowest aspect appears on the surface and the highest is concealed in the depths. This is borne out by experience, for when we touch the Earth Soul we touch its most primitive aspects first, and it is not until we have penetrated deeply into its sphere that we realise what it is capable of.

It is very necessary, in approaching these matters, that we should not investigate them until full self-consciousness has been attained. If we approach them by means of sub-consciousness we make ourselves one with them and the lesser is under the dominion of the greater - the individual of the mass.

The Planetary Spirit may be conceived of as the mass karma of the Earth, and all life on the Earth must be lived in relation to that karma, for it makes the mental atmosphere in which we live and move and have our being.

In considering the horoscope insufficient attention is usually given to the phases of the physical plane - to the changing tides of the Earth and of the Moon. It is not enough to note the Moon's position. It should be observed whether she is in her negative or positive phase. Likewise with the Earth, the season of the Elements should be observed. All these play an important part in human affairs, for, though they are not determining, they are conditioning.

The past or biological consciousness then, lives in the Earth karma and also lives in each individual identity, and the reaction between the individual and collective atavistic strata are very important. Wherever the development of a particular aspect has had its seat or form, that aspect will dominate the atmosphere of the locality. Where the Druidical cults built up their powers these powers will remain in evidence and will stimulate that aspect of an individual which they were designed to bring into function, and while this method of bathing in the mental atmosphere is valuable for adjusting the balance of the individual who is lacking in this respect, it is injudicious for those who already have an overplus of it, and as these feel themselves to be alien in the modern civilisation they are irresistibly attracted towards the ancient cultures and an oversetting of balance may be the consequence.

Each race maintains its cultural traditions, and each cult survives until the faculties which it was

designed to initiate have become the normal inheritance of the species.

Then it ceases to become esoteric and becomes exoteric.

Cults do not die because they are cut off from the march of progress, but because their spiritual principle is absorbed completely in the life of the race. That which they set out to teach is taken for granted and their day and teaching is over, because the pupil knows the lesson. That which is sloughed off is but the effete accretions of human opinion seeking to explain that which transcends it. But as long as there are souls that require the discipline, the cult lives on.

The cults of the past gain their power by contacting the strata of the Earth Soul to which their Initiation belongs.

Now be it known that these strata have close connection with the elementals, being used by them for the building of the thought-forms which enable them to assume a species of incarnation.

Therefore the contacts of an atavistic cult may be far reaching.

These things have their place in the armoury of spiritual weapons, but are to be approached with caution for they are two edged. A knowledge of them is necessary in the study of psychical pathology, but not for self-development.

These faculties are normal in us, and receive an undue stimulus if unduly fostered.

To each man his own Master. Do not select a Master of a lower or a different type of evolution to your own.

Chapter XXV. The Law of Action and Reaction.

Action and reaction are equal and opposite. The equivalence of the re-action renders it calculable if the ratio of transmission be known. Cosmic Planes.

2 Potencies 1 Chemical

There are seven sub-planes in a plane, seven planes in a universe of the 7th Cosmic plane, and seven planes in the Cosmos. Transmission takes place by Sub-planes.

The potency of each sub-plane is the square of the potency of the sub-plane below it. This, you will see, is explained by the fact that two opposing and equally balanced forces set up a vortex which is the primal atom. When these two forces meet they neutralise each other and the result is a centre of stability which is devoid of force save in its subjective aspect. It may be noted that a static force is the subjective aspect of a force.

If, therefore, you should be able to separate the gyrating currents which form a primal atom you will have two sets of potencies each of which would be the equivalent of the latency of that atom. So that instead of one actual latency you have two potencies. So that the atom has been multiplied by itself and transferred from one plane of manifestation to another.

Whenever a thing is thus multiplied it is translated from one plane to another and into another dimension. When, therefore, action and reaction are said to be equal and opposite it must be remembered that they are so in the ordinary sense in which this term is employed on the plane under consideration only.

If, however, such conditions should occur that the force should be transmitted from a lower to a higher plane then the reaction is in the equivalent potency of that plane, which is the square of the squared sub-plane of the plane from which the atom came. Hence it is that when you sublimate a force you multiply it by itself. When you de-grade a force, you divide it by itself. The term de-gradation is here employed in its technical sense as the opposite of sublimation, meaning descent into matter.

On the involutory arc de-gradation was the means of development. Hence it is that in the course of Initiatory experiences in which the soul recapitulated evolution, it has to know the depths.

Each atom of matter contains the fruits of an evolution.

Involution is a decimal process. Therefore you will see that if you could disintegrate the atoms of matter in an ounce of clay you could shatter the globe on which you stand, but before you could perform that magical process you would have, by the power of your will, to dissolve the cohesion of the Cosmos. Therefore it is not to be anticipated that this experiment will be successfully executed in the immediate future.

Each Divine Spark by the time it has reached the nadir of involution and is ready to embark upon the path of evolution whereon it is seen to be characteristically human, possesses potentialities which you little realise.

When subjective consciousness is raised from the plane of its habitual functioning to the next superior plane it conforms to the law already enumerated and an inertia is converted into two kineticisms. It is seldom that the consciousness centres of the lower plane are able to carry this force if the conversion is sudden and total. Hence the saying "Thou canst not look upon My face and live". Hence also the fact that where a lesser and more partial form of conversion takes place it is apprehended simply as a blinding flash of light. When such conversion takes place in its normal form it is performed by the method of addition instead of multiplication.

That is to say, when the transmutation is performed from one plane to another by the process of squaring, the result may be described in the words of scripture "He walked with God and was not". When the process takes the form of a many times repeated multiplication, you have the ordinary course of the Path, each grade of Initiation being a multiplication. When you have the process as an addition you have the normal course of evolution.

Each grade of Initiation is perceived by the super-consciousness as a blinding flash of light, and by means of this flash the image of the sub-plane to which it belongs is photographed on the sub-consciousness whence consciousness reads it at its leisure.

So that if power be raised a plane polarity is insufficient and you must have a group.

The form for a force raised from one plane to another is built up of the group mind. If a force is

raised a second plane, you must have a second grade in your group, you therefore get a grade for each planer.

If, on the other hand, force be degraded a plane, or a sub-plane, an entirely different process occurs, the force being rendered inert, the vehicle through which it functions is an empty channel, standing open, anything may fill it. This is the key to much, it explains obsession.

Now remember that the term obsession is popularly used inaccurately when what is technically called "overshadowing" is meant. Overshadowing is a controlling influence exercised by one entity over another. Obsession only takes place when the soul has been precipitated by the process of the degradation of consciousness. The term precipitation is used because the analogy is exact.

When therefore a true case of obsession has to be dealt with, it is not only necessary to cast out the invading entity but to sublimate the soul. You will see a reference to this in the story of the man from whom the devils were cast out and into whom the seven devils entered finding the house empty.

The degradation of the soul takes place through the operation of lower types of evolution with which contacts have been formed, it does not take place as a result of a deliberate act of will, but rather as a result of an inhibition of will.

Therefore when you are dealing with a case in which the will functions from the inhibiting aspect rather than the kinetic aspect, you must always take care lest such a pull downwards is set up. Inhibited will is a more dangerous thing than the perverted will, because it exposes its possessor to the influence of extra-human forces.

You will see then that the occult significance of the maxim that the law of Action and Reaction being equal has two implications - action and reaction are only equal on one plane - but when the functioning of seven planes is available they are anything but equal. Action and reaction are equal and opposite on the plane on which they occur, but when an action, occurring on a plane, has its reaction on another plane the result is a transmutation of values.

These values have already been explained to you. It will no doubt have occurred to you that when a force, being transmuted from one plane to another, exerts its influence on a second plane and withdraws its influence from the first, an alteration of equilibrium will result. This is indeed the case, and it is therefore necessary for the Adept who performs this operation to maintain the adequate equilibrium of stresses. For this purpose he must know the method of properly de-grading an equivalent force. This is an exceedingly important point in practical occultism, and concerns the utilisation of reverse aspects in their compensating potencies.

The Sephiroth, being reversed, are the Qliphoth. Therein is the key to much, and therefore it is that in every magical operation in which great spiritual potencies are invoked, lesser entities are also employed in their proper aspects and when what you would term a Master wishes to operate on the physical plane, he will of necessity employ an entity of a lower grade of evolution than his own, and he will be compelled to work through the personality of that person in order to restore the equilibrium which he is about to displace.

He will then, metaphorically speaking, employ that entity as the nadir of his arc.

The force he transmutes will be received by the highest aspect of that entity and will be expressed by the lowest and most concrete aspect of the Individuality of that entity, and the personality will be used for the return flow from the physical plane.

This would be expressed in diagrammatic form by the letter Y of which the two arms should represent the individuality and the personality, and the basal point the channel of outflowing and inflowing on the physical plane. Upon the Y superimpose an X and you will get the symbol of the outflowing and inflowing forces, the X being formed of two "C's" back to back, the left hand being marked with an arrow of outflowing, and the right hand with an arrow of inflowing. You will now perceive why chastity is demanded when operations of practical magic are in progress, because the return flow, having to take place through the personality in its lowest and most primitive aspect that aspect has to be upturned so that the force of its expression may return to God who gave it.

This is but another way of expressing the use of sublimation for the purpose of generating force in the upper planes. The pupil who receives force from his Master on a higher plane for purposes of

transmission to the physical plane must be prepared to effect the transmutation of the corresponding amount of force in his own nature from a lower plane to a higher in order to preserve the necessary balance.

It is the neglect of this operation which causes the all too frequent overweighting of the lower aspects of the Occultist.

Chapter XXVI. The Law of Limitation.

Limitation is the first law of manifestation, therefore it is the first law of power. This is not sufficiently appreciated. Many people believe that a spiritual power is infinite, which is far from being the case. For the Logos to manifest It has to circumscribe itself. But a spiritual power is so much greater than the potencies of the lower planes that, when brought to bear upon them, it overcomes all resistances.

But in order to bring any energy into manifestation it is necessary to provide it with a form or vehicle. The form is built in the substance of the plane immediately superior to that upon which it is desired to produce an effect, and through this channel is directed the force it is desired to invoke. To invoke a force without directing it is to disperse it. It is only by a knowledge and utilisation of the Law of Limitation that power can be conserved. In order to achieve an end you must outline that end and limit yourself to it, rejecting all that is irrelevant; and note this point, the first process in the invocation of power is the rejection of that which is irrelevant. This is another name for concentration. The Law of Limitation means the concentration of power by the rejection of the irrelevant. This is not sufficiently understood. In all

undertakings the prime requisite for success is to know what you cannot do. This is discrimination.

The Law of Limitation is the necessary corollary of the laws governing the invocation of power.

When it is desired to put through an enterprise, first proceed to think the matter out in all its details, clearly outlining the end it is designed to achieve. Next consider the means whereby that end may be achieved. Next proceed to eliminate all desire for anything unconnected with that aim. This is a most important point. In other words you render yourself one-pointed.

It may well be that in so doing you put aside certain legitimate human aims. Put them aside with the proviso that in due season their claims shall be considered, and then proceed with utter ruthlessness to limit yourself to the matter in hand so that you have but one desire and all else is subordinate to it; and think of nothing else; read of nothing else; dream of nothing else until the matter is finished.

Then having

achieved this complete circumscription of desire and limitation of the content of consciousness, invoke the power for its performance and in a flash the thing will be done. Thorough preparation means quick completion. In these matters insufficient time is usually given to the preparation, and therefore the achievement is incomplete.

If it is your intention to invoke spiritual potencies you must prepare for them by the complete dedication of the content of consciousness. It must not be forgotten, however, that such a narrowing of consciousness would destroy the balance of the nature if persisted in unduly. Therefore learn to alternate periods of

concentration with periods of expansion in fullness of life, so that the broadened consciousness and developed character act as a background for the intensification and limitation of desire which brings spiritual potencies into manifestation on the physical plane. It is the lack of this proportion which leads

to fanaticism and lack of balance.

It is by the limitation of the content of consciousness that you achieve the concentration of power.

But it is by the development and expansion of consciousness that you achieve the basis of

limitation, because limitation implies discrimination, and a limitation of consciousness is entirely different to a limited consciousness. Limited consciousness implies the exclusion of experience. Limitation of consciousness implies selection of experience and the focussing of attention upon the chosen subject. It is the Law of Limitation which is implied in the power to focus. It is by availing ourselves of resistances that we are able to obtain a purchase upon diffused manifestation.

The greater part of the resistance experienced by the neophyte in his attempt to practice the occult arts is the resistance of inertia. In order to set in motion that which is inert it is necessary for the Ego to obtain a purchase upon a similar resistance. Inertia is then balanced against inertia, and the kineticism of the Ego avails to turn the balance. In this way results may be achieved that the unaided will, could not obtain.

It is necessary that in the service of the Masters you should acquire a knowledge of the magical arts, because these enable you to invoke and concentrate power effectively. It is the use of these arts for evil ends which is forbidden, but the use of them under the law is an economy of energy.

Remember then that in all undertakings limitation is the secret of power. This does not imply, however, that you should always seek to achieve small things. Always correlate your effort with the Cosmos itself, and see your work in relation to the whole, but rigidly circumscribe the section of that Cosmic whole which you take into your hands. To weigh yourself in the scale against that which is greater than yourself is to be outweighed by the inertia of the mass, but to circumscribe a section of the mass and separate it from the whole, is to enable yourself to achieve piecemeal that which you cannot achieve in bulk.

In making this circumscription look for the natural lines of cleavage, seek the joints of the problem. In all

affairs there will always be points where matters can be segregated, and other points that will resist partition. Look for these on the Astral plane among the emotions involved in the matter. The scheme as a whole may be envisaged as One on the Mental plane, but upon the Astral plane the lines of cleavage

may be seen. The object of immediate desire may be distinguished from the object of remote desire. The object which is desired by one aspect of a complex nature may be distinguished from the object which is desired by another aspect. If you yourself circumscribe consciousness to a single point it will be brought to such a fine edge that it can be inserted along the lines of cleavage of an uncircumscribed enterprise and deal with that enterprise piecemeal.

It is the focus of consciousness which enables power to be brought to bear, and work to be accomplished with that power, but it is the extension of consciousness that provides the necessary base upon which that force obtains a purchase. The concentration at the apex must be supplemented by breadth at the base. This is a point which is often forgotten.

The Law of Limitation is the basis of practical application. It is the secret of power, therefore it is withheld from those on the probationary Path. They are taught of the existence of an infinite reservoir of power, and to meditate thereon. They are taught to meditate upon the formless power. This enables the power to use them, not they the power.

But when the knowledge is acquired of the method of channel-building through the lower planes, it is possible to direct power to any given end. When this is accomplished power is translated from the planes of the individuality to the planes of the personality; not within the organism, but without. It is therefore necessary to have the knowledge of the method of making forms "As above, so below". When the Unmanifest willed to become manifest, motion flowed in a circle returning whence it originated. To make a form upon the concrete mental plane thought must move in a circle, returning whence it originated. Starting with a concept it must proceed logically from that concept, reasoning from the general to the particular upon the outgoing arc, and from the particular to the general on the arc of returning, thus envisaging both sides of the question and correlating them.

This is the first stage.

The concept thus formed should then be transferred to the realm of feeling. This corresponds to the second Ring to be formed.

The concept should then be subjected to the driving force of the nature. This corresponds to the Third ring.

Now the Ring Cosmos is the concept on the mental plane, the Ring Chaos is the driving force of the instincts, and the Ring-Pass-Not corresponds to the Upper Astral aspect. By meditating on these correspondences you will learn much. This is your archetypal form and within it will be built up all the

actions and reactions arising in relation to the matter in hand, but this matter must always first be circumscribed by the clear definition of consciousness. The secondary action of consciousness arises with regard to the desires relating thereto, and the third aspect concerns the use of the primitive forces for the generation of power. The use of the primitive force for the generation of power will be dealt with in a future lecture.

The Cosmic aspect of the concept having thus been set up, manifestation in the world of form takes place within the circumscribed sphere. Without this circumscription there is no manifestation.

The prime law of the involutory arc is the Law of Limitation.

The prime law of the evolutionary arc is the Law of the Seven Deaths.

The Law of Limitation has for its basis the Law of Action and Reaction.

The Law of Action and Reaction has for its basis the phenomena connected with the curve. The curve sufficiently prolonged becomes a circle. A segment of a curve is an arc.

The pendulum swings in an arc. The pendulum is the type of action and reaction, equal and opposite. Prolong the arc described by the pendulum and you will form a circle, of which the length of the pendulum is the radius. This explains much in relation to the transmutation of forces from plane to plane.

Incarnation is based upon the Law of Limitation. Karma or destiny, on the Law of Action and Reaction, and because it is only in a limited sphere that equal and opposite action and reaction, can take place, force has to be manifested in form, so that the fruits of its action may be returned again to the

sphere whence it originated.

The building of a vehicle for incarnation follows the lines already laid down. Again we have the circumscribing which delimits the destiny to be worked out in that incarnation. Each soul determines with what pabulum the personality shall supply it. The Oversoul is the Lord of Destiny to each one. It is

this you invoke in all matters connected with your fate. You invoke your own Higher Self.

The Law of Limitation is analogous to the mathematical concept concerning measurements of surfaces. It has a two-dimensional aspect. It is by the introduction of a third dimension that we transcend the Law of Limitation, and man having a consciousness of three dimensions, can use the Law of Limitation by transcending it. Upon whatever plane the Law of Limitation acts it can always be transcended by the addition of a dimension to consciousness. This is the secret of the control of the Law of Limitation. The Law of Limitation is the means of calculating the conditions under which an operation has to be carried out. If you do but determine these conditions you are controlled by these conditions, but if you can raise consciousness to the plane which can perceive them as a synthesis, can perceive the abstraction which comprises them and can then delimit that abstraction and consider it in relationship to the condition of

its plane apart from the Law of Limitation, can conceive it in relation to the Cosmos, it is then possible, having in conception linked that idea to the Cosmos by envisaging the relation between the whole and the part, it is then possible for consciousness, bearing this Cosmic idea in mind, to be redirected to the finite aspect of that idea and then to approach it on another and superior dimension, and while utilising the Law of Limitation to circumscribe the matter in hand, to transcend the limitations itself. This method can be applied, not only to the handling of any matter or affair, but also to the building of the bodies in an incarnation, and to the handling of karma during incarnation, for do we but once see our predestined fate in its relationship to Cosmic law we have mastered our fate. The Higher Self always sees it thus, because the Higher Self has a Cosmic relationship by means of the Logoidal imprints on the Divine Spark; the lower self, having a terrestrial relationship

sees all things in relation to birth and death, beginning and ending.

So long as consciousness dwells in the senses it will view things from the standpoint of the senses, of pain and pleasure, beginning and ending. But when raised to the elevation of Cosmic things, it will see all things in relation to evolution, to the curve that comes round the whole circle, not to the straight line of the partition in finiteness.

The personality is what it is by virtue of the Law of Limitation. The individuality is what it is by virtue of the Law of the Nature of the Cosmos; and the ladder from the personality to the individuality has seven rungs, and these rungs are the Seven Deaths, for it is the Law of Limitation that brings to birth, but it is the Law of Death that brings to life.

For birth is death, and death is birth. All things are born blind, which mercifully prevents them from knowing that they are dead. You do not realise that your plane is the plane of death, and that our plane is the plane of life. Those who are in matter are in the grave, they are dead and buried. Death and Initiation produce the same results, therefore it is that all Initiations contain the symbolism of death and burial.

Always remember that upon the material plane death and loss mean freedom and resurrection.

Possessions are as the earth that is heaped upon the corpse. Learn therefore to look down upon your dead bodies and to galvanise them with your life, but do not make the mistake of living in them.

It is very useful to be able to project consciousness on to the mundane sphere but it is very disadvantageous to be fettered by the conditions of that sphere. You are held to that sphere by two things - fear and desire. Initiation will enable you to live upon this plane, though still attached to brain consciousness. It is therefore that the degrees teach, firstly the overcoming of the desire, secondly the overcoming of fear, and thirdly death and resurrection.

By knowing the Law of Limitation and transcending it you can use it. Having circumscribed the task you have set yourself, see it in relation to the Cosmos. By seeing the Cosmic Archetype you will draw in the force of that ideal and by seeing the circumscribed form which it is desired to manifest, you will focus that force.

With regard to the practical application of this, when a problem presents itself for solution, gather together in meditation. First outline the problem in debate, then meditate upon its Cosmic aspect, and invoke the Cosmic force.

Chapter XXVII. The Law of the Seven Deaths.

The 1st Death.

As has been previously recorded, when two lines of movement intersect a vortex is set up. These two lines of movement then cease to exist and become a centre of stability.

This is the first death.

The 2nd Death.

Learn now the implications of death. Action and reaction are equal and opposite upon the plane of their inception. They act, react, and continue to manifest in cyclic form. When transmuted from one plane to another they cease to manifest upon the first plane and come into being in a different form upon the next plane. If this translation be viewed from the plane of the inception of these forces it is called death.

If it be viewed from the plane of the reception of these forces it is called birth.

If an involutory change be viewed from the more primitive aspect it is looked upon as death. If it be viewed from the more evolved aspect it is looked upon as birth. This is the second death.

Let us make this clear by an example. Life, having evolved beyond the capacity of lowly forms to give it expression, builds itself higher forms. The fossilized remains of the abandoned lower forms are found among the debris of life, they have undergone death. Their race is extinct. They are no

more. But the life has achieved rebirth into a higher type of vehicle. It is only by the abandonment of the simpler form that life could enter the more complex, though consciousness that is in the plane of the simpler form sees herein a tragedy because it cannot conceive the higher life and it sees its own passing prefigured; but the consciousness which is of the higher life sees the birth of a new manifestation and rejoices, for it sees the fuller expression of its potentialities.

The 3rd Death.

Each individualised consciousness lives to die and dies to live. It is only by death that we can reap the fruits of life. We graze in the fields of Earth, and we lie down in the fields of Heaven to chew the cud. It has been said 'for one hour's study do three hours meditation'. To each span of life there are three spans of death. In death is the soul's meditation and life its study.

Did you but live, all experience would pass through consciousness and leave but little impression after the first few pictures had filled all available space. All would be concrete, unrelated, unsynthesised, but in the meditation which is death the abstract essence of life is extracted and instead of a million concrete images there is the abstract concept.

It is death alone which enables you to utilise experience. Learn to trust death. Learn to love death. Learn to count upon death in your scheme of things, and regularly perform the exercise of visualising your self as dead and conceiving how you then shall be, for thus you will learn to build the bridge between life and death so that feet shall tread it with increasing ease. See yourselves as dead and working out your destiny. See yourselves as dead and continuing your work from the plane of the dead. Thus shall the bridge be built that leads beyond the veil. Let the chasm between the so-called living and the so-called dead be bridged by this method that men may cease to fear death.

The 4th Death.

Four is always the linking number; the fourth body being the highest aspect of the personality links it with the individuality, and the fourth death is called the linking death - the teaching death - or alternatively may be known as sleep.

Sleep is a miniature death, just as death is the major sleep, and a knowledge of the nature of sleep assists to explain death. The nature of sleep is insufficiently understood. The impressions of sleep received by the waking consciousness are misleading. In sleep the physical plane is dissociated from the other planes, and the soul thus freed receives no longer the impressions coming through the five gates of sense and we say 'it sleeps and is passive' but the individuality works and is active. In waking life the Individuality sleeps and in sleeping life the Individuality wakes. The Individuality is referred to in the sacred writings as the 'Angel that ever beholds the face of God'. During the waking life of the body the Individuality is intent upon translating into its own terms of abstraction the concrete impressions flowing into the lower soul. When it is no longer thus intuned, subjective, because the lower soul is not pouring upon it impressions, it becomes objective upon its own plane and beholds the 'face of the Father'. It then measures itself by the Divine standard and makes such adjustments as are within its power; but the adjustments of the spirit are aeonial and are measured by the span of Heaven.

During sleep the lesser soul may not, however, sink into oblivion, but being much concerned with the unsatisfied desires of the flesh it will continue to function in relation to the thought-forms begot of these desires. It dreams the dreams derived from unsatisfied passions and the urge of the instincts.

The Individuality is not freed and instead of beholding the 'face of the Father which is in Heaven' beholds the reversed image of the human form and thereby develops in its own likeness.

The Individuality, being unable to function on its own plane, makes no growth and remains unevolved, and the personality becomes an exaggerated caricature of itself. From this it can only be freed by the third death, thereby enabling the Individuality to assert itself. But if the third death be incomplete the lower soul will continue to dream upon the Astral Plane; this leads us to the question of the Fifth Death.

The 5th Death.

Is the death of the personality. The personality, being withdrawn from the body, yet continues to

live and to function as a personality and the man is in no wise changed and still answers to the name he bore in the flesh. In the lower Hells he burns with desire until the possibilities of desire are burnt out. Desire then remains only as an abstract idea and is part of the Individuality. He then dies to the lower desires but continues to live in the higher desires.

These in their turn he learns to be finite and mortal, he finds them to constitute barriers between himself and his Father 'whose face he would behold', and he desires to escape from them. He would no longer love with the personal love which loves a person, but the higher manifestation of love which itself is love and loves no person or thing but is a state of consciousness in which all is embraced. He then seeks freedom from the lesser love, and with this desire for escape from that which is good though finite in order to realise the good that is infinite, causes the fifth death, and he is born into consciousness of the Individuality and lives upon the plane of the Individuality, perceiving 'the face of his Father which is in Heaven' but with the waking of desire come again the dreams and with the dreams come the recall into matter, the Spirit 'beholding the face of its Father' until consciousness is weary with its brightness, closes its eyes and sleeps, and sleeping, it dreams of its unfulfilled desires and so it is born again, for upon the plane of desire a state of consciousness is a place, and as we desire so are we reborn, thus each man makes his own karma.

It may be asked how then is it that men make for themselves suffering and limitations which they could not desire? It is because they do not reap the fruits of fantasy but the fruits of actuality. They are given the results of that which they have permitted themselves to desire, not the thing they desire.

To exemplify - the man who desired power would obtain vanity. To obtain power he would have to desire the qualities which confer power - strength, foresight and wisdom. The man who desires power builds for himself the consciousness of the vain egotist. The man who desires strength, foresight and wisdom, builds for himself the consciousness of power.

The 6th Death.

Is trance. In trance the body sleeps but the soul is awake. It is active upon its own plane. It functions objectively in the sphere of its upper and lower aspects. It may function upon the sphere of its lower aspects, the instincts, with the body as a background; or it may function upon the sphere of its higher aspects, and concrete mind, with the emotions as a background. This is the plane of normal psychism wherein picture consciousness portrays the events of the inner worlds as in a magic mirror. The conditions of the focus being determined by the emotional states.

When psychic consciousness is focused by the instincts and passions with matter as a background, consciousness is transferred to the etheric matter which is withdrawn from the dense vehicle in order that it may not act as the vehicle of passionate desires, then are seen the manifestations of the lower magic, dangerous and evil in all its forms - degrading to the personality because its life is lived in relation to matter and not to spirit. Live all life with God for a background, and measure all your deeds against the span of Heaven and assess them in relation to the Cosmos, so shall your sin seem grievous in your sight, and your errors very small.

The 7th Death.

Is Initiation. In the Seventh Death consciousness is withdrawn from the personality and made one with the Individuality and then a man ever 'beholds the face of his Father which is in Heaven' even when he himself sojourns upon Earth. Thus it is that the Initiate is not as other men.

Initiation is a living death.

Those who desire the things of the senses and the pride of life use the words 'living death' to explain the most terrible fate that can befall a man, but those who have knowledge know that the living death means the freedom of the spirit brought through to the planes of matter. It means the consciousness of the Abiding Presence in the midst of the consciousness of the senses. It means awareness of Heaven while dwelling upon Earth. Therefore the Initiate goes to the living death which is freedom while still in the body, for death annuls the Law of Limitation, frees the potentialities of the spirit, gives sight to the blind, and power to the impotent. That for which we longed vainly in life we realise in death, for death is life and life is death.

To the wider consciousness the womb is a grave and the grave is a womb, the soul entering upon

life, bids farewell to his friends who mourn for him, and taking his courage in both hands, facing the great ordeal and submitting to suffering, enters upon life. His first action in life is to draw breath.

His second action with that breath is to set up a cry of distress, because he entered upon the task of life with grief, and his aim in life is to make life bearable, but when he enters the grave he passes through the gateway into the wider life of consciousness, and when the Initiate would pass to the wider life of consciousness he passes through a gateway which symbolises death, and by his death to the things of desire he obtains freedom, and as one dead he walks among men.

In the death in life, which is the freedom of the spirit in the bonds of the flesh, he transcends the Law of Limitation, being dead he is free, being dead he moves with power among those buried in the flesh, and they, seeing the Light shining brightly through him, know that he is dead, for the Light cannot shine through that consciousness, but when consciousness is discarnate the Light shines through, and if the discarnate consciousness is still manipulating its body, then that life shines through into the world of matter and illuminates man.

But remember this and meditate upon it, - an Initiate is a dead man who manipulates his body that he may thereby serve those who cannot otherwise be approached.

Summary of Chapter.

Deaths.

1. Neutralisation of two movements.
2. The transmutation of force from one plane to the plane below.
3. Death of the individualised consciousness and abstraction of the absolute essence of life in meditation.
4. Sleep - the linking or teaching death; objective on its own plane.
5. Death of the personality and of all its desires.
6. Trance. The body sleeps but the soul is awake.
7. Initiation. Consciousness withdrawn from the personality and made one with the Individuality.

Chapter XXVIII. The Law of Impactation, or the Transmission of Action from One plane to Another.

The true method of Impactation is but little known because it involves the inner principles of polarity.

Impactation may be defined as the act of bringing a force of a subtler plane through to a denser plane upon the involutionary arc. This must be distinguished from degradation. Degradation is a similar act upon the evolutionary arc. We speak of the de-gradation or the sublimation of a force upon the evolutionary arc, and of impactation and disintegration upon the involutionary arc. An important concept concerning the dynamic standard of good and evil is contained in this distinction.

Impactation then is the act of advancing a force in evolution by developing it upon the 'form' aspect.

You must remember that the stream of evolving life issuing from the Logos has to descend into matter in order to be organised, and having developed 'form' by its confinement in matter it uses that form as a mould, or more strictly speaking, a framework (for the subtler surrounds the dense), and when the framework of the dense is withdrawn, the subtle maintains the form it assumed because the system of stresses then developed becomes a habit.

The act of sublimation is to separate the dense from the gross and the gross from the subtle. But the act of impactation is to lock two tangential forces of the subtle into a node of the dense. This, you will perceive, was the method of the creation of the atom.

Let us make this clear by example. It is desired, let us suppose, to realise an abstract concept in concrete form. To do this it must be realised that there are two sides to every question and that each side has elements of good and bad - construction and destruction. Construction of the higher means destruction of the lower. All things die to the birth. The involutory and evolutionary aspect of every problem has to be envisaged. Perceiving then these two aspects you will see that there are certain considerations which if regarded alone, would lead you to proceed in the opposite direction to that which you contemplate. That is to say, you would abandon your original intention and turn back towards the centre. Other considerations, however, induce you to press out towards the circumference, you will therefore always find, in every consideration, you are torn two ways. A unanimous decision is impossible, and it is a unanimous decision which is necessary in order to bring to birth upon a denser plane that which is conceived upon a subtler plane. It is, therefore necessary, that in such a matter you should have co-operation from an entity of a different type to your own, so that the consideration will be reversed, so that that aspect of yourself which would return to the centre finds itself complemented by a similar aspect in the co-operator which would press outwards towards the circumference - not two halves but four quarters.

Then comes the figure of the exchange of partners and you have two wholes instead of four halves. One wholly positive and one wholly negative. One turns back towards the centre. One sets out towards the circumference. They come into alignment and the force can pass through them.

The force intensifies all qualities. That which sets towards the centre draws towards the centre. That which sets towards the circumference draws towards the circumference. Then comes re-polarisation. Each of the two halves temporarily joined draws apart and affects re-polarisation within itself into a positive and negative aspect - consciousness and subconsciousness - personality and Individuality - and re-forms itself. You then have four wholes on two planes. This is a subject which requires meditation. It cannot be comprehended without a key.

Have you realised the import of that which has been given? We have given you the lock, but the key cannot be given you so freely. The key must not be written down.

The drawing apart of that which inclines towards the centre from that which inclines towards the circumference explains many things. Firstly the gulf between personality and Individuality and heredity That which is projected into the denser, being formed from the framework of the subtler, retains the stress habit of its original.

Equally, when the process is not that of the normal advance of life, but a special operation undertaken at the bidding of the will - not the desires - that which is impacted is a reflection of the combined nature of the impactors.

The impactors, therefore, although they separate according to the Law of Reaction and the Law of Magnetism that like repels like, are permanently linked by means of the common bond to that which they have created.

The symbol is that of the inverted A in which the two converging bars represent the creators. The cross bar the line of demarcation between the planes, and the lower incomplete triangle the created. The cross bar is known as the bar of impactation and you will see its vital significance in all practical operations based upon this principle.

The bar of impactation must be included in the projected aspect in order to complete it and make of it a triangle, the simplest form of closed figure. The impactors can then detach themselves at the line of demarcation and be free to function as independent units upon their own plane, but the system of magnetic stresses remains behind attached to the bar of impactation which forms the upper line of the triangle, and when the triangle seeks to cross the bar and develop into the mighty Alpha it follows the lines already laid down.

Now these lines, being projections into subtle matter of the basic angle of the triangle, enable consciousness of the type of the impactors to contact it. Hereby you see the way in which the Master approaches the pupil.

There are two kinds of birth. Firstly that which is in the ordinary course of nature; and the incarnation of a consciousness of a loftier grade than that which requires manifestation in matter for its development.

In the latter case the soul impacts itself with the assistance of another of a similar grade. The one which desires to manifest presses towards the circumference, and its partner in impactation returns towards the centre, but these two maintain contact by the prolongation of the angles. And when consciousness is raised you get the symbol of the six pointed star which is the symbol of Initiation. This explains the phenomenon of four quarters instead of two halves. It explains the phenomenon of the Christ and the Jesus, and of all greater and lesser selves.

There are, no doubt, many points in the foregoing remarks on which you will meditate before you will perceive their significance.

The act of impactation is based upon the use of the Laws of the Attraction of the Centre and the Attraction of the Circumference, and the use of polarity, and in all elaborations of the concepts of polarity the Law of Impactation comes into function because polarity gives rise to impactation, and impactation depends on polarity wherein union takes place horizontally and fissure takes place vertically.

Chapter XXIX. The Law of the Aspects of Force or Polarity.

Just as it was impossible to consider the Law of Impactation without considering the Law of Polarity, so it is impossible to consider the Law of Polarity without considering the Law of Attraction of the Centre and the attraction of the circumference, because Polarity has its basis in these two laws.

It is according to whether the attraction be towards the centre or the circumference that the negative or positive aspects of force are observed.

The attraction towards the centre gives the negative, and the attraction towards the circumference the positive aspect, and it is those two in polarity that produce the circulation of force. You see the prototype of which this is the correspondence, in the positive and negative aspects of the Cosmic Rays. The glyph of this is contained in the Caduceus of Mercury. There you see the black and white serpents of positive and negative functions twined from side to side of the staff.

Taken in its mundane aspect the staff represents the Ray and the black and white serpents the positive and negative aspects of the Life-wave.

A glyph needs generally for its understanding the superimposition of another glyph belonging to the next plane, thus representing a practical application of the Law of Impactation. Place upon the glyph of Mercury - otherwise Hermes, Lord of the Mind - the glyph of Orpheus, Lord of the Elementals, place the musical scale upon the staff of wisdom and you will see the places marked off on the staff. Then place the inverted A with its basal angle upon whatever plane you wish to consider and you will see the implication of the prolongation of the angle. You will then perceive that, that which appears as a unity upon one plane is prolonged into a duality upon the subtler planes.

Take the two points of your duality, reduce them a plane according to the Law of Correspondences, taking these two lower points as the basal angles of the upper A and you can circumscribe your hexagon. You will then see that the highest angle of your hexagon is in exact correspondence with the lowest angle, and that the two side Rays upon each side may be connected by lines representing their respective affinities.

This gives you the clue to the horizontal and vertical polarity which is the Cross of Regeneration. Polarity according to the horizontal account is horizontal - two of a kind, opposite in type. Polarity according to the esoteric concept is vertical and has its clue in correspondence. Place the Cross on the hexagon, and the hexagon on the Caduceus and you will see the significance. Let the basal point of the six-pointed star rest upon the densest plane under consideration. Let each pair of lateral points rest upon a plane, and let the transverse bar of the Cross be the bar of impactation, you will

then see the manner in which any given set of forces will work. This is a method of divination. Now in considering the Caduceus, which is the symbol of polarity upon the planes, note that the serpent as it passes from side to side of the staff goes from the positive to the negative side of the Ray. This will teach you that a force which is positive upon one plane will be negative upon the plane above; whether you are considering the emanations of the Zodiac or the levels of consciousness this is equally true.

Polarity is always inverted, plane by plane. This will give you a further clue to the significance of the four quarters. If you raise consciousness you change polarity.

Whenever union takes place between two aspects upon a plane, they develop a similar magnetism and becoming repellent thereby they are forced apart. If therefore contact is made upon but a single plane, repulsion and estrangement follows, but if contact takes place upon more than one plane alternation of magnetism is set up and a circuit of the type of a figure 8 is built. Four quarters again. This holds good whether of men or of movements. Polarity upon the planes always exists as four quarters. This is the clue to much.

You will have perceived in the foregoing teachings, certain applications of the abstract to the concrete which it is not expedient should be concreted even in the abstract. Taking these as your basis proceed further.

When one desires to project a manifestation from a subtler plane to a denser plane on the involutory arc, it summonses to its assistance another, and the two detach and project each a part of their substance. Viewed from the denser plane the projection appears as one; viewed from the subtler plane the projection appears as it really is - a projection.

Whenever the one is considered it is necessary for its understanding to project it into the subtler planes until it reveals the two, for of the dual nature it would partake, and it is this duality of nature which is the clue to so much in both men and things, therefore remember that when dealing with any form, one can always be resolved into two, and for a production of a new object two are always essential, and it is upon this subtle action and reaction and balance of force that ultimate issues depend.

Thought will enable you to perceive that you have herein an explanation of the basis of physical generation, you have also the explanation of the creation of 'familiar' or artificial elementals which though abused, have their uses.

It is possible, however, to create and project a thought-form without the interposition of a second entity by polarising the personality and Individuality. Normally, if you read correctly the glyph of Hermes, you will perceive that the polarity of the seven bodies is alternating and opposite. If you effect the re-polarisation so that the whole personality should be negative, and the whole Individuality positive you effect the condition in which creation of minor forms is possible within the entity. These, however, cannot sustain any independent life, but have to be fed and maintained by their parent. This polarisation is effected by neutralising the characteristic activity of each body of the personality, and intensifying the activities of each body of the Individuality so that all inhibitions are removed, and this produces a state of instability, and therefore cannot be sustained for long. You will perceive that here you have certain important clues to the practice of that which induces that which is not in that which thinks it is, but is not.

The opposite process in which you have the inhibition of the Individuality and the intensification of the personality produces a certain type of mundane genius which burns brightly to its own destruction.

You will perceive then that there is the co-operation of the two for the production of the third, and the re-polarisation of the two aspects of the entity for the projection of an expression.

There is also another aspect upon group form. The consciousness of a group is an entity of a negative or female type. It requires to be stimulated by a positive force before it can become creative. That which functions on a subtler plane is positive in relation to that which functions on a denser plane. Should a consciousness conceive the aims of a group on a higher plane than that on which the group conceives them, it becomes positive towards that group and thereby can fertilise it. When fertilisation of a group occurs each of the individuals of that group becomes pregnant with

a new life and brings creative work to birth upon the physical plane. They will then have conceived that which the group leader has begotten and will then be upon the same plane as the Leader. Having conceived the same ideal they will then be of the same polarity as the Leader and it will no longer be possible for him to bring a creative stimulus to that group. This will explain to you the process of florescence and degeneration which groups undergo, but periods of quiescence are not of necessity death.

You will observe that throughout all manifested life the co-operation of two factors is essential for all 'form' building. Force, however, works as a unit because its polarity is in the Logos.

Chapter XXX. The Law of the Attraction of Outer Space.

In considering the Law of the Attraction of Outer Space we have first to enquire how it is that the attraction of outer space is able to overcome the attraction of the centre.

In order to understand this problem we have to consider certain basic aspects of the universe which have been previously described.

The Logoidal consciousness, having attained equilibrium, has achieved perfection, and having attained that which it had conceptually realised, propounds a further conception and seeks its realisation.

These formal concepts already conceived within the Logoidal consciousness are continued into more complex syntheses, thereby partaking of the nature of succeeding developed phases of manifestation, or to express the same idea in another terminology, are passed outward down the planes of manifestation. The growing points of the Logos are projected into manifestation as evolutionary impulses.

The thrust outward then, is initiated by the Logos and form succeeds form in phases of manifestation down the planes, the will of the Logos which projects the forms, ensouling them with life.

Now it is ever the aim of will to function unconditioned, just as it is ever the tendency of form to condition the unmanifest, and the will-to-live of the Logos always entering upon the conditioning form, (which, as it were, it pushes ahead of itself down the planes,) is irked by the form; but in the later phases of the Logoidal life unconditioned will is impossible, all action being determined by preexisting conditions, and the will-to-live of the Logos, which is the life of the manifested universe, has to submit to conditions and be bound in form. Hence the warfare between spirit and flesh.

The life and will of the Logos then, expresses itself through succeeding phases of form until the densest phase is reached. It can no further project the conditioning vehicle of its manifestation, and it strives to free itself from the bondage of form, and continue onwards - to employ a metaphor of space - towards those areas of the ether which have not been circumscribed and conditioned by the primal Logoidal will. It is the endeavour of conditioned life to become unconditioned which forms the prime urge - which projects it towards outer space.

Secondly there is the natural tendency towards equilibrium, and of the forces under high pressure within a manifested universe to diffuse themselves into the comparative vacuum of outer space.

Thirdly there is the picture of the penumbra - all those moulds which are marred in the making - all those evolutionary concepts which fail in their realisation - all misplaced forces and souls that have failed in their tasks, being rejected by their Individuality - all that in fact, which it is desired to reject from the Logoidal consciousness and which has been disintegrated against the inner shell of the Ring-Pass-Not, remains as an image in the reflecting ether of space upon what may be figuratively termed the outer surface of the Ring-Pass-Not immediately between that and the Ring Chaos of that universe, and there may be described.

Any consciousness then which ventures to the nether side of matter will discern across the great gulf, which is the Ring-Pass-Not of the universe, the reflected images of all falsified hopes and abortive attempts at manifestation - and these, as it were, craving for the force which should bring them into manifestation, call across the gulf to whatever elements are akin to them in that which presents itself at the barrier, and so it is that all evolving force whether in the universe or in the Individuality, having penetrated to fundamentals, looks across the great gulf fixed by Cosmic law and sees the simulacra of its hopeless dreams promising fulfilment, and is tempted to continue forward on that path of outgoing upon which the Divine momentum projected it, and by means of the further momentum acquired by its own motion to leap that gulf into the freedom of outer space where there is no law and men are as gods. For when a unit of consciousness escapes from a manifested universe by transcending law, because law is consummated in a perfect obedience, it becomes the nucleating centre of a new Logoidal Sun, this is the mystery of Godhead; but when a unit of consciousness that has not mastered the law so escapes, it is an unconditioned will, this is the mystery of evil, personified as devil.

This temptation of the nadir comes to all in the course of evolution. From the Divine upon the outgoing arc life has to penetrate into the fundamentals, and having touched the fundamentals, having attained the summit of its powers, it has to reject the temptation of the desire-images reflected from outer space and retrace its steps in humility back to the source of its life, winning the realisation that freedom is attained, not by escape from limitations and conditions, but by adjusting the balance to a perfect equilibrium.

Equilibrium of conflicting forces, being attained, form is stereotyped and can be left to form the corresponding consciousness, and the ensouling life withdraws to a higher plane bearing with it the reaction-capacity acquired on the lower plane, but no longer bound by the conditions of that plane. This will be dealt with more fully in the succeeding lecture.

The attraction of outer space then, is the attraction of unconditioned power, it is the temptation to escape from the laws that have built us up, and to exercise the powers gained under these laws without the equivalent responsibility. This may be seen exemplified in the life of the man who, enjoying all the advantages of a highly developed culture, brings to them the aims and the ideals of an unevolved state of existence. The attraction of outer space is the temptation to break away from evolution and the Cosmic law and to function as a god. Such gods are those who are propitiated in the rites of devil worship.

Chapter XXXI. The Law of the Attraction of the Centre.

The Law of the Attraction of the Centre contains the secret of the mystery of Love. It may be considered under three aspects:- Firstly in relation to evolution, secondly in relation to Initiation, and thirdly in relation to devolution and the left-hand path.

(1) In relation to evolution.

When a form of life has attained its utmost complexity of material organisation, unification begins. This is obtained by means of synthesis upon a higher plane, and this having been secured, devolution of the physical form set in. This marks the transition through the nadir of the evolutionary arc.

Let us elaborate this concept. Ideas of life expression, having been evolved by entities of a higher grade than the life-forms under consideration, such ideas are projected upon these life-forms in the etheric kingdom as they are approaching materialisation, and in the malleable matter of the etheric type they are worked out, and this acts as a framework for the subsequent physical form.

The life forces, compelled to circulate in the forms built in matter, develop a set of magnetic stresses. These having been developed, the material form can be discarded, and the system of

magnetic stresses remains as an etheric mould.

Thus does an inceptive idea pass through the plane of manifestation of matter and become a conceptive idea.

There are many different devices employed for obtaining the same result, and though each of these owes its inception to a different inceptive idea - a different attempt to work out a design - the conceptive idea of perfect adaptation is the same for all. So that that which was multiplicity in its origin, by the perfection of its development arrived at unity.

One is the symbol of the First Manifest. Whatever reduces multiplicity to unity - or a 'complex concrete' to a 'simple abstract' - is approaching the centre. The approach to the centre is not a movement in space, but a unification.

Now note the difference between unification and simplification, because this is the clue to much. Unification is achieved by evolution and simplification is achieved by devolution. Unification is the full synthesis - simplification is the ultimate analysis, or return to type. One is the advancement to completion, the other is a re-gression to the commencement.

The concept of the return to the centre might be considered as an extension of the centre, for when return to the centre takes place the centre is thereby extended, and we are taught that the return to the centre is the goal of evolution.

If this idea be meditated upon it will be seen that such a return to the centre should involve the extension of the centre, for if all that is external becomes internal the boundary must be extended. In very truth it may be conceived that the return to the centre means that the centre is extended to the circumference and all things are as is the centre. This implies the spiritualisation of all the planes. Such a concept has two aspects - the form aspect and the force aspect. Force flows towards the centre, withdrawing from the circumference. It therefore follows that the centre, to accommodate it, must flow out. Thus it is the substance of each plane, having had its native form withdrawn, is recast by the influences of the extending centre into approximate forms to those which prevail upon the seventh plane.

The withdrawing of force marks the end of a Cosmic Day and the beginning of a Cosmic Night.

The outflowing of the centre is the work of the Cosmic Night - and the secrets of the Cosmic Night have never been revealed before.

The outflow of pure spirit over all planes of matter takes place during the Cosmic Night, and the Archetypal forms remaining in the vicinity of the magnetic stresses are thereby galvanised, but they have no real life, having as yet no incarnating principle, and therefore no memory. And at the end of the Cosmic Night the spiritual tides withdraw leaving the field to the emptiness of the Cosmic Dawn. But the forms over which the Cosmic Tide has flowed have been adjusted to Cosmic stresses and therefore all types of evil have been corrected.

This is the cleansing of matter which takes place between each Cosmic Day and neutralises the forces of inertia, and as the forces of inertia have their roots in the Law of Limitation, and the Law of Limitation has its roots in Cosmic evil, you will see the significance of the work of the Cosmic Night, and you also see the deeper significance in the words 'The Powers of Darkness'.

It is necessary, if you are to understand the deeper implications of occultism, that you should see that darkness leads through twilight into dawn, and day leads through twilight to darkness.

Good and evil may be conceived of as areas of light and shadow through which a spinning ring evolved, and evil has its work to do as well as good. The God of Light and the God of Darkness are but the actions of the Right and the Left Hand of the Father. The Right-Hand gives and the Left-Hand takes away.

The Right-Hand gives that which is to be, and the Left takes away that which has been. The Right sends out into manifestation and the Left beckons back again; but you, looking as in a mirror, call Right Left, and Left Right.

The attraction of the Centre takes place up the path of returning, and should that attraction set in prematurely it causes the life to flow back to an earlier aspect. This involves a devolution of life before there is a devolution of form.

When this returning flow takes place in relation to Life we see the development of parasitic types

of existence. This explains the problem of bacterial disease - other types of life which are saprophytic are not of this evolution at all, but are functioning under the dominion of the 'Lords of the Dark Face' who are scavengers of the Gods.

It may be said, in parenthesis, that there are two types of bacterial disease - parasitic and saprophytic - which may occur independently or simultaneously. This is an idea which could be elaborated but it will not be done now. You will perceive from the foregoing that a return to the centre means a fading of a Day of Manifestation, and as the daylight fades the spiritualising darkness of the unmanifest flows over the fields of matter. And this must always be borne in mind in considering this problem, for as the light withdraws from the outer circuit of matter, so the spiritualising influences begin to flow out from the innermost circuit of spirit, and this process continues until such time as all light be withdrawn, and the concentric circle of manifestation be completely overflowed with the Cleansing Waters of Darkness; but meanwhile there is a transition stage during which the Waters of Darkness, which is a symbol of peace, cleansing and regeneration, make preparation for new life. These waters then, are percolating through the planes of manifestation so that the seen will be interpenetrated by the unseen. This brings us to the second aspect of the subject of the attraction of the centre, the question of Initiation.

(2) In relation to Initiation.

Those entities that have returned to the centre at the conclusion of their evolution flow out again as the forerunners of the Shadow of the Spirit. It is these who are the Initiators. They themselves have been enabled to progress in advance of evolution by being themselves initiated by developed entities of previous evolutions according to the planes on which they took Initiation, the Lords of each plane being the completed fruits of the evolution which had its culmination on that plane. These are the Initiators of each evolution until those who are Initiated, themselves having passed through the life, are proceeding outwards again. By the action of these entities those who are Initiated proceed from the surface to the substratum of their plane and it is only when the Waters of Regeneration have penetrated through the cracks and fissures of receptive consciousness to a plane, that Initiation can take place on that plane. Thus it is that at this stage the greater illumination can only take place out of the body, for in this phase of evolution the Waters of Regeneration have not yet reached the physical plane.

(3) In relation to devolution.

The attraction of the centre has a third aspect in devolution, or the way of the left-hand path if applied to consciousness.

In relation to evolution, devolution means the withdrawal of life from any given type of form, and the disintegration of these forms. The systems of magnetic stresses which life generated in them are then left as empty shells upon the etheric sub-planes. These shells should wait the cleansing of the Waters of Regeneration that flow out in the tide of the Cosmic Night.

It sometimes happens, however, that souls which are sufficiently developed have reached the point when they feel the attraction of the centre upon the path of returning, yet are insufficiently developed in certain aspects to be ready for evolution because they have not yet sufficiently undergone involution, these may set out to return to the centre before they have passed the nadir. They will then be moving through planes from which the life has withdrawn and whereon lie the empty shells awaiting the coming of the tides of the Cosmic Night. These souls will then avail themselves of the systems of magnetic stresses of primitive types for the expression of their functions. This will explain much if meditated upon.

When, however, these souls, having outworn and destroyed the shells, and thereby impeded subsequent evolution, continue on their devolutionary path, they reach a point where there are no more shells for their ensouling, and they will then be unable to maintain form, and will dissolve into the unorganised elements of substance and cease to be potent for evil or potential for good.

That is the record of the left-hand path.

Evolution by the right-hand path is accomplished through the withdrawal of the perfected life from the forms which separate - the synthesis of the principles which the forms were designed to express - the sublimation of the principles into ideals, and the realisation of the ideals by Cosmic

consciousness. Such is the record of evolution upon the right-hand path.

It will be seen then, that the essence of evolution is unification and the manifestation of the unificatory principle upon the planes of manifestation is Love. Whether that love be intellectual sympathy on the plane of the concrete mind, or physical unity on the plane of matter, Love in all its aspects is the symbol of the Logos as One.

The aim of evolution is to make all things One, and upon the plane of manifestation there are but two things which make all things One - death and Love. Death is the manifestation of the left-hand path, and Love is the manifestation of the right-hand path. Whoso loves, however dim may be his concept of Love, is manifesting a unification and unification is the goal of evolution. God is One. Love makes One - therefore it is truly said "God is Love".

Whosoever expresses Love brings Spirit, which is One, into manifestation. To be loving is to be good.

Whosoever expresses hate brings separateness into manifestation. To be separate is to be dead. Therefore choose Love and live.

Additional Information:

The additional material set out here has the same authority as the body of the work, but was communicated some years after it.

While it has in many instances a specific reference to certain chapters it is not here given with that reference to those chapters since it has also a general reference to the teaching as a whole and provides a useful elucidation of the general matter in the book. Generally speaking it refers more to the first twenty chapters of the work than to the later but, of course, the more the book is understood as a whole the more useful will the additional material be.

(1)

Each Cosmic Atom has within itself forces of two Rays which set up the primal vortex though later it went out along the path of one Ray only. The two Ray-forces are the positive and negative factors in the vortex, the negative or latent representing a sort of subconsciousness. Examination of the "Ray-type" of an individual would call for Sidereal Astrology - a far more complicated and deep astrology than astrology as now practised.

(2)

The Lords of Flame and the Lords of Mind do not meet upon the planes in the progress of the First Three Swarms, but there is a process at a later date whereby a Lord of Flame can as it were fuse with a Lord of Mind, thus becoming to all intents a Lord of Mind. The process is very difficult to describe: there takes place a kind of absorption so to speak, somewhat comparable to the coalescence of an Individuality with a highly developed Personality in a human incarnation, somewhat comparable but not the same. A Lord of Mind who chooses to carry on certain work for a Lord of Flame absorbs the "experience" of the Lord of Flame somewhat in the manner that an Individuality absorbs the experience of a Personality (but in this case the comparison is reversed since the Lord of Mind corresponds to the Personality absorbing the experience of a Lord of Flame corresponding to the Individuality) and goes forth as a Lord of Mind with the far-off contact (of a Lord of Flame) still working behind him.

Many of the Lords of Flame are what we now call the Archangelic Forces, others guide certain conditions in the universe and have a special contact with the Solar Logos. It is these latter which so to speak steep certain Lords of Mind in their experience and pass their influence into them, thus working through them. The Lords of Flame all have an especially strong Logoidal contact and some were what might be termed sent forth again after the First Swarm had finished its work.

It can be of special benefit to meditate on the Three Primal Swarms because that part of the book

which deals with them was set down in a necessarily very approximate manner suited to the "average intellect." It is important to bear in mind that all that is said is only an approximation and far more than a merely intellectual appreciation can be gained through meditation on the First Three Swarms. The material in The Cosmic Doctrine is capable of immense expansion-expansion, indeed, beyond the present limits of human understanding.

(3)

To try to put into comprehensible language and yet give something approaching an adequate delineation of the power and majesty of the Three Primal Swarms is a difficult task indeed. The description given in the body of the work conveys little idea of the mighty work undertaken and performed by those Swarms. Those great Waves of Cosmic Life which built the Laws governing the universe, evolution and man are of great importance at all times and especially at the inception of a new Age. Their influence remains behind in man and the universe, and according as man is in touch with these primal beginnings when his own Life-Spark first entered manifestation even so is the type of his Individuality determined. He cannot even now get away from those early stages of development because as his Essential Self took on the influences and reacted to them in the formative stage of his evolution so does each human being at this stage still carry the latent consciousness of those primal actions and reactions. He carries eternally the seed of his own beginning even as the oak carries eternally the acorn within it, and, as the acorn reacted to the soil in which it grew, as it received the air and the sun, in what measure its growth was made and it gradually cast off its outer shell and began to shoot and become an oak tree, so in a sense did man first begin to become man.

As a man reacted to the various planes through which he passed in these primal stages of the Life-Spark-and even then there was a measure, however small, of individual reaction - even so is that man today. As the Spark came down the planes, gathered substance from each plane, and then returned up again he met other Sparks doing the same thing, and so again is it in his life today. In this mass of Sparks on its first descent of the planes there were some which formed a smaller mass within the whole, touching each other more than other Sparks or Groups of Sparks in the whole. Thus did certain special reactions - "friendships" as it were-begin in the primal stages; and in later days of evolution those same Sparks, clothed with matter of all planes passed through, again met those others equally clothed with matter of all planes passed through which had first contacted them in the primal stages. In passing through the planes the matter or substance of each plane was interwoven into the inner vehicles of man and in time built the different forms or vehicles we know now by various names (e. g. the "Astral Body," "Mental Body," etc.) and these bodies have also certain subdivisions. The great planetary spheres through which each atom and Divine Spark passed in the course of evolution also had a certain type of influence over it and in a way this is the basis of astrology, though the roots of that study are largely lost and forgotten. Astrology cannot be applied nowadays as the ancient races conceived it because of change among the heavenly bodies, and man himself is changing also.

In his passage down the planes the evolving being came into contact with great planetary Powers which still exercise some control over him-though he may not be aware of it-for he has matter within his make-up which retains a form of contact with those great planetary Powers and their influence on his body, mind, and karma still remains at very primitive levels: for example the Force described as "The Great Mother" still remains The Great Mother of all living beings and the degree to which a modern man can consciously become aware of this contact is of importance to him.

The great Laws of the Universe were made long before what we call "man" had evolved sufficiently to come down the planes in the same manner as had come down the great atoms and group-forces which in the beginning built the Universal Powers. The "Group-Souls" of these latter are behind what we call the great archetypes and with these archetypes esoteric students can be much concerned. And as man eventually returns up the planes at the end of a chain of evolution he reaches on another level his own beginnings. He becomes as it were a god, a type of Logos, in himself at the end of many evolutions gathering together the great chains of experience which will

have made himself no longer the individual but in a sense a group from which other units of mind-force emanate. For man begins as a group and individualises out of the group as evolution goes on and in the end has to return to his own group which is then himself.

Behind that teaching is the " Collective Principle " or collective sense which, partly or even wrongly understood as it often is, can be found in certain political ideals and systems.

This sense has a high ethical basis and strives so to form the character that all should act as one, should act as a team and in a team ; for it is the greatest, most intricate and first Divine Law when properly understood. Nevertheless, until the individual be developed to his highest, he cannot be part of the collective unit of Divinity to which he should in the end return. And in each man is that which makes the Trinity - the Three Aspects of the Manifesting Godhead - and these Aspects are in his innermost Spirit as its highest ethic.

When this evolution will have finished, the experience and matter of this plane (Earth) will be garnered up and will pass on to other evolutions in other planets and some of its life-forces will return again in another guise to this planet again.

When a man dies portions of his astral and etheric bodies are probably lost for a while to his Individuality, but also they often go to make up certain parts of the new astral and etheric bodies he will have in his new incarnation. That, in a few words, is what has happened all through evolution- the form is broken up and the parts are carried on to build up the form of the next type of life-form ; but it is not always known that particles of the denser vehicles-not the physical, but the astral and etheric-the disintegrated astral and etheric bodies of people who have died, go to make up other Personalities.

These Personalities may belong later to those Individualities from whose former Personalities the parts come, but it also happens that they may not, and Individualities often have Personalities composed of material which previously has been used in the vehicles of others. This sometimes can account for strange reactions between people in incarnation, so that it is not always necessary to look to meetings in previous lives to explain such reactions. As the human being is in this way so, too, are planets and other heavenly bodies. Planets contain portions of other planets and of other Cosmic times and other evolutions built into their auras, just as this earth is in the aura of the moon* and has contact with many " lunar particles " of a former evolution.

Life in its many-sidedness is not simple by any means, it is woven into a vast pattern which only very advanced Inner Plane Adepts can realise, and there is no pattern that is not in some way linked with all the rest.

(4)

The Planetary Being evolves with the planet and corresponding plane. Its " bodies "-up to the full complement of seven - and its content of consciousness increased with the arrival and departure of the various Swarms. The activities of the Swarms 4-7 were governed by the " Lords " of the Three Primary Swarms.

Not until a Planetary Being had developed its full complement of " bodies" could it take a Swarm through the full circuit of -evolution, and not until then did the evolution begin of those Sparks which became " human beings " as we understand the term.

During the descent of the first seven Swarms the influence -of the Logos remained paramount in the universe, and any unbalance resulting from the epigenetic activities of the Swarms 4-7 was immediately corrected so that the " bodies " of the Planetary Beings were not affected.

After the full complement of seven bodies has been acquired by the Planetary Being, however, the influence of the Logos does not fully correct any unbalance because influences from the now fully embodied Planetary Beings intervene. It is at this point that epigenetic factors lay the foundations of individual basic Karma. Each Planetary Being is a stage behind the human evolution proceeding in its sphere, and thus acts as a drag upon it.

(5)

The Three Primary Swarms can be aligned (through the Logos) with the three Cosmic Rings and with the Essences of the Four Elements as follows: -

* The present moon is not here referred to; the previous moon left behind its substance which goes to

make up the aura of the earth. This previous moon left much substance, too, for the present moon, and a great deal of its "powers" or influences are there, but many, too, of its primitive powers and certain very important factors remain within the earth (in what esoterically is called the "Inner Earth"), and both these are as well joined into one huge aura which is around both the present moon -and the earth.

(1) The Lords of Flame with their great " stresses of movement " appertain to the Ring Cosmos and to the Element of Fire.

(2) The Lords of Form appertain to the Ring Chaos and to the primal Earth/Water Essence (the Elements of Earth and Water).

(3) The Lords of Mind appertain to the Ring-Pass-Not and to the Element of Air. Individualism can reach a certain limit only and then is turned back on to a higher arc of collectivism. The limits of the human mind are a safeguard of the human race.

(6)

There will come a time when the planetary spheres no longer hold any Swarms passing downwards on the arc of involution. When this occurs the condition left behind by the last Swarm will gradually dissolve and for a space nothing will happen. Then there will gradually come in a " type of vortex " from outside the plane, something that is seeking development, a kind of non-human "being" which will then go through an involution on a small scale on the empty plane. It will be a very simple kind of life and it will eventually be drawn down to the physical plane; only an experienced student of the subtler sides of esotericism could get any understanding of this form of life-something approaching a new type of Elemental is as adequate a description as any. It should eventually have a connection with a Divine Spark of a much more limited range than the Divine Sparks of the human beings. The subject is a very difficult one to put in words even for approximate ideas; it is in any case, very remote but has interest.

(7)

The Life-Swarms 4-7 are the common origin of all humanity; in their passage down the planes they have created the great archetypes of humanity and the basic human instincts. They represent a great Group Soul, a collective state from which individual man has gradually emerged. They have made that aspect of the universal Laws which are portrayed in the " god-forms."

Not until these Laws had become established did man begin to emerge from this group-state, his emergence corresponding with the acquisition by the Planetary Beings of their full complement of bodies-seven in all.

It is this group-state in man that forms the "collective unconscious" of mankind, the archetypes of which on the evolutionary arc (as distinct from the involutory) man first contacts in dream and vision.

Racial division, therefore, came after this group-state, emergence from which was the beginning of separateness.

Community life in its highest sense remains a worthy ideal for its principles seek to replace separateness with cooperation.

These Swarms gradually built what might be called the immediately prehuman shape - even at the time of the fourth Swarm it was still very "embryonic". They are of especial interest since on the manner of progression of the Swarms is based the beginnings of what are known as the " Root Race " types. In these prehuman stages is to be found much of the History of Man, while the gradual formation and development of the Archetypes might be called " Planetary Embryology."

The human shape as we know it was established by the middle period of the seventh Swarm and the Archetypal forms were due in a sense to the projected concept of the Planetary Being itself which brings through additional concepts of another type than the Logoidal concepts though not necessarily conflicting with those concepts.

(8)

The three "activities" referred to in Chapter 3 as "Movement", "Light" and "Sound" may be aligned with the three Supernal Sephiroth of the "Tree of Life." The numbers assigned to the Sephiroth are connected with the numbers of the corresponding atoms (i.e. of the facets). For example the terrible

simplicity of the three-sided atom and the use of three in Binah symbols are obviously related. The four Threes of the Tarot cards have the same basis. Both the " Tree of Life " and the Tarot will be found to be in line with the tenets of the " Cosmic Doctrine " if the seeker meditates seriously on the subjects.

(9)

The " Divine Sparks " and the Great Entity that is the Logos of our system have a common origin in their Prime (Cosmic) Atoms which derive from the Great Unmanifest. These Prime Atoms of a Divine Spark before that Spark comes under the Logoidal influence can be called the "Seed Atoms."*

* This " Seed Atom " refers to the Cosmos and its difference from the " seed atom " mentioned at the end of Chapter XII is plain.

There is a continuity of development from the Prime Atom formed as described in the early chapters to the Divine Spark in each one of us. Just as the Great Entity has evolved from the ten-sided, or travelling, atom of the Cosmos (which itself evolved from the Prime Atom) so have the Divine Sparks evolved from certain of the less complex atoms brought into the wake of the Travelling Atom, or Great Entity, out of whose concepts the Great Entity has created and projected Its universe.

The difference at this point between a Great Entity and a Divine Spark is one of degree but not one of kind for the Great Entity has experience of all the Rays but the Divine Spark has experience of only one Ray-both have experience of all the Planes.

Certain of the atoms " brought over " from the Cosmos to the Universe by the work of the Great Entity became the Travelling Atoms of the Universe. They are not as complex as the Great Entity but are too complex to settle down upon a plane of manifestation and they return to the centre.

These atoms " brought over " by the Great Entity, which become the Divine Sparks are those which in their journeying to the Centre have their " track in space " impressed with the Logoidal Image and Influence. Thereafter these Divine Sparks became conditioned by the Logoidal Consciousness until the cycle is completed and they became " freed " from this influence and return to their original nucleus of being as Seed Atoms.

There are, therefore, two ways of considering the Divine Spark. You may look at it from the point of view of the Cosmos or from the point of view of Solar Logoidal evolution: but, in reality the Divine Spark is one thing having its origin in the Unmanifest from which it derives its existence and energy.

The Divine Spark does not derive from the Solar Logos but is conditioned by the evolution of the Solar Logos until the cycle of its Solar development is completed. This takes place when the Individuality, as a result of certain evolutionary processes in the Solar Logoidal jurisdiction comes to the point where it need no longer stay in that jurisdiction but is able to recognize its own true being. At that point it is as though the " outer " development of the Divine Spark drops away from it and it becomes again purely a seed-atom to which the Individuality thenceforward owes its allegiance. Thus at that stage the Divine Spark, being freed from the limiting influences of Solar evolution gives rise to that state of perfect freedom within the Individuality, the state of spaceless and timeless existence - consciousness.

The great responsibility that then devolves upon the Individuality on the "Right-Hand Path" comes from that Individuality's now established contact with pure and limitless "energy." The Individuality is conditioned only by its degree of realisation of this contact as it enters on a phase of creative activity; in very truth a god.

Advanced initiations are concerned with the degrees of contact of the Individuality with the inner aspect of the Divine Spark (the seed-atom) and the realisations thereof. The cycle of Solar development is governed by the "Lords of Karma " and it includes the working out of the " tracks in space " left by The " karma " when the karma has itself been worked out, for the Solar development occurs after the " track in space " (of the seed-atom) has received the Logoidal Imprint. Thus until the completion of the Solar development the Individuality is not able to bring through pure power without some of the power being diverted to its own needs.

There is, of course, a wide range of gradation between the earlier and later phases but, broadly speaking, the earlier are essentially concerned with the gradual bringing of the Individuality (after preliminary work on the Personality) into contact with its own true being - the seed-atom - whereas the later are the true creative work of those who have achieved in cooperation with their brethren. The preliminary work on the Personality has to be thoroughly carried out before these phases are entered upon.

(10)

The “ inanimate atoms ” and the Divine Sparks have a common origin in the Great Unmanifest. They have both been “ brought over “ by the Great Entity which is our Solar Logos and from the aggregate of their conceptions of their own images the Great Entity has projected Its universe. Everything that has “ life “ in the universe derives that life from its own seed-atom. It is the aim of the Solar evolution to unite eventually the atoms of its universe with their seed-atoms in the Cosmos.

It has been stated that there is a difference of degree but not of kind between the travelling atoms of a universe and that universe’s Logos: similarly there is a difference of degree but not of kind between a travelling atom and an inanimate atom.

Only the more evolved of the Cosmic atoms brought over by the Great Entity became travelling atoms in Its universe at the beginning of the Solar evolution and received the Logoidal Impress on their “ tracks in space.” These - not including the First Three Swarms - which are different-relate to the human evolution and among them are differences in degree of development caused by factors inherent in their make-up.

The inanimate atoms are less evolved than the travelling atoms and receive the Logoidal Impress during the Solar evolution according to their degree of development because being in and of the Solar universe (their concepts having been used to create it) they are continually being bathed in the Logoidal influences and slowly absorb them. In this way we get the Oversouls of plant and animal life, these Oversouls deriving from the inanimate atoms, which are gradually acquiring a Logoidal Impress.

(11)

The basic “sound” of a human being is implicit in the development of a Divine Spark. The Logoidal Impress can be more accurately conceived of as a sound-vibration than a picture concept. This idea of primal or basic sound was behind the ancient teachings of number and numerical values. Sound implies rhythm and vibration. That “Aspect” of the Trinity of the Logos known as the Love-Aspect is the part chiefly at work in the imprinting of the Impress. The higher teaching of the Churches is inspired by this.

(12)

The three Primary Swarms were projected into manifestation each under an impulse from one of the Prime Aspects of the Logos derived from one of the Primary Rings. These Primary Swarms, are set apart from the succeeding Swarms and are of a different degree. The Swarms that followed them developed under the influence of the Logos plus the Three Primary Swarms, the Lords of Flame, Form and Mind. They are, therefore, under the influence of the three Cosmic Rings (as were the three Primary Swarms) but also, since the Logos reacts to the Twelve Cosmic Rays, these later Swarms are characterised by the influence of the Rays predominant at the time they received the Logoidal impulse to go forth.

Therefore the great phases of evolution between the sending forth of fresh Swarms are governed by the influences from the Twelve Cosmic Rays. This has reference to the “ Houses “ of the Cosmic Zodiac and to the precession of the Equinoxes.

Those who energise these phases and typify them are Ray Exemplars; they stand, so to speak, between the Zodiac and the phases and reflect the Zodiacal influences, acting in a sense as Cosmic mediators. These influences then act upon the Planetary Beings.

(13)

There are two of the ancient god-forms which can be called easily to mind as being readily alignable with the Essential Self, most other god-forms being representative of particular aspects,

Cosmic or universal. These two god-forms are Horus and Eros. Of them the former could stand for the Divine Spark, the latter for the seed-atom. For all practical purposes we could say they stand for the outer and inner aspects of the seed-atom respectively. This supernal Eros is far removed from the popular conception which identifies him with Cupid. He represents here the essence of Man which is Eros plus Anteros and springs from the Cosmic Egg like the philosophic concept of that Eros who was one of the -earliest of the Greek gods. This cosmogonic Eros was the earliest force bringing order out of Chaos and he presided at the Council of the Gods and rules over the minds of gods and men: he was one of the gods of the Samothracian Mysteries.

(14)

The star Sirius has always been held in esoteric teaching to have much influence on Solar evolution. Astronomically speaking, of course, the position in space of Sirius is far outside the solar system but from a Cosmic standpoint Sirius and many other stars „condition” the Solar Logos and, since the Solar Logos is Itself Conditioner of and conditioned by Its universe, the influences of Sirius and other stars are transmuted correspondingly before being communicated to the universe.

Therefore, in the purely esoteric sense, stars in general and Sirius in particular (because of its special influence) can be considered in relation to Solar evolution-more especially those which, like Sirius, have had a marked effect on it. The individual, however, must have completed the cycle of Solar -development before he can experience the pure influence of Sirius or other stars.

(15)

Orthodox science studies the materials of which the body of the earth is made and their composition, but the „deeps” of the Inner Earth, the make-up of the Planetary Being is what is most important to esoteric studies. It can be helpful to think of the earth rather as a planet, a globe in the Solar system than as “the world” and a development brought about by many civilisations to one of which we now belong. That which sustained and nurtured those civilisations is the Planetary Being. This tremendous force is sometimes personalised as “The Earth Mother,” but, personalisation or no, all should be aware of the gigantic force involved and of how they are beholden to it. The Archangelic Guide assigned to the Planetary Being might be considered to supply higher aspects to it corresponding to the “Intellectual Principle” in man. The names of these Archangelic Guides as known traditionally can be found in standard works of reference such as The Mystical Qabalah.

(16)

Each planet has within it the principles of a universe (as indeed has the atom) so that the Group soul of the planet’s life comes through in aspects somewhat analogous to the Three Aspects of the Logos. There is something of the Aspect of “Love,” of “Wisdom” and - of “Power” in each planet. Planets have had their “Leaders” who have shown forth certain principles by their conditions of life even as there have been Teachers who did this for the guidance of mankind. These planetary aspects affected certain sections of the human race for they affected the Life-Swarms as they came down. Thus according to the aspects prevalent on certain planets which were in contact with man as he then was so did a particular Swarm receive a conditioning.

These great “stresses of planetary substance” have much influence both in their own sphere and on the Earth because when the Earth was, so to speak, beginning its course in the heavens various influences and substances from different planets penetrated the then empty and uncoordinated mass which became the Earth: these stresses have left their mark on the Earth’s structure and innermost nature and account sometimes for disturbances of one kind or another-earthquakes, for example, for there is still a link between certain substances in the Earth and the corresponding substance in some other planet and the two activate each other and reactions are set up in both.

That is largely the basis of the more accurate side of astrology, but it is too intricate and too remote for most today to study deeply or use as a basis of assessment.

In very early days the most advanced among the priesthood knew about the stellar and planetary “stresses” and the Earth’s magnetism and on that knowledge built a system of which, indeed, something remains though the bases of the system have been forgotten. There are People on the Earth whose psychic faculty can be stirred by such stresses; some people, for example, are sensitive to earthquakes or atmospheric pressures in a way others are not. Such people have in their inner

make-up some of the stresses corresponding to those of the particular planet which is disturbing the Earth. Certain planets influence the "Water", "Fire", "Air" and "Earth" conditions of the Earth by acting on the Earth's aura.

The underlying principle is that of the unity of all. The Earth is not unique; it should be considered for what it is - one of the bodies in the Solar System which has passed through states and conditions which have gradually condensed into what we call the "Earth" but which have passed down from the Moon, Venus, Saturn and other planets.

The Planetary Beings can be considered in one way as the Group Souls of the planets and may be given by the visual imagination a definite form - as indeed in ancient days was done. Out of these Planetary Beings as they affected the mind and character of man were later evolved by vision and imagination into astral forms the forces known to mythology. There is, therefore, a strong link between Planetary Beings and the appropriate god-forms as is studied by some even today.

At the end of evolutions planets change over and different planets go into action during the succeeding evolution so that the subject of astrology at the present day has to contend with difficulties that are practically insurmountable.

There is much to be learnt about the Life-Swarms and the way in which their coming down affects humanity generally in the present. All those ancient happenings and developments must be included in any estimation of the condition of man and his development. During the various historical periods certain Planetary Forces-for Planetary Forces is a more accurate description than "Planets"-influenced the Earth, each according to its special nature; when these Forces are brought to bear again in their turn they bring to the surface conditions corresponding to their nature, they bring them about in the Earth. Although we have used the term "Planetary Forces" we include also certain Stellar Forces working through the Solar jurisdiction, such as the Signs of the Zodiac, but that subject is too vast to be dealt with in detail now. Bear in mind, however, the Sign of Gemini, for the Forces signified by that Sign influenced Atlantis and will influence Earth again later in the present age. The stars are set in configurations somewhat similar to those which influenced the last days of Atlantis: certain major Planetary Forces and Signs are influencing mankind again and though the combinations are different there is something of the same kind of inner condition: the combinations are different but there is something of a similar inner condition and the world, though not deluged by a water cataclysm, is full of clashes and strife of various kinds.

(17)

Let us consider the Second Swarm, the life-wave of those great Regents of the Logos we call the "Lords of Form." They might also be called the "Builders" for through them all form, all shape is developed. The shape that covers or encases the life consciousness is made by the Builders to hold that life for a time sufficient for the life to react as needed to the stresses of the Sphere on which it is after which the life withdraws to another condition leaving the form to decompose into the elements of the Sphere. This is one of the earliest conceptions of "death," so that the Lords of Form are also the "Gods of Death." Where there is death on a large scale, especially death on a group scale as in war, the Lords of Form are intimately concerned for then the whole planet is as it were shaken and its planetary forces need reconstruction. The Lords of Form work with group souls more than with individuals but where a great teacher is instructing mankind (especially if the teaching concerns human evolution) the Lords of Form are at work adapting the "planetary matter" to the new and greater concept of life and evolution being brought through. When The Christ using the body of Jesus of Nazareth, strongly influenced the planet Earth there were very definite though perhaps incalculable changes in the actual lines of the Earth: these were not observable by science perhaps but the Logoidal Forces changed to another course so to speak and the inner forces behind the outer manifestation of the Earth - the etheric structure - began to alter. Form is not confined to outline but is essentially the whole shape and fills the need of Life for a particular shape: the shape does not appear all at once but grows and develops in the course of evolution, as indeed does the life.

The actual outlines or configurations of Cosmic form such as the stars, planets, and large land masses are all influenced by the Lords of Form. The ancients were aware of these very early

Divine Spark of a much more limited range than the Divine Sparks of the human beings. The subject is a very difficult one to put in words even for approximate ideas; it is in any case, very emotive but has interest. (7) The Life-Swarms 4-7 are the common origin of all humanity; in their passage down the planes they have created the great archetypes of humanity and the basic human instincts. They represent a great Group Soul, a collective state from which individual man has gradually emerged. They have made that aspect of the universal Laws which are portrayed in the "god-forms." Not until these Laws had become established did man begin to emerge from this group-state, his emergence corresponding with the acquisition by the Planetary Beings of their full complement of bodies-seven in all. It is this group-state in man that forms the "collective unconscious" of mankind, the archetypes of which on the evolutionary arc (as distinct from the involutory) man first contacts in dream and vision. Racial division, therefore, came after this group-state, emergence from which was the beginning of separateness. Community life in its highest sense remains a worthy ideal for its principles seek to replace separateness with cooperation. These Swarms gradually built what might be called the immediately prehuman shape - even at the time of the fourth Swarm it was still very "embryonic". They are of especial interest since on the manner of progression of the Swarm is based the beginnings of what are known as the "Root Race" types. In these prehuman stages is to be found much of the History of Man, while the gradual formation and development of the Archetypes might be called "Planetary Embryology." The human shape as we know it was established by the middle period of the seventh Swarm and the Archetypal forms were due in a sense to the projected concept of the Planetary Being itself which brings through additional concepts of another type than the Logoidal concepts though not necessarily conflicting with those concepts. (8) The three "activities" referred to in Chapter 3 as "Movement", "Light" and "Sound" may be aligned with the three Supernal Sephiroth of the "Tree of Life." The numbers assigned to the Sephiroth are connected with the numbers of the corresponding atoms (i.e. of the facets). For example the terrible simplicity of the three-sided atom and the use of three in Binah symbols are obviously related. The four Threes of the Tarot cards have the same basis. Both the "Tree of Life" and the Tarot will be found to be in line with the tenets of the "Cosmic Doctrine" if the seeker meditates seriously on the subjects. (9) The "Divine Sparks" and the great Entity that is the Logos of our system have a common origin in their Prime (Cosmic) Atoms which derive from the Great Unmanifest. These Prime Atoms of a Divine Spark before that Spark comes under the Logoidal influence can be called the "Seed Atoms."** This "Seed Atom" refers to the Cosmos and its difference from the "seed atom" mentioned at the end of Chapter XII is plain. There is a continuity of development from the Prime Atom formed as described in the ear

y chapters to the Divine Spark in each one of us. Just as the Great Entity has evolved from the ten-sided, or travelling, atom of the Cosmos (which itself evolved from the Prime Atom) so have the Divine Sparks evolved from certain of the less complex atoms brought into the wake of the Travelling Atom, or Great Entity, out of whose concepts the Great Entity has created and projected Its universe. The difference at this point between a Great Entity and a Divine Spark is one of degree but not one of kind for the Great Entity has experience of all the Rays but the Divine Spark has experience of only one Ray-both have experience of all the Planes. Certain of the atoms "brought over" from the Cosmos to the Universe by the work of the Great Entity became the Travelling Atoms of the Universe. They are not as complex as the Great Entity but are too complex to settle down upon a plane of manifestation and they return to the centre. These atoms "brought over" by the Great Entity, which become the Divine Sparks are those which in their journeying to the Centre have their "track in space" impressed with the Logoidal Image and Influence. Thereafter these Divine Sparks became conditioned by the Logoidal Consciousness until the cycle is completed and they became "freed" from this influence and return to their original nucleus of being as Seed Atoms. There are, therefore, two ways of considering the Divine Spark. You may look at it from the point of view of the Cosmos or from the point

of view of Solar Logoidal evolution: but, in reality the Divine Spark is one thing having its origin in the Unmanifest from which it derives its existence and energy. The Divine Spark does not derive from the Solar Logos but is conditioned by the evolution of the Solar Logos until the cycle of its Solar development is completed. This takes place when the Individuality, as a result of certain evolutionary processes in the Solar Logoidal jurisdiction comes to the point where it need no longer stay in that jurisdiction but is able to recognize its own true being. At that point it is as though the "outer" development of the Divine Spark drops away from it and it becomes again purely a seed-atom to which the Individuality thenceforward owes its allegiance. Thus at that stage the Divine Spark, being freed from the limiting influences of Solar evolution gives rise to that state of perfect freedom within the Individuality, the state of spaceless and timeless existence - consciousness. The great responsibility that then devolves upon the Individuality on the "Right-Hand Path" comes from that Individuality's now established contact with pure and limitless "energy." The Individuality is conditioned only by its degree of realisation of this contact as it enters on a phase of creative activity; in very truth a god. Advanced initiations are concerned with the degrees of contact of the Individuality with the inner aspect of the Divine Spark (the seed-atom) and the realisations thereof. The cycle of Solar development is governed by the "Lords of Karma" and it includes the working out of the "tracks in space" left by the "karma"

when the karma has itself been worked out, for the Solar development occurs after the “ track in space “ (of ‘the seed-atom) has received the Logoidal Imprint. Thus until the completion of the Solar development the Individuality is not able to bring through pure power without some of the power being diverted to its own needs. There is, of course, a wide range of gradation between the earlier and later phases but, broadly speaking, the earlier are essentially concerned with the gradual bringing of the individuality (after preliminary work on the Personality) into contact with its own true being - the seed-atom - whereas the latter are the true creative work of those who have achieved in cooperation with their brethren. The preliminary work on the Personality has to be thoroughly carried out before these phases are entered upon.(10)The “ inanimate atoms ” and the Divine Sparks have a common origin in the Great Unmanifest. They have both been “ brought over “ by the Great Entity which is our Solar Logos and from the aggregate of their conceptions of their own images the Great Entity has projected Its universe. Everything that has “ life “ in the universe derives that life from its own seed-atom. It is the aim of the Solar evolution to unite eventually the atoms of its universe with their seed-atoms in the Cosmos. It has been stated that there is a difference of degree but not of kind between the travelling atoms of a universe and that universe’s Logos: similarly there is a difference of degree but not of kind between a travelling atom and an inanimate atom. Only the more evolved of the Cosmic atoms brought over by the Great Entity became travelling atoms in Its universe at the beginning of the Solar evolution and received the Logoidal Impress on their ” tracks in space.” These - not including the First Three Swarms - which are different-relate to the human evolution and among them are differences in degree of development caused by factors inherent in their make-up. The inanimate atoms are less evolved than the travelling atoms and receive the Logoidal Impress during the Solar evolution according to their degree of development because being in and of the Solar universe (their concepts having been used to create it) they are continually being bathed in the Logoidal influences and slowly absorb them. In this way we get the Oversouls of plant and animal life, these Oversouls deriving from the inanimate atoms, which are gradually acquiring a Logoidal Impress.(11)The basic ”sound” of a human being is implicit in the development of a Divine Spark. The Logoidal Impress can be more accurately conceived of as a sound-vibration than a picture concept. This idea of primal or basic sound was behind the ancient teachings of number and numerical values. Sound implies rhythm and vibration. That “Aspect” of the Trinity of the Logos known as the Love-Aspect is the part chiefly at work in the imprinting of the Impress. The higher teaching of the Churches is inspired by this.(12)The three Primary Swarms were pr

jected into manifestation each under an impulse from one of the
rime Aspects of the Logos derived from one of the Primary Rings.
hese Primary Swarms, are set apart from the succeeding Swarms
nd are of a different degree. The
warms that followed them developed under the influence of t
e Logos plus the Three Primary Swarms, the Lords of Flame, Form a
d Mind. They are, therefore, under the influence of the three Cos
ic Rings (as were the three Primary Swarms) but also, since the
ogos reacts to the Twelve Cosmic Rays, these later Swarms are cha
acterised by the influence of the Rays predominant at the
ime they received the Logoidal impulse to go forth. Therefore t
e great phases of evolution between the sending forth of fre
h Swarms are governed by the influences from the Twelve Cosmic
ays. This has reference to the “ Houses “ of the Cosmic Zodiac an
to the precession of the Equinoxes. Those who energise
hese phases and typify them are Ray Exemplars; they stand, so to
peak, between the Zodiac and the phases and reflect the Zodiacal
nfluences, acting in a sense as Cosmic mediators. The
e influences then act upon the Planetary Beings.(13) There are
two of
the
ncient god-forms which can be called easily to mind as being
eadily alignable with the Essential Self, most other god-for
s being representative of particular aspects, Cosmic or universa
. These two god-forms are Horus and Eros. Of them the former coul
stand for the Divine Spark, the latter for the seed-atom.
or all practical purposes we could say they ,stand for th
outer and inner aspects of the seed-atom respectively. This supe
nal Eros is far removed from the popular conception which ident
fies him with Cupid. He represents he
e the essence of Man which is Eros plus Anteros and spring
from the Cosmic Egg like the philosophic concept of that Eros w
o was one of the -earliest of the Greek gods. This cosmogo
ic Eros was the earliest force bringing order out of Chaos
and he presided at the Council of the Gods and rules over the mi
ds of gods and men: he was ,one of the gods of the Samothra
ian Mysteries.(14) The star Sirius has always been held in e
oteric teaching to have much influence on Solar evolution
Astronomically speaking, of course, the position in space of Sir
us is far outside the solar system but from a Cosmic sta
dpoint Sirius and many other stars ,„condition” the Solar Logos a
d, since the Solar Logos is Itself Conditioner of a
d conditioned by Its universe, the influences of Sirius and o
her stars are transmuted correspondingly before being ,commun
cated to the universe. Therefore, in the purely esoteric sens
, stars in general and Sirius in particular (because of its spec
al influence) can be considered in relation to Solar evolution-m
re ,especially those which, like Sirius, have had a marked ef
ect on it. The individual, however, must have completed the cyc
e of Solar -development before he can experience the pure
nfluence of Sirius or other stars.(15) Orthodox s6ence studies
he materials of which the body of the earth is made and their com

osition, but the "deeps" of the Inner Earth, the make-up of the Planetary Being is what is most important to esoteric studies. It can be helpful to think of the earth rather as planet, a globe in the Solar system than as "the world" and a development brought about by many civilisations to one of which we now belong. That which sustained and nurtured those civilisations is the Planetary Being. This tremendous force is sometimes personified as "The Earth Mother," but, personification or no, all should be aware of the gigantic force involved and of how they are beholden to it. The Archangelic Guide assigned to the Planetary Being might be considered to supply higher aspects to it corresponding to the "Intellectual Principle" in man. The names of these Archangelic Guides as known traditionally can be found in standard works of reference such as The Mystical Qabalah.⁽¹⁶⁾ Each planet has within it the principles of a universe (as indeed has the atom) so that the Group soul of the planet's life comes through in aspects somewhat analogous to the Three Aspects of the Logos. There is something of the Aspect of "Love," of "Wisdom" and - of "Power" in each planet. Planets have had their "Leaders" who have shown forth certain principles by their conditions of life even as there have been Teachers who did this for the guidance of mankind. These planetary aspects affected certain sections of the human race for they affected the Life-Swarms as they came down. Thus according to the aspects prevalent on certain planets which were in contact with man as he then was so did a particular Swarm receive a conditioning. These great "stresses of planetary substance" have much influence both in their own sphere and on the Earth because when the Earth was, so to speak, beginning its course in the heavens various influences and substances from different planets penetrated the then empty and uncoordinated mass which became the Earth: these stresses have left their mark on the Earth's structure and innermost nature and account sometimes for disturbances of one kind or another-earthquakes, for example, for there is still a link between certain substances in the Earth and the corresponding substance in some other planet and the two activate each other and reactions are set up in both. That is largely the basis of the more accurate side of astrology, but it is too intricate and too remote for most today to study deeply or use as a basis of assessment. In very early days the most advanced among the priesthood knew about the stellar and planetary "stresses" and the Earth's magnetism and on that knowledge built a system of which, indeed, something remains though the bases of the system have been forgotten. There are people on the Earth whose psychic faculty can be stirred by such stresses; some people, for example, are sensitive to earthquakes or atmospheric pressures in a way others are not. Such people have in their inner make-up some of the stresses corresponding to those of the particular planet which is disturbing the Earth. Certain planets influence the "Water" "Fire", "Air" and "Earth" conditions of the Earth by acting on the Earth's aura. The underlying principle is that of the uni-

y of all. The Earth is not unique; it should be considered for what it is - one of the bodies in the Solar System which has passed through states and conditions which have gradually condensed into what we call the "Earth" but which have passed down from the Moon, Venus, Saturn and other planets. The Planetary Beings can be considered in one way as the Group Souls of the planets and may be given by the visual imagination a definite form - as indeed in ancient days was done. Out of these Planetary Beings as they affected the mind and character of man were later evolved by vision and imagination into astral forms the forces known to mythology. There is, therefore, a strong link between Planetary Beings and the appropriate god-forms as is studied by some even today. At the end of evolutions planets change over and different planets go into action during the succeeding evolution so that the subject of astrology at the present day has to contend with difficulties that are practically insurmountable. There is much to be learnt about the Life-Swarms and the way in which their coming down affects humanity generally in the present. All those ancient happenings and developments must be included in any estimation of the condition of man and his development. During the various historical periods certain Planetary Forces - for Planetary Forces is a more accurate description than "Planets" - influenced the Earth, each according to its special nature; when these Forces are brought to bear again in their turn they bring to the surface conditions corresponding to their nature, they bring them about in the Earth. Although we have used the term "Planetary Forces" we include also certain Stellar Forces working through the Solar jurisdiction, such as the Signs of the Zodiac, but that subject is too vast to be dealt with in detail now. Bear in mind, however, the Sign of Gemini, for the Forces signified by that Sign influenced Atlantis and will influence Earth again later in the present age. The stars are set in configurations somewhat similar to those which influenced the last days of Atlantis: certain major Planetary Forces and Signs are influencing mankind again and though the combinations are different here is something of the same kind of inner condition: the combinations are different but there is something of a similar inner condition and the world, though not deluged by a water cataclysm, is full of clashes and strife of various kinds. (17) Let us consider the Second Swarm, the life-wave of those great Regents of the Logos we call the "Lords of Form." They might also be called the "Builders" for through them all form, all shape is developed. The shape that covers or encases the life-consciousness is made by the Builders to hold that life for time sufficient for the life to react as needed to the stresses of the Sphere on which it is after which the life withdraws to another condition leaving the form to decompose into the elements of the Sphere. This is one of the ear

iest conceptions of "death," so that the Lords of Form are also the "Gods of Death." Where there is death on a large scale, especially death on a group scale as in war, the Lords of Form are intimately concerned for then the whole planet is as it were shaken and its planetary forces need reconstruction. The Lords of Form work with group souls more than with individuals but where a great teacher is instructing mankind (especially if the teaching concerns human evolution) the Lords of Form are at work adapting the "planetary matter" to the new and greater concept of life and evolution being brought through. When The Christ using the body of Jesus of Nazareth, strongly influenced the planet Earth there were very definite though perhaps incalculable changes in the actual lines of the Earth: these were not observable by science perhaps but the Logoidal Forces changed to another course so to speak and the inner forces behind the outer manifestation of the Earth - the etheric structure - began to alter. Form is not confined to outline but is essentially the whole shape and fills the need of Life for a particular shape: the shape does not appear all at once but grows and develops in the course of evolution, as indeed does the life. The actual outlines or configurations of Cosmic form such as the stars, planets, and large land masses are all influenced by the Lords of Form. The ancients were aware of these very early beings (the Lords of Form) and their powers, recognizing them as gigantic Forces much connected with fire and metallic ores and paying homage to them in some of the earliest Mysteries. These Lords are behind the great chemical (and alchemical) fires. They construct shape by means of mingling and uniting the Elemental powers and the metallic and mineral forces of the Earth - building structure of every kind especially planetary structures for they it was who built the planets. You will notice that the larger and vaster forms are always the simplest - the great spherical forms are the simplest but smaller types increase in complexity, a comparison of the huge prehistoric animals with the present-day fauna will show. The "outer" structure of a planet is indeed simple. The Lords of Form may also be called the "Lords of Rhythm" (just as the Lords of Flame may be called the "Lords of Vibration") because of their rhythmical advance and retreat in the building of the universe. That was the beginning of rhythm in the universe and it set the great rhythms "Death" and "Birth." Thus can these Lords be called the "Lords of Death" and they are deeply connected with the Ring-Chaos; they have the great driving force of reaction that will finally break up a form and release the force. They are at work behind the construction of mineral forms for these are after-development of the form of the Earth and the life of the planet is within the mineral in a certain way. All the ancient legends of the great Powers of the Underworld - the chthonic Forces of Hammer and Anvil, the hammering into shape of great streams of force, the Blacksmith Gods, deal with the Builders and lesser types of Elemental beings concerned

pe as we know it was established by the middle period of the seventh Swarm and the Archetypal forms were due in a sense to the projected concept of the Planetary Being itself which brings through additional concepts of another type than the Logoidal concepts though not necessarily conflicting with those concepts. (8) The three "activities" referred to in Chapter 3 as "Movement", "Light" and "Sound" may be aligned with the three Sephiroth of the "Tree of Life." The numbers assigned to the Sephiroth are connected with the numbers of the corresponding atoms (i.e. of the facets). For example

the terrible simplicity of the three-sided atom and the use of three in Binah symbols are obviously related. The

four Threes of the Tarot cards have the same basis. Both the "Tree of Life" and the Tarot will be found to be in line with the tenets of the "Cosmic Doctrine" if the seeker meditates seriously on the subjects.

(9)

The "Divine Sparks" and the Great Entity that is the Logos of our system have a common origin in their Prime (Cosmic) Atoms which derive from the Great Unmanifest. These Prime Atoms of a Divine Spark before that Spark comes under the Logoidal influence can be called the "Seed Atoms."*

* This "Seed Atom" refers to the Cosmos and its difference from the "seed atom" mentioned at the end of Chapter XII is plain.

There is a continuity of development from the Prime Atom formed as described in the early chapters to the Divine Spark in each one of us. Just as the Great Entity has evolved from the ten-sided, or travelling, atom of the Cosmos (which itself evolved from the Prime Atom) so have the Divine Sparks evolved from certain of the less complex atoms brought into the wake of the Travelling Atom, or Great Entity, out of whose concepts the Great Entity has created and projected its universe.

The difference at this point between a Great Entity and a Divine Spark is one of degree but not one of kind for the Great Entity has experience of all the Rays but the Divine Spark has experience of only one Ray-both have experience of all the Planes.

Certain of the atoms "brought over" from the Cosmos to the Universe by the work of the Great Entity became the Travelling Atoms of the Universe. They are not as complex as the Great Entity but are too complex to settle down upon a plane of manifestation and they return to the centre.

These atoms "brought over" by the Great Entity, which become the Divine Sparks are those which in their journeying to the Centre have their "track in space" impressed with the Logoidal Image and Influence. Thereafter these Divine Sparks became conditioned by the Logoidal Consciousness until the cycle is completed and they became "freed" from this influence and return to their original nucleus of being as Seed Atoms.

There are, therefore, two ways of considering the Divine Spark. You may look at it from the point of view of the Cosmos or from the point of view of Solar Logoidal evolution: but, in reality the Divine Spark is one thing having its origin in the Unmanifest from which it derives its existence and energy.

The Divine Spark does not derive from the Solar Logos but is conditioned by the evolution of the Solar Logos until the cycle of its Solar development is completed. This takes place when the Individuality, as a result of certain evolutionary processes in the Solar Logoidal jurisdiction comes to the point where it need no longer stay in that jurisdiction but is able to recognize its own true being. At that point it is as though the "outer" development of the Divine Spark drops away from it and it becomes again purely a seed-atom to which the Individuality thenceforward owes its allegiance. Thus at that stage the Divine Spark, being freed from the limiting influences of Solar evolution gives rise to that state of perfect freedom within the Individuality, the state of spaceless and timeless existence - consciousness.

The great responsibility that then devolves upon the Individuality on the "Right-Hand Path" comes from that Individuality's now established contact with pure and limitless "energy." The Individuality is conditioned only by its degree of realisation of this contact as it enters on a phase of creative activity; in very truth a god.

Advanced initiations are concerned with the degrees of contact of the Individuality with the inner aspect of the Divine Spark (the seed-atom) and the realisations thereof. The cycle of Solar development is governed by the "Lords of Karma" and it includes the working out of the "tracks in space" left by the "karma" when the karma has itself been worked out, for the Solar development occurs after the "track in space" (of the seed-atom) has received the Logoidal Imprint. Thus until the completion of the Solar development the Individuality is not able to bring through pure power without some of the power being diverted to its own needs.

There is, of course, a wide range of gradation between the earlier and later phases but, broadly speaking, the earlier are essentially concerned with the gradual bringing of the Individuality (after preliminary work on the Personality) into contact with its own true being - the seed-atom - whereas the later are the true creative work of those who have achieved in cooperation with their brethren. The preliminary work on the Personality has to be thoroughly carried out before these phases are entered upon.

(10)

The "inanimate atoms" and the Divine Sparks have a common origin in the Great Unmanifest. They have both been "brought over" by the Great Entity which is our Solar Logos and from the aggregate of their conceptions of their own images the Great Entity has projected Its universe. Everything that has "life" in the universe derives that life from its own seed-atom. It is the aim of the Solar evolution to unite eventually the atoms of its universe with their seed-atoms in the Cosmos.

It has been stated that there is a difference of degree but not of kind between the travelling atoms of a universe and that universe's Logos: similarly there is a difference of degree but not of kind between a travelling atom and an inanimate atom.

Only the more evolved of the Cosmic atoms brought over by the Great Entity became travelling atoms in Its universe at the beginning of the Solar evolution and received the Logoidal Impress on their "tracks in space." These - not including the First Three Swarms - which are different-relate to the human evolution and among them are differences in degree of development caused by factors inherent in their make-up.

The inanimate atoms are less evolved than the travelling atoms and receive the Logoidal Impress during the Solar evolution according to their degree of development because being in and of the Solar universe (their concepts having been used to create it) they are continually being bathed in the Logoidal influences and slowly absorb them. In this way we get the Oversouls of plant and animal life, these Oversouls deriving from the inanimate atoms, which are gradually acquiring a Logoidal Impress.

(11)

The basic "sound" of a human being is implicit in the development of a Divine Spark. The Logoidal Impress can be more accurately conceived of as a sound-vibration than a picture concept. This idea of primal or basic sound was behind the ancient teachings of number and numerical values. Sound implies rhythm and vibration. That "Aspect" of the Trinity of the Logos known as the Love-Aspect is the part chiefly at work in the imprinting of the Impress. The higher teaching of the Churches is inspired by this.

(12)

The three Primary Swarms were projected into manifestation each under an impulse from one of the Prime Aspects of the Logos derived from one of the Primary Rings. These Primary Swarms, are set apart from the succeeding Swarms and are of a different degree. The Swarms that followed them developed under the influence of the Logos plus the Three Primary Swarms, the Lords of Flame, Form and Mind. They are, therefore, under the influence of the three Cosmic Rings (as were the three Primary Swarms) but also, since the Logos reacts to the Twelve Cosmic Rays, these later

Swarms are characterised by the influence of the Rays predominant at the time they received the Logoidal impulse to go forth.

Therefore the great phases of evolution between the sending forth of fresh Swarms are governed by the influences from the Twelve Cosmic Rays. This has reference to the " Houses " of the Cosmic Zodiac and to the precession of the Equinoxes.

Those who energise these phases and typify them are Ray Exemplars; they stand, so to speak, between the Zodiac and the phases and reflect the Zodiacal influences, acting in a sense as Cosmic mediators. These influences then act upon the Planetary Beings.

(13)

There are two of the ancient god-forms which can be called easily to mind as being readily alignable with the Essential Self, most other god-forms being representative of particular aspects, Cosmic or universal. These two god-forms are Horus and Eros. Of them the former could stand for the Divine Spark, the latter for the seed-atom. For all practical purposes we could say they stand for the outer and inner aspects of the seed-atom respectively. This supernal Eros is far removed from the popular conception which identifies him with Cupid. He represents here the essence of Man which is Eros plus Anteros and springs from the Cosmic Egg like the philosophic concept of that Eros who was one of the -earliest of the Greek gods. This cosmogonic Eros was the earliest force bringing order out of Chaos and he presided at the Council of the Gods and rules over the minds of gods and men: he was one of the gods of the Samothracian Mysteries.

(14)

The star Sirius has always been held in esoteric teaching to have much influence on Solar evolution. Astronomically speaking, of course, the position in space of Sirius is far outside the solar system but from a Cosmic standpoint Sirius and many other stars „condition” the Solar Logos and, since the Solar Logos is Itself Conditioner of and conditioned by Its universe, the influences of Sirius and other stars are transmuted correspondingly before being ,communicated to the universe.

Therefore, in the purely esoteric sense, stars in general and Sirius in particular (because of its special influence) can be considered in relation to Solar evolution-more ,especially those which, like Sirius, have had a marked effect on it. The individual, however, must have completed the cycle of Solar -development before he can experience the pure influence of Sirius or other stars.

(15)

Orthodox science studies the materials of which the body of the earth is made and their composition, but the " deeps " of the Inner Earth, the make-up of the Planetary Being is what is most important to esoteric studies. It can be helpful to think of the earth rather as a planet, a globe in the Solar system than as " the world " and a development brought about by many civilisations to one of which we now belong. That which sustained and nurtured those civilisations is the Planetary Being. This tremendous force is sometimes personalised as "The Earth Mother," but, personalisation or no, all should be aware of the gigantic force involved and of how they are beholden to it. The Archangelic Guide assigned to the Planetary Being might be considered to supply higher aspects to it corresponding to the " Intellectual Principle " in man. The names of these Archangelic Guides as known traditionally can be found in standard works of reference such as The Mystical Qabalah.

(16)

Each planet has within it the principles of a universe (as indeed has the atom) so that the Group soul of the planet's life comes through in aspects somewhat analogous to the Three Aspects of the Logos. There is something of the Aspect of " Love, " of " Wisdom " and - of " Power " in each planet. Planets have had their " Leaders " who have shown forth certain principles by their conditions of life even as there have been Teachers who did this for the guidance of mankind. These planetary aspects affected certain sections of the human race for they affected the Life-Swarms as they came down. Thus according to the aspects prevalent on certain planets which were in contact with man as he then was so did a particular Swarm receive a conditioning.

These great " stresses of planetary substance " have much influence both in their own sphere and on the Earth because when the Earth was, so to speak, beginning its course in the heavens various influences and substances from different planets penetrated the then empty and uncoordinated mass

which became the Earth: these stresses have left their mark on the Earth's structure and innermost nature and account sometimes for disturbances of one kind or another-earthquakes, for example, for there is still a link between certain substances in the Earth and the corresponding substance in some other planet and the two activate each other and reactions are set up in both.

That is largely the basis of the more accurate side of astrology, but it is too intricate and too remote for most today to study deeply or use as a basis of assessment.

In very early days the most advanced among the priesthood knew about the stellar and planetary "stresses" and the Earth's magnetism and on that knowledge built a system of which, indeed, something remains though the bases of the system have been forgotten. There are People on the Earth whose psychic faculty can be stirred by such stresses; some people, for example, are sensitive to earthquakes or atmospheric pressures in a way others are not. Such people have in their inner make-up some of the stresses corresponding to those of the particular planet which is disturbing the Earth. Certain planets influence the "Water", "Fire", "Air" and "Earth" conditions of the Earth by acting on the Earth's aura.

The underlying principle is that of the unity of all. The Earth is not unique; it should be considered for what it is - one of the bodies in the Solar System which has passed through states and conditions which have gradually condensed into what we call the "Earth" but which have passed down from the Moon, Venus, Saturn and other planets.

The Planetary Beings can be considered in one way as the Group Souls of the planets and may be given by the visual imagination a definite form - as indeed in ancient days was done. Out of these Planetary Beings as they affected the mind and character of man were later evolved by vision and imagination into astral forms the forces known to mythology. There is, therefore, a strong link between Planetary Beings and the appropriate god-forms as is studied by some even today.

At the end of evolutions planets change over and different planets go into action during the succeeding evolution so that the subject of astrology at the present day has to contend with difficulties that are practically insurmountable.

There is much to be learnt about the Life-Swarms and the way in which their coming down affects humanity generally in the present. All those ancient happenings and developments must be included in any estimation of the condition of man and his development. During the various historical periods certain Planetary Forces-for Planetary Forces is a more accurate description than "Planets"-influenced the Earth, each according to its special nature; when these Forces are brought to bear again in their turn they bring to the surface conditions corresponding to their nature, they bring them about in the Earth. Although we have used the term "Planetary Forces" we include also certain Stellar Forces working through the Solar jurisdiction, such as the Signs of the Zodiac, but that subject is too vast to be dealt with in detail now. Bear in mind, however, the Sign of Gemini, for the Forces signified by that Sign influenced Atlantis and will influence Earth again later in the present age. The stars are set in configurations somewhat similar to those which influenced the last days of Atlantis: certain major Planetary Forces and Signs are influencing mankind again and though the combinations are different there is something of the same kind of inner condition: the combinations are different but there is something of a similar inner condition and the world, though not deluged by a water cataclysm, is full of clashes and strife of various kinds.

Let us consider the Second Swarm, the life-wave of those great Regents of the Logos we call the "Lords of Form." They might also be called the "Builders" for through them all form, all shape is developed. The shape that covers or encases the life consciousness is made by the Builders to hold that life for a time sufficient for the life to react as needed to the stresses of the Sphere on which it is after which the life withdraws to another condition leaving the form to decompose into the elements of the Sphere. This is one of the earliest conceptions of "death," so that the Lords of Form are also the "Gods of Death." Where there is death on a large scale, especially death on a group scale as in war, the Lords of Form are intimately concerned for then the whole planet is at it were shaken and its planetary forces need reconstruction. The Lords of Form work with group souls more than with individuals but where a great teacher is instructing mankind (especially if the teaching concerns

human evolution) the Lords of Form are at work adapting the “ planetary matter “ to the new and greater concept of life and evolution being brought through. When The Christ using the body of Jesus of Nazareth, strongly influenced the planet Earth there were very definite though perhaps incalculable changes in the actual lines of the Earth: these were not observable by science perhaps but the Logoidal Forces changed to another course so to speak and the inner forces behind the outer manifestation of the Earth - the etheric structure - began to alter. Form is not confined to outline but is essentially the whole shape and fills the need of Life for a particular shape: the shape does not appear all at once but grows and develops in the course of evolution, as indeed does the life. The actual outlines or configurations of Cosmic form such as the stars, planets, and large land masses are all influenced by the Lords of Form. The ancients were aware of these very early beings (the Lords of Form) and their powers, recognizing them as great Titanic Forces much connected with fire and metallic ores and paying homage to them in some of the earliest Mysteries. These Lords are behind the great chemical (and alchemical) fires. They construct shape by means of mingling and uniting the Elemental Powers and the metallic and mineral forces of the Earth -building structures of every kind especially planetary structures for they it was who built the planets. You will notice that the larger and vaster forms are always the simplest-the great spherical forms are the simplest but smaller types increase in complexity, a comparison of the huge prehistoric animals with the present-day fauna will show. The ” outer “ structure of a planet is indeed simple.

The Lords of Form may also be called the ”Lords of Rhythm “ (just as the Lords of Flame may be called the ” Lords of Vibration “) because of their rhythmical advance and retreat in the building of the universe. That was the beginning of rhythm in the universe and it set the great rhythms ” Death “ and “ Birth.” Thus can these Lords be called the ” Lords of Death “ and they are deeply connected with the Ring-Chaos; they have the great driving force of reaction that will finally break up a form and release the force. They are at work behind the construction of mineral forms for these are after-developments of the form of the Earth and the life of the planet is within the mineral in a certain way.

All the ancient legends of the great Powers of the Underworld -the chthonic Forces of Hammer and Anvil, the hammering into shape of great streams of force, the Blacksmith Gods, deal with the Builders and lesser types of Elemental beings concerned with work as servants of the Lords of Form. In a properly worked ritual the Elemental beings build certain forms on the astral which hold together the stresses of force until other forces take over: rhythm or repetition is important here for the frequent building of the forms eventually makes it as near “ solid “ as is possible on the astral plane. Just as the efficient and “ contacted “ occultist makes use of the service and cooperation of these Builders so, on a much larger scale, did the Logos use the powers of the Lords of Form to construct not only the Earth but also the other planets of Its system. All the solar system is interlinked and reflections of the attributes of other planets will be seen-within certain mineral forms of the Earth - certain precious stones, for instance, are very closely connected with other planets and this connection is not based only on superstition. Similarly certain metals have a composition which links them to certain basic outlines and substances of other planets giving not only an analogy with them but also a certain definite linking.

An imaginative picture of these great Lords of Form could be made by visualising a vast amphitheatre under the earth in darkness filled with red flashes from the depths of inner earth. Through this darkness can be heard a hammer on an anvil-very faintly at first for it is very remote. Imagine this sound as coming gradually nearer with a tremendous rhythm, hard, strong, simple. A’s that rhythmic sound increases in intensity giant forms gradually begin to build in outline-vast forms dimly and only partly seen in outline for they are too huge and too strong to be contained in space as we know it; feel the etheric intensification “ behind “ the dimly discerned form.

Within this work which is being done by the Lords of Form is a vast patience which is content to take millions of years over the task it has set itself so that it can be perfectly done.

Every time the Great Worker returns to a task he brings a new power derived from the Logos and from the Sphere in which he accomplished his last work, and this new power gives a somewhat

changed type of force to the work. And ever the great hammer beats and beats and beats through Time - building, unbuilding and building again: such are the great Regents of the Logos entrusted with this work.

These Regents are also the servers of the Aspect of the Logos behind death, and regeneration and rebuilding. We can invoke the Lords of Form to help us to earn our freedom from form when the time approaches. He who knows and understands death has already overcome it-he is a pupil of the Lords of Form. We would do well to give a thought to the great Builders who have built us and the planetary spheres and who are behind the laws of shape whether on the astral or physical plane, with whom we can cooperate as agents of the Divine.

(18)

In The Mystical Qabalah there are references to the Archangels of the Ten Holy Sephiroth. These are the “Intelligences of the Spheres and are of the First Swarm-Lords of Flame. That Intelligence works with the archetypal force of the Sphere and under its control are the “Angels of the Sphere” which execute the wishes of the Archangels according to their natures.

The Sphere of Malkuth comprises the mundane plane and the spiritual values which are immediately within dense matter - in fact the “Spirit of the Atom and it is under the aegis of the Lord of the Four Elements we call Sandalphon. This Archangel is one to be invoked by those especially who find difficulty in coming to grips with the physical plane, for it is he who has charge of the “soul” of physical objects. If you could see with your physical vision the exact inner plane condition of a chair or a table you would observe a very slow vibration and movement of infinite numbers of tiny ” molecules “ holding together the dense matter. Sandalphon is the Overlord of all these activities. Those who are so inclined can visualise a great angelic form in the four Qabalistic colours of Malkuth-pale yellow, olive green, russet and black; his vibratory rate is slow and somewhat ponderous for it belongs to the plane of dense matter and the connecting link of etheric just behind that plane.

The Sphere of Yesod concerns among other things the deeper and remoter etheric substance - the Akasha as it is sometimes called - and here the Archangel is that known as Gabriel, ruler of many subtle realms in nature and in man. He is the Lord of Dreams and of the subtle vibrations of a rare kind which can touch the clairvoyant faculties of man. In Christianity he is associated with the Annunciation partly because he is ” The Mystic Announcer “- the controller of a special kind of message which can reach to the human mind from far-off planes; he is, in fact, the Angel of Annunciation to many others than Mary. Thus he is also concerned with sleep-that condition in which the dense body is inactive and the subtle vehicles can escape from it to other planes. It is a large part of his work to induce what is a part of “the Moon Consciousness” in man; he tends to draw the soul magnetically even as a great water power draws and therefore his influence is a kind of sedative on the physical power - he draws the consciousness from it. He may be pictured as a huge ovoid of silvery substance with the delicate lilac and violet of Yesod in his “ wings “ and the sound of mighty waters which show his special type of vibration.

The Sphere of Tiphareth is presided over by the Archangel Raphael. He holds the healing and sustaining powers of sunlight - especially is he concerned with the modern methods of radiant heat and infra-red and ultra-violet rays, though these are as yet from the esoteric standpoint only in their infancy.

Finally, there is the Sphere of Kether whose Archangel is Metatron. He is said to have been responsible for the glyph of the Tree of Life’s being given to man. He works in the great world of Cosmic Archetypes, and his influence is very rare. It is of the type that comes as a blinding flash of illumination of remote spiritual truths. Thus far we have dealt with the Sephiroth on the Middle Pillar of the composite glyph of the Tree of Life and the Pillars. Let us now consider the Sephiroth on the two Side Pillars.

The Archangel of the Sphere of Chokmah is Ratziel - He brought through the creative forces in early evolution. It is difficult to formulate in the human mind such beings as either Metatron (of Kether) or Ratziel, for they are beyond form as we know it and are incapable of being ”reduced” to a symbol in any way adequate save perhaps that of great ”Pillars of Glory” with no fixed

outlines.

The Archangel of the Sphere of Binah - Tzaphkiel - has been behind the formulation of all the mystic cults that have been sent down from time to time by the Inner Plane Adepts. He is the "Archangel of the Temple" and can be envisaged as a vast Presence shining with a certain living darkness with a rose-coloured glow in the centre.

The Archangel of Chesed - Tzadkiel - has a great influence giving an assurance of benevolence and the utter calm of eternal security and certainty. He could be of great help to any who are prone to irritation or unbalance of temper.

The Archangel of Geburah - Khamael - is the Protector of the weak and wronged; he is also the Avenging Angel who punishes the breakers of Law.

The Archangel of Netzach - Haniel, - is the Archangel of the Sphere of harmony and beauty, and especially of inter-relationships whether of Spheres, planets, plants or animal and human life: the great archetype of sympathetic vibration. He can be visualised as shining with a green and golden flame with a rose-coloured light over his head.

The Archangel of Hod is Michael - Hod is the Sphere of the "magic" and Michael is its Archangel because he holds in control the various evil influences which might escape into the world of men. He is thus a very essential protector in "magical formulae" - especially where the would-be practitioners are inexperienced.

The ancient Jews listed whole choirs of angels by name in addition to the great beings here enumerated, and to deal with them would require much time; but you have some indications about ten so great that they are - each in his own Sphere - in charge of the mighty Emanations of God. Many who "work the Tree" are inclined to get in touch with the God-Forces of the Sephiroth (using the god-forms of varying pantheons) whereas, in fact, there are certain archetypal powers of these Spheres that forms of varying Pantheons) where, in Sephiroth that are better brought through by use of the Archangelic powers and forms.

(19)

The teaching on the Ray Exemplars - especially contained in Chapter XX - is of great importance and should be carefully meditated upon. The teaching has been given in a very condensed form - largely owing to the abstruse and difficult nature of the subject which made it very difficult to put the ideas into adequate expression in language. A good way to obtain an understanding is to think of the great Teachers and Redeemers of mankind who have guided the various phases of evolution in all conditions - both Cosmic and mundane.

Think of the mighty influences and "conditions" that pour through the great currents of force marked by the Zodiacs - the Greater Zodiac of the Rays, and the better - known Lesser Zodiac. In these great currents work various types of the Redemptive Force of the Logos, or, to use a more Cosmic phrase, the great Cosmic Force fuses in a special way on a special occasion with what might be called the central aspect of the Logos in order the better to influence evolution. As the different types of this great Force touch our own evolution they give off to each one a definite influence - they act as nourishers, helpers, feeders of that particular Divine Spark. So it has always been in every phase of our evolution.

The Being of whom we know most is he who is sometimes called "The Lord of the Purple Ray." He is, so to speak, the "group-mind" of that Ray - a great group-mind which is at the super-phase in which it leads on our evolution to its conclusion. The tremendous force of which I speak - the "Anointed Force" of the Purple Ray - has focused to some extent from time to time in some great Guide or Leader who has come down into the world of men, but the Lord of the Purple Ray is, of course, unique.

The intricacy of the subject makes it nearly impossible to give a clear exposition in words alone; words should be combined with deep contemplation and concentration rather than with only intellectual meditation to gain some beginning of understanding which will continue to grow. The names and attributes traditionally given to the Ray Exemplars are of high importance, not only because they give some idea of the Being through whom the force focused in this world, but because they can put you in touch with a Cosmic power which exceeds the force of the Ray

shown when their bearers were in the world. There is, naturally, a difference. between the “ Cosmic Christ “ and the Force of the Cosmic Christ focused in an individual, but the latter proceeds from the former and could not manifest without it.

The forces of the Ray Exemplars are very strong and very deep.

It can be of great value to link them mentally with those more abstract aspects of the individual called variously in esotericism the “ Higher Self “ or the Individuality.

It is possible in suitably prepared conditions for this great Force to be contacted in ritual but great care is needed as it can have a destructive effect in “ burning up the dross “ if it is brought too near the earth-plane. Normally in ritualistic conditions it acts - to use the symbolism of the Qabalistic Tree of Life - from the Supernal Triangle through Tiphareth and does not come “ below “ that Sefirah but on occasion it may work through to the astral and etheric levels using a group of people as a basis of manifestation and bringing about repercussions whereby all in that group would be affected since none could be in contact with such a Force and remain unaffected. The great ”Ray” impinges on the Higher Self in such a manner as to impel it towards integration with the Personality, and everyone save those whose integration was well advanced would feel strong effects which might well be beyond their capacity at that stage to support. When this “ Ray “ is brought through the Personality has to absorb in a way the experience of the Higher Self even as the Higher Self has to absorb the experiences of the Personality after physical death. This power of the Cosmic Christ can be thought of as that of the higher planes of ”the Sun-behind-the-sun” which so to speak unites the Ray with the Logos. The time has now come when the great Force as a whole will no longer focus in a single being but in a group - ever widening until it takes in the whole world. The inner plane ”body” now used by the Force can be thought of as something like the highest esoteric conception of Horus. Nevertheless the beings in whom the Force once manifested individually still work in remote planes and maintain in the Cosmos the distinctive power with which they once worked on earth.

It is sometimes liable to cause confusion if a ”Ray” is associated with a special colour. The ” Ray ” of the Cosmic Christ is that of the Oversoul of the Lords of Mind. It works through the precessional Signs of the Zodiac and contains within itself a whole spectrum or a set of strata of colours of which strata the so-called “Purple Ray” is a stratum. The Green Ray or green stratum of the same great Ray worked through the force described in the legends of Osiris, Orpheus and Dionysos. It is the true Ray -of Mind and leads to the innermost sanctuaries of the “ Mysteries.”

(20)

Man’s primal loyalty is to the One-Unity. “Loyalty” is hardly the correct word to use as the One is a Law-no other type of existence is possible; in It we live and move and have our being. It is, however, very necessary to understand that the One - the Logos - is actually the becoming manifest of the Unmanifest; It is Unity not because It is concentrated or limited but because It is undifferentiated.

The nucleus of the being of each immortal soul is a “nucleus of energy” in the Unmanifest. The Logos provides the ordered substance of manifestation on all planes whence we build up the vehicles of manifestation on each plane. Therefore is our manifested existence conditioned thereby, the Logoidal nature being the law of existence to which we must submit if we would live harmoniously in manifestation. The nucleus of each living soul does not derive its existence from the Logoidal Being but from the Unmanifest Itself. However, as man manifests forth in the sphere of the Solar Logos man must work in and through its conditions which are the laws of the Logoidal nature. The Solar Logos is the God of the Solar System and gives it its laws; this Logos, working through the Planetary Beings and their Archangelic Guides is the source of the differentiated energy manifesting within the bounds of the solar nebula. In brief, the Solar Logos is the Conditioner and Sustainer of manifestation in Its universe: the Great Unmanifest is unconditioned.

(21)

There are three titles which might be confusing unless a clear idea of the way in which they are used has been gained. They are (1) the Planetary Entity, (2) the Planetary Intelligence or the Archangelic Intelligence, (3) the Planetary Being.

The Planetary Entity is the Logoidal Idea of the “ planet “ as it is to become in its spiritual sense at the end of evolution.

The concept of this has many symbolic descriptions, such as “The Kingdom The New Jerusalem,” etc.

The Planetary Intelligence or the Archangelic Intelligence is the Archangel appointed to guide the ”planet” during its evolution; that Archangel is one of the First Swarm. That assigned to earth is known in the West as Sandalphon. He is said to have first come into close control of earth during the Lemurian Period when Fire was in a particular manner being introduced into earth. This Archangel, great as he is, is said to be not quite of the stature of the Planetary Intelligence of Venus or Mercury; from our present viewpoint, however, his greatness is such that the distinction to us is largely academic. He, too, is developing and reaching out, so to speak, towards another great Force- and this concept is indicated in certain esoteric allegories dealing with the symbolism of marriages. From time to time great entities from other and more developed ”planets” have been in touch with Sandalphon’s planetary work, especially from the planet Venus.

The Planetary Being is as it were a vast Elemental composed of the consciousness (using the word in a wide sense) of each one of its children-the children being all the lives upon the earth, humans, beasts, birds, reptiles, fish, insects, etc. In the great Elemental, the Planetary Being, all these are, or should be, one:and so they are, or should be, one in their relationship to each other; it is because that relationship has been shaken, broken and betrayed that so many ills have come to pass. It can be assumed that when “the Kingdom comes,” when the Logoidal Idea of this planet is truly manifested then indeed all earth-creatures will be one on a certain level.

All should remember that as developed and developing human beings they have a great debt to the earth who is in very truth their mother, their parent; they are made of her substance and live upon her substance and all that they do here on earth, all that they discover in science, all that they make in art or industry are also parts of her. But she develops less quickly than her children and it is the duty of the children by their development to aid hers. Therefore, whatsoever you do let it be not only for your own gain or interest but also for the gain and keen interest of the Planetary Being. The more that you do that is consciously shared with this vast Elemental parent the more will those things prosper not only in her but in you. There is no thing on earth, no thought brought through to earth which does not concern the Planetary Being - however great or lofty, however (unfortunately) mean or base. You have a very great responsibility not only to yourselves and to each other but also to the great group-soul of the earth, the great mass-mother of you all.

The more you are in touch with her the more will you earn the privilege of the contact with her Guiding Intelligence and that Intelligence will guide you not only in matters immediately concerning the earth-life but in using such things to pave the way for the future towards the time when the Planetary Being will become one with the Planetary Entity. Therefore, help to join these two together-the Logoidal Concept of the earth (which even if you cannot clearly envisage it you can to some extent imagine) and the Planetary Being; and let that purpose unite with your wish to forward evolution and your effort to pass on all that you can of help to the earth-mother. As all of you develop through the Ages so do you carry this vast parent and her development along with you. When you stray from the right path so do you lead her astray and this is a grievous wrong for it holds the degradation of the Planetary Being.

Be mindful, too, in thinking of the Planetary Being to think also of all other stages of life upon her - birds, beasts, insects, Elementals and all forms of life for to these do you bear relationship. There has been much superstition and sentimentality connected with this Divine Law of Unity but keep well in mind the great truth of the interrelationship of all when you shed the superstition.

Be aware of the Planetary Being as a being of immense age in which each one of you is as it were embedded and through which you draw your earth-life; it could be compared to an enormous beehive with millions of sections each of which holds a snau bee malting honey. Be aware, too, of the Archangelic Intelligence as having tremendous protection, love and devotion for each and every creature on the earth because each creature is part of earth and as being able to guide each one of you either indirectly through the Planetary Being or directly if you have the right approach to him

and have earned and maintained the right of direct contact with him.

What is said here, however fanciful the expression may appear, is deeply real and worth the intensest consideration.

Ends...(begins).
